

Z14

Clocking in and out using a proximity or swipe card is much faster than entering codes, which saves exponentially more time the larger your workforce is.

In proximity mode, your employees don't have to touch the keypad, making the Z14 more hygienic and sanitary than time clocks that require physical contact. It's also ideal for employees who must wear gloves or protective equipment.

Instead of chasing down time cards and correcting errors, let the Z14 import employee time into our cloud-based time and attendance system. Your managers can then approve digital time cards in bulk.

The Z14 is so cost-effective, you can set one up wherever you have employees clocking in and out.

Find out how much time your organization can save with a proximity or swipe card time clock.

Proximity or Magstripe

Large groups of employees can punch in and out quickly

The Z14 ensures employees can punch in and out quickly without entering codes when they use proximity or swipe cards.

The Z14 sends data over Ethernet to your central system so your staff can easily manage employee time and attendance information from an unlimited number of clocks.

- ✓ Proximity or magstripe card
- ✓ Optional punch in or out using employee PIN
- ✓ Simple wall mount
- ✓ Mango HID card compatible
- ✓ Easy-to-read large clock display
- ✓ Ethernet connectivity
- ✓ Card is easily deactivated if it is lost
- ✓ Custom card or badge printing
