Maintain operational resilience

Sustaining core business services during 'business as usual', as well as during times of operational stress or disruption, is critical for resilience.

Many major companies still rely on outdated, complex, and siloed resilience processes, often using static documents to create, test, and run recovery plans. The fast pace of technology evolution means that these processes are no longer advanced enough to manage the landscape of complex change.

A dynamic solution is needed to ensure that organizations can quickly and accurately test resilience, as well as respond and recover quickly when an incident occurs.

"

Cutover is enabling us to realize our strategic migration goals while ensuring operational resilience reporting and playbook invocation, which is an indication of their commitment to supporting our business.

Will Westwick
CTO of Enterprise
Technology at Barclays.

Work Orchestration and Observability for operational resilience

Cutover is the only platform that allows you to plan, orchestrate, and analyze resilience activities involving both humans and technology. By turning complex activities into well-orchestrated, repeatable flows of work, Cutover enables you to run, automate, and repeat crucial resilience activities quickly and efficiently. Organizations can leverage the Cutover platform for hosting executable recovery plans, managing and executing the test schedule, and providing operational visibility of high-risk change.

Clients of Cutover leverage the platform to manage critical operational resilience initiatives, such as:

Service/application resilience testing and invocation

Repetitive events, such as building power-downs

Data center failover testing

Production failover

Audit and regulation

Why partner with Cutover?

As a leader in Work Orchestration and Observability, Cutover is helping some of the largest, most complex organizations in the world maintain resilience in a change-driven economy. The Cutover platform, developed with decades of experience in managing operational resilience, transformation, and technology delivery and release initiatives,enables organizations to move quickly with confidence.

Cutover benefits

◆ Easily prepare, find, and manage recovery plans

◆ Manage long-term test planning

◆ Proactively identify change activity that could risk resilience

◆ Manage incidents with full team collaboration, visibility by leadership, and analytics to enable process reviews and optimization

◆ Enhance your investments in service management, DevOps and collaboration tools through seamless integration

◆ Enhance visibility for stakeholders through reporting, audit, and analytics capabilities

◆ Quickly deploy plans required to recover from an incident with structured human and machine activities

◆ Liberate your team from manual and administrative tasks to focus on higher-value activities

◆ Automatically generate an audit trail for the regulator
