

Predict Proficiency Level Gains and Student Progress with the Projected Growth Report

The *Projected Growth Report* enables educators to:

- ✓ Identify students who are on track to reach their end-of-year goals.
- ✓ Inform decisions about how to support students who are at risk of not reaching their goals.
- ✓ Determine which students are using Reading Plus with fidelity.

The *Projected Growth Report* is available at the student and class level and includes powerful data regarding students' predicted end-of-year proficiency level outcomes based on initial assessment data, program use, and continuing performance.

The *Class Projected Growth Report* enables educators to identify which students are making expected growth in Reading Plus. In the *Student Projected Growth Report*, educators can view an individual student's projected proficiency level for the end of a school year. Projections are updated in real-time as students use the program, ensuring that educators receive actionable data reflecting students' growth.

Support for Your RTI/MTSS Model

Educators can use the *Projected Growth Report* as part of a comprehensive response-to-intervention (RTI) process that examines whether a student is making expected growth on a regular basis. Reading Plus supports RTI and MTSS models to align with the needs of your classroom. Students who use Reading Plus with fidelity make significant gains in just 40-60 hours of instruction.
