

Product Brief

BlazeMeter® Continuous Testing Platform Shift-Left Intelligent Test Automation

Testing Rebooted

Your business needs to deliver innovation faster and with higher quality. Digital transformation and agility are key, but how? The BlazeMeter® Continuous Testing Platform eliminates testing delays and helps transform your Center of Excellence (CoE).

The BlazeMeter Continuous Testing Platform is a unified, end-to-end, next-generation software test automation platform built for the Agile and DevOps era. The BlazeMeter Continuous Testing Platform harnesses the power of cloud and open source to deliver an easy-to-use, developer-friendly, intelligent, Shift-Left test automation solution. Your enterprise can build the highest quality software, maximize development velocity, and minimize risks and costs with the BlazeMeter Continuous Testing Platform.

Continuous Testing Delivered

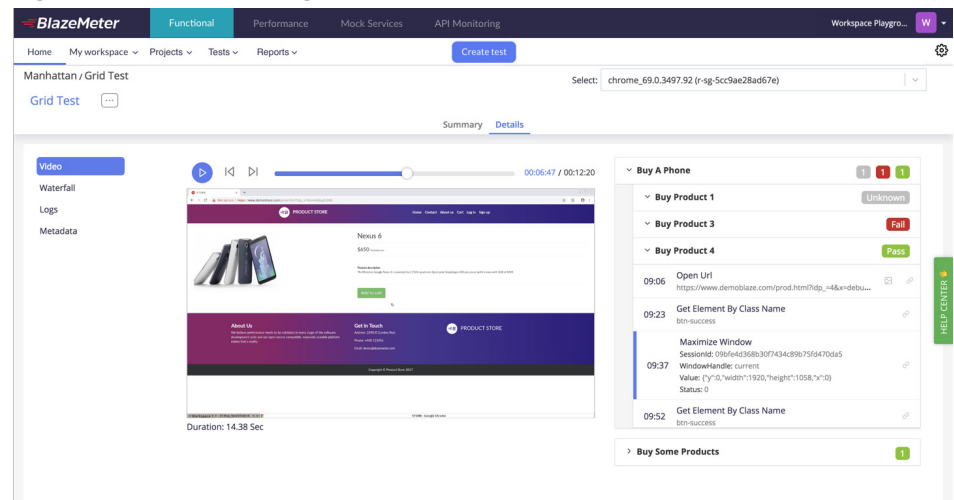

- Complete, integrated continuous testing platform
- Web-scale testing out of the box includes:
 - UI and Functional user experience
 - Performance
 - Mock services
 - API testing and monitoring
- SaaS or Private Cloud
- Scriptless test creation
- Mock services shared and reused from a virtual catalogue
- Features are available as code or through a lightweight UI
- 100% open source compatible

Smart Continuous Testing

The BlazeMeter Continuous Testing Platform leverages Shift-Left capabilities, open-source compatibility, and a robust SaaS infrastructure to help incorporate testing as a fundamental and ongoing activity within your software development lifecycle. The BlazeMeter Continuous Testing Platform includes complete continuous testing capabilities, deeply integrated in a single intuitive workflow. Even more, the BlazeMeter Continuous Testing Platform is an open platform and works with existing third party or home-grown tools.

“I have been looking for a single end-to-end continuous testing solution for a long time.” - Large Energy Company

Figure 1: Continuous Testing

BlazeMeter Continuous Testing Platform

The BlazeMeter Continuous Testing Platform can help your organization shift quality left with a full set of continuous testing capabilities.

Scriptless Test Automation

Simplify test creation and maintenance with one recording that works for both functional and performance tests. And, you can even use that script for monitoring. *One script to record—One script to maintain—No need to write scripts, ever!*

Unified Functional and Performance Testing

Get full visibility into your front-end user experience ahead of peak demand. Create one script for performance and functional UI testing to test your front end under load in the cloud, and scale up to 2 million virtual users. See combined reporting and quickly pinpoint problems.

Eliminate Environment Delays with Mock Services

Dependencies often impede the quality of testing that developers can perform. With mock services, you can virtualize and continue to test all parts of your system, in minutes, even if you don't have access to the full environment. Use open source tools, API specs, or UI and then reuse and share in a virtual catalog.

360° API Testing and Monitoring

APIs are the building blocks of modern applications. Test all your APIs in a single place—before and after production deployment. Easily create functional tests, run load tests, and deploy the same test scripts as synthetic monitors for continuous validation post production.

Compare the Features and Benefits

Features	and	Benefits
Everything you Need for Continuous Testing	↔	Nothing to Install, get Started Today
Use Your Own Tools and Open Source	↔	Work with the Tools Your Team Prefers
Integrates with on Premises Solutions	↔	Integrate Directly with Your CI/CD Toolchain
Testing for Mobile to Mainframe	↔	One Testing Platform Covers It All
Code or UI Testing	↔	Suitable for Both Developers and Testers
Supports your CoE Evolution	↔	A New Era for Continuous Testing
