KINGLAND

Why Integral Companies Trust Kingland

Quick Facts
- Cloud agnostic platform.
- One of 55 global companies to hold CMMI Level 5 designation.
- Clients include FINRA CAT, DTCC, and more.

"Data protection is a central ingredient of our culture and worthy of our accelerated attention and investment."

Alex Olson
Executive Vice President, CSO
Kingland

About Kingland

Integral, data-intensive, and risk-conscious companies rely on tailored solutions inside the Kingland Platform. From the world's largest stock exchanges and financial institutions to Fortune 500 insurers and consumer goods retailers, essential firms use the Kingland Platform to transform their existing data into actionable insights.

Because clients cannot afford to make mistakes, the Kingland Platform applies accuracy to the organization, integration, and application of enormous client data within the enterprise.

Protecting you and your customers' data.

Guided by the ultimate goal of protecting clients and their data, Kingland has leaned on its process-oriented culture to develop data security and privacy measures in the Kingland Platform that are trusted by the most integral companies in the world.

Proven Track Record

Kingland has earned the most integral companies' trust and partnered with the largest institutions, infrastructures, and financial regulators, including DTCC and FINRA. We have shown the ability to meet the highest security standards for these firms.

Security in the Cloud

Kingland invests heavily in security and considers security an asset that its clients demand. Platform solutions are cloud-based, supporting AWS and Google Cloud environments. We understand how to integrate cloud-based security innovations from cloud providers. Our stringent security protocols ensure the cloud is safer than locally managed systems. We fortify our security foundation using many security measures from multi-factor authentication and an encrypt-everything approach. We invest millions each year focused on protecting customer data in a secure environment.

Security Achievements

Kingland is annually audited under AICPA SSAE 18 SOC 2 requirements, and we are informed by the National Institute of Standards and Technology (NIST) and ISO 27001 standards. A third party specializing in GDPR and other data privacy regimes assesses our data privacy practices. These requirements are the most stringent in the world. Our software development processes are Capability Maturity Model Integration (CMMI) Level 5 certified, one of only 55 companies in the world to hold this designation.
