McCain BACKPLATES

STANDARD AND PROGRAMMABLE SIGNAL HEADS

McCain Backplates provide a visual contrast between signal heads and the environment, enhancing signal visibility. Available for standard and programmable signal heads in eight and twelve inch sizes, McCain Backplates can be configured for one to five section, HAWK (3-section cluster), doghouse (5-section cluster), or combination signals. Available in a variety of standard and custom colors to match the signal head, McCain Backplates provide an aesthetically pleasing and functional look for your intersection.

High performance; 5", louvered

Standard; 8", non-louvered

Standard; 5", louvered

KEY BENEFITS

- Enhances signal visibility by creating an environmental contrast
- Compatible with standard and programmable signal heads
- Available in a multitude of configurations
- 5" or 8" borders
- Standard and custom color options

PRODUCT DESCRIPTION

The McCain Backplate collection is ideal for use in conjunction with standard or programmable signal heads. McCain Backplates are available in several types including aluminum, ABS sheet, and vacuum-formed ABS, and the aluminum is available in a louvered style. Vacuum-formed McCain Backplates incorporate a 1/2" lip for added strength.

All McCain Backplates are available with five or eight inch borders. Mounting methods vary depending on the backplate type.

Every backplate has a flat black front face for increased visual contrast against the background. The back face is available in a variety of colors to match your current signal housing.
