# flexmls *Tip!*

See All MLS Areas on Any Map in flexmls

Created January 2017

When you need to know which area or sub-area your listing falls into, the Overlays function will help you do just that.

To view MLS Areas on any map in the flexmls system, you can:

- Click the **Overlays** button at the top right corner of the map.
- Next, click on **MLS Areas**, which will add the boundaries to the map for all Areas, (not just the K Areas).
- Finally, you can **zoom** and **pan** the map using the arrows, **+ sign**, **- symbol**, and **gauge** located on the top left side of the map.
