

How do you communicate your lab's safety program to employees?

There's no better time than now to properly train your work family by an expert familiar with health and safety in a dental lab work environment including COVID-19 infection control. A virtual safety training is a contactless approach for the lab's team to recognize and protect workers from the most common safety & health hazards in their work environment.

Virtual Health & Safety Training for the Dental Laboratory

Why should the dental laboratory choose this virtual training?

- Assists with OSHA's training requirements and CDC guidelines including infection control
- Customized and delivered contactless in the comfort of client's own environment
- Delivery method options are: 1) a private live webinar setting with a recording available for up to one from live training date or 2) a prerecorded training available online 24/7 for up to one month
- Training is typically half hour to one hour in length and utilizes colorful presentations
- Includes OSHA-required training documentation & CE credit
- Training covers current topics, such as, Bloodborne Pathogens - Exposure control/Infection Control practices, COVID-19 Infectious Disease Preparedness and Response Plan, Personal protective equipment requirements
- Additional topics covered as they apply to the lab include Chemical safety/hazard communication, Emergency planning & procedures, Ergonomics, Electrical issues/lockout-tagout, Equipment safety, Workplace Violence, Injury & Illness reporting, plus more
