CAUTION: ALWAYS INSTALL PRODUCT FROM LEFT TO RIGHT AND REMEMBER THAT POLYMER UNDERGOES EXPANSION/CONTRACTION DUE TO TEMPERATURE VARIATIONS. FOR A BETTER LOOK WE RECOMMEND TO INSTALL PANELS ON FLAT SURFACES (EX: PLYWOOD PANELS OR OSB PANELS). IF PANELS ARE INSTALLED ON A WALL WITH FURRINGS, FURRING STRIPS MUST BE INSTALLED ON A 45° ANGLE AND SPACED BY 8'' (20,32CM).

1. Install panels and space equally. Refer to temperature marks that show the outside temperature the closest to that during installation.

2. When using Novik corners:
   - When installing a cut panel, nail in its center as shown. When using a roofing nailer, adjust its tip at the highest position and the air pressure according to the substrate in order to leave the required gap.
   - When installing a full panel, nail in the center hole first.

3. For full length panel:
   - Maximum 16'' between each nails.

4. Block each panel at its center.

5. Install panels and space equally. Refer to temperature marks that show the outside temperature the closest to that during installation.

6. Alternate the joints between rows.

7. If you need to attach the siding in an area other than the installation hole, create a 1'' (2,54 cm) long slot to allow nailing. Always nail in the middle of the slot.

8. CORNER INSTALLATION:
   - For each nail, leave a gap between nail head and panel.
   - When using Novik corners:
     - When used with NovikTrim1:
       - Block each panel at its center.
       - For each nail:
         - Roofing nailer compatible*

   * Roofing nailer as Bostitch RN46 and Hitachi NV45.

See www.TandoBP.com for the complete installation guide.
