

Hello, Wi-Fi

Keep connected
with the Halo Pro
Long Range
Wi-Fi Extender

RedPort®

Hello, Wi-Fi

Keep connected with the Halo Pro
Long Range Wi-Fi Extender

RedPort®

With the **Halo Pro Long Range Wi-Fi Extender** you can easily capture and repeat distant Wi-Fi signals from the marina or campground back to your boat, RV or campsite.

Connect in More Places with Dual-band Wi-Fi

- Dual-band technology lets you connect to both common Wi-Fi frequency standards: 2.4 GHz and 5GHz.
- Connect multiple cell phones, tablets & laptops at the same time

Built for the outdoors

- Easy to install on standard antenna 1" 14TPI mounts
- Durable marine-grade materials withstand harsh conditions at sea or extended outdoor RV use

How Halo Works

Halo Pro's three components (antenna, Optimizer Wi-Fi router & app) work together to pull in a Wi-Fi signal from a remote source and broadcast it locally to your devices (smartphones, tablets, and laptops). The signal is then rebroadcast using the included Optimizer router hotspot.

Easy to connect your devices

- New user interface lets you easily manage your network and access login pages that require a username and password.
- Connect your devices to the included Optimizer router via Wi-Fi or Ethernet.
- Quickly and easily control your Halo system with the "Halo Wi-Fi" for Android and iOS apps

What's In the box

The Halo Pro Long Range Marine and RV Wi-Fi Extender System includes:

- RedPort Optimizer
- RedPort Halo Pro Wi-Fi Extender
- Antenna – 22", 9 dBi, 4W EIRP
