

Cado Response

Most data is moving to the cloud. Cyber attackers are moving to the cloud. Yet digital forensics has not made this critical leap yet. As a result, when security teams need to investigate a threat in a modern environment, it's incredibly complex and time consuming.

The Cloud is Cloudy

Despite the benefits the cloud can offer, there is still a realistic fear that security incidents in cloud environments can be a financial, legal and technical minefield. When a cyber incident occurs in the cloud today, security analysts face a lose-lose decision:

- Close an incident without digging deeper than the surface level that's presented in a detection platform
- Rely on outdated tools, open-source platforms and spreadsheets to stitch together an investigation

Either way, hackers are slipping through the net.

It's Time to Uncomplicate the Cloud

Digital forensics in the cloud is finally here.

Cado Security provides the first and only cloud-native digital forensics platform. By automating data capture and processing across cloud and container environments, Cado Response enables security teams to investigate and respond to cyber incidents at cloud speed.

How it Works

Capture data in a single click

Process massive amounts of data in minutes

Enrich data with machine learning & threat intelligence

Key Benefits

Save Time

Drastically reduce the time and effort required to analyze a security incident by automating forensic data capture and processing across cloud and container environments.

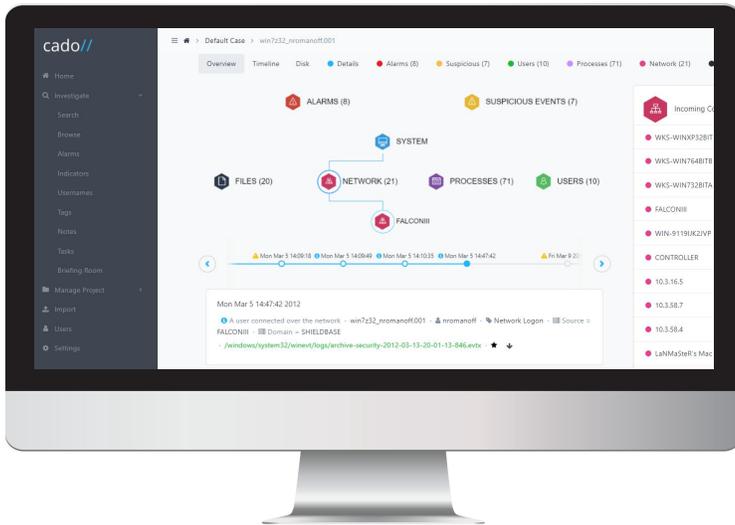

Reduce Risk

Minimize the impact of compromises and empower fully-informed decisions by quickly and precisely identifying the root cause of incidents.

Meet Legal & Regulatory Compliance

Meet compliance requirements for digital forensics investigations by capturing every bit and byte of information surrounding a security breach.

Cado Response Use Cases

Cloud Forensics

Cado Response makes it easy to conduct forensics investigations across complex and expansive cloud environments. Whether you have a single or multi-cloud approach, or your investigation spans countless regions, systems, and accounts, Cado Response delivers a centralized view of the data so you can immediately visualize incident timeline and scope.

Container Forensics

Cado Response is the only solution that enables forensic capture, processing and investigation of container environments and autoscaling groups. These resources grow, shrink and recycle data in a way that makes it almost impossible to investigate a potential breach. With Cado Response, you can capture incident data before it's gone.

Cloud Threat Hunting

The Cado response platform ensures organizations are protected even where an agent-based detection solution can't be deployed. For example, organizations often have zero visibility across high-availability production systems because deploying a collection agent can risk downtime. But because Cado Response is completely agentless, you can hunt across top cloud assets with zero impact.

Key Features

- Automate data capture across cloud and container environments
- Process massive amounts of data in minutes
- Analyze multiple data sources in aggregate including cloud provider logs, disk, memory and more
- Enhance incident investigations using machine learning, threat intelligence and built-in YARA rules
- Make the Cado Response platform your own with user-customizable rulesets and reporting
- Upload on-prem forensic data and take advantage of Cado's scalable architecture and processing engine
- Collaborate on single, or multiple investigations at once, from anywhere

“Cado is the only solution I know that supports Kubernetes and cloud. They're changing the way we do forensics.”

DFIR Director at a Top Global Consulting Firm

Cado Security provides the first and only cloud-native digital forensics platform for enterprises. By automating data capture and processing across cloud and container environments, Cado Response enables security teams to effectively investigate and respond to cyber incidents at cloud speed. Backed by Blossom Capital and Ten Eleven Ventures, Cado Security has offices in the United States and United Kingdom. For more information, please visit <https://www.cadosecurity.com/> or follow us on Twitter @cadosecurity.
