

Biometric Clock

The most affordable and durable timeclocks with accurate on-screen fingerprint identification and security

The Z33 and Z34 time clocks are tough and secure. They show the fingerprint on the screen so employees can easily position their finger and punch in or out quickly. These clocks also match the fingerprint to the employee's PIN to prevent employee time fraud.

- ✓ **Biometric fingerprint scanner**
- ✓ **PIN entry adds a level of security**
- ✓ **On-screen finger placement verification for quick punches**
- ✓ **Non-gel for durability even with large workforces**
- ✓ **Rounded Z33 or square Z34 design**
- ✓ **Ethernet data transmission for efficient central management**
- ✓ **Wall mount option**

Z33 and Z34

The Z33 and Z34 non-gel fingerprint sensors are durable, making them ideal for large workforces and multiple daily shift changes.

The Z33 and Z34 are two of the most affordable biometric time clocks. These models have a fingerprint reader and a PIN pad, so you can combine the fingerprint scan with the employee's PIN to make buddy punching virtually impossible.

Unlike other fingerprint scanners, these clocks provide on-screen fingerprint verification, so employees can easily adjust their finger for a quick and accurate scan.

The differences between the Z33 and Z34 are aesthetics and security. The Z33 has rounded corners, and the Z34 is more square. The Z34 also includes a more secure mounting bracket.

Find out how you can affordably add durable and secure time clocks to your workplace.
