Orchestrate application release at pace

Delivering and releasing technology means consistently executing change effectively, day in and day out.

There are two key obstacles to regular technology change, like application release: lack of visibility, and business continuity disruption throughout change activities. This can lead to damaging delays, regular rollbacks, outages, and a high rate of change failure.

Release deployments are a multiplayer event, involving team and technology complexities that cannot be addressed with CI/CD solutions alone. Cutover offers a single platform for end to end coordination, visibility, and control, expanding the value of your existing release management toolset.

The platform orchestrates across your existing release ecosystem, enabling process standardization, removing change execution risk, and uniting technical and non-technical teams to bridge gaps, reduce friction, and accelerate speed to market.

> " Cutover has a great product that has been used extensively across the Barclays Payments estate and has played a key part in numerous successful complex technology implementations.

Deliver seamless technology and release orchestration

We help our clients to manage application release orchestration on a continuous basis and execute change more intelligently.

The Cutover platform enables you to orchestrate work end to end across your teams and technologies in dynamic, automated runbooks. By turning complex activities into well-orchestrated, repeatable flows of work, Cutover enables effective, repeatable, seamless release orchestration across the organization.

Achieve total visibility and control

Enterprise and business unit oversight and management of release orchestration

Transparency is key to successful delivery and release. Cutover enables leaders to have full visibility of all application release orchestration across the enterprise in a single view, with the ability to dive deeper for more detailed information.

Cross-functional collaboration and communications

Delivery and release events often involve coordinating multiple teams, requiring many threads of communication. Cutover streamlines cross-functional collaboration and centralizes communications, enabling teams to be more productive and better informed, and mobilize faster.

Why partner with Cutover

Cutover is helping some of the largest, most complex organizations in the world to navigate a change-driven economy. Built with decades of experience in managing operational resilience, application release orchestration, cloud migration, and platform implementation, the Cutover platform enables organizations to move quickly with confidence.

Cutover benefits

◆ Identify and eliminate potential risks earlier with enterprise-wide visibility

◆ Collaborate effectively across remote teams, silos, and geographies

◆ Reduce the complexity of software-driven change

◆ Improve internal planning and processes through reporting, audit, and analytics

◆ Deliver change at speed through better orchestration of human and machine workstreams processes

◆ Enhance your investments in service management, DevOps and collaboration tools

◆ Eliminate release regression and reduce release duration

◆ Free up people to focus on higher-value activities rather than administrative tasks
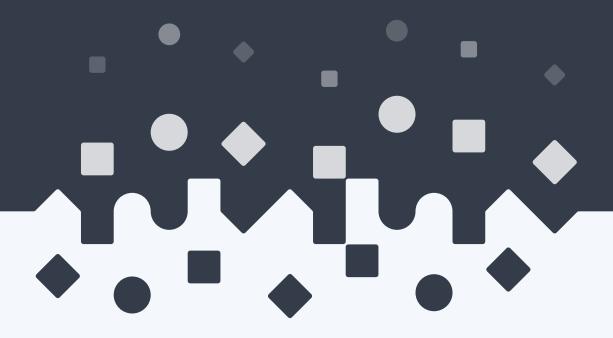

Our Clients

Cutover is trusted by well-known financial institutions all over the world, including leading global banks, two of the top three US banks by size, and three of the top five investment banks globally.
