# Cloud Transformation Insights

**Cloud Transformation Insights is a complimentary service from ANS which builds upon the AWS account team's engagement to provide additional insights, information and value to accelerate your cloud transformation project.**

Using TSO-Logic and Cloud Chomp, the AWS team will provide you will insightful and valuable information such as the ongoing run costs of your applications in cloud, but in order to have the best opportunity for success in cloud, you will need to consider the output of this assessment alongside your specific business needs, objectives and timescales.

For instance, you may need to build a comprehensive business case to secure budget sign off, you may want a better technical understanding of what applications you can rearchitect, or you may have questions around cost avoidance, migration timescales or target operating model – which is exactly where our Cloud Transformation Insights service can help.

## The service can help you to:

### Build a business case

We'll take the information provided by the TSO-Logic and Cloud Chomp and work with you to build a high level TCO comparison into your existing operating model to get you to the next phase of the project.

### Create a roadmap for your applications

We'll work with you to understand exactly what you can do with each application and when you should do it, whether that be rehosting, refactoring, re-platforming or retiring.

### Adopt a high-level transition plan

We'll tell you how long it will take to complete a data centre transformation into cloud along with outlining the key phases along the way. We'll also take into consideration business commitments, requirements and mandatory timelines.

### Receive a benefits breakdown

We'll show you exactly what you can expect to gain from your cloud transformation, whether it'll help you make cost savings, deliver a better service to your customers, improve efficiencies or increase your uptime and performance.

### Understand your options

We know that understanding your options from a commercial perspective is crucial so we'll show you if a cloud environment could be more efficient than your current operating model or any alternatives you may be considering.

### Define your operating model

Moving to cloud is just the beginning so we'll work with you to establish your needs moving forwards, whether you need training, support in restructuring your teams or help in building out your capability to develop, manage and operate your new cloud environment.
