

How do you communicate your safety program to your dental team?

There's no better time than now to properly train your work family by an expert familiar with COVID-19 infection control and safety in a dental practice work environment. A virtual safety training is a contactless approach for the practice's team to recognize and protect workers & patients from the most common safety & health hazards in the dental practice environment.

Virtual Dental Practice Health & Safety Training

Why should the dental practice choose this virtual training?

- Assists with OSHA's training requirements and CDC guidelines including infection control
- Customized and delivered contactless in the comfort of your own environment
- Delivery method options are: 1) a private live webinar setting with a recording available for up to one from live training date or 2) a prerecorded training available online 24/7 for up to one month
- Training is typically half hour to one and half hours in length and utilizes colorful presentations
- Includes OSHA-required training documentation & CE credit
- Training covers current topics, such as, Bloodborne Pathogens - Exposure control/Infection Control practices, COVID-19 Infectious Disease Preparedness and Response Plan, Personal protective equipment requirements
- Additional topics covered as they apply to dentistry include Chemical safety/hazard communication, Radiation safety, Anesthetic, Medical gases, Emergency planning & procedures, Ergonomics, Equipment & electrical safety, Workplace Violence, Injury & Illness reporting, plus more
