## Supply Chain Management on Demand

uCommand® is a simple, versatile and easy-to-use Supplies Management System designed to maintain, manage and update all types of products as well as control ordering. uCommand® isolates the normal day-to-day use of supplies from the overall processes of maintaining items and on hand quantities of supplies. By taking this approach, the job of tracking supplies and services used becomes infinitely more simple allowing staff to focus on their primary job.

Maintenance within the program, for supplies and users are all managed from a single location. The inherent flexibility of the system allows for suppliers, barcodes, units of measure or pricing groups.

## Advantages

- Web-Based
- Management Approval
- Inventory Management and Tracking
- Export Charges (LTC)
- Wireless Scanning
- Reporting
- Multiple Vendors
- Network Environment
- EDI Ordering
