

**IMARC University's training programs have been developed to ensure clinical researchers understand the regulations and how to apply them using critical-thinking skills.** Our training staff brings a broad range of perspectives—with backgrounds ranging from nursing, engineering, medical technology, laboratory research and more—to their roles as research professionals.

Many have worked in the research industry for years as research coordinators, monitors, auditors and project managers, and bring a wide array of experiences to training programs.

Our training is ideal for clinical researchers in many roles at the Sponsor, CRO and Site levels, including; monitors, research coordinators, investigators, project managers, auditors, IRB staff, and other sponsor and vendor staff members.

## The Benefits of IMARC Training

IMARC training solutions are designed to provide you with a better understanding of your specific research setting and how it functions. These informative, interactive and inspirational solutions include:
