Up to 14"

ActiveHeight
(seat elevation)

Up to 45°

ActiveReach
(anterior tilt)

Fully programmable ActiveReach sequence

Tight position

Open position

Transfer position

Anywhere in between

Permobil's ActiveReach is available on all M and F-Series Corpus power wheelchairs

ActiveReach can be programmed with a custom sequence that works for your body and your daily needs.

Your world within reach

- Customizable ActiveReach sequences*
- Programmable footplate height in ActiveReach*
- Drive at walking speeds while fully elevated
- Drive while in ActiveReach
- Independently adjustable backrest and legrest angles in ActiveReach position

Ensure that the adjustability, stability and drive speeds in both seat elevation and ActiveReach will be functional for your daily life.

Quality from the ground up

- Base stability in sitting and ActiveReach positions
- Active suspension in all positions
- Bright, functional LED lighting included with a four-function chair
- Dedicated cable paths for cable protection & reliability

A solid foundation is key to stability, this is especially true in the ActiveReach and/or ActiveHeight positions. Make sure your wheelchair was designed from the beginning with these positions in mind.

Easily find your perfect position

- Save and recall memory seat positions
- Activate a preferred position in a way that works for you with programmable buttons on the joystick
- Smart actuators allow for display of live seat angles within MyPermobil app for real time seat position feedback
- 10° of ActiveReach included for no additional charge with ActiveHeight seat elevation

Your power seat functions should be programmable to provide you the best possible positioning in both sitting and ActiveReach.
