

AI-Powered Policy Checking for Commercial Insurance Carriers

Automate and Verify Policies in Minutes

Deliver high-quality, accurate documents the first time by automating and streamlining the policy checking process. Cross-reference and verify all documents at once to validate accuracy before distributing new policies to distribution partners. Be the carrier that brokers and agents count on for speed and accuracy by delivering pre-checked and validated insurance policies.

How It Works

Chisel AI's Natural Language Processing (NLP) and Machine Learning platform can read, extract, classify, and analyze policy-level data trapped in digital insurance documents hundreds of times faster than a human. NLP is a machine's ability to read like a human, pulling relevant pieces of information, assigning value to the words, and intelligently analyzing structured and unstructured text. Chisel AI is unique in its ability to recognize insurance-specific data points such as policy number, producer code, named insured, street address, city, state, zip code, policy term, limits, premiums, deductibles, schedule of forms, endorsements, and more.

With Chisel AI, carriers can digitally compare insurance documents of different lengths and formats such as a new policy, quote, binder, and existing policy to quickly identify errors and omissions. Our out-of-the-box, on-screen policy checklist identifies potential errors and omissions such as missing endorsements, incorrect limits, address errors, or premium shortfalls in minutes, eliminating the need for skilled knowledge workers to spend countless hours manually reviewing lengthy and complex documents. Chisel AI's automated solution frees up staff to focus on doing what they do best – assessing new risks, writing more business, and nurturing distribution relationships.

The easy-to-use graphical interface allows staff to review findings and automatically identify inaccuracies accompanied with notations that can be downloaded in a summary PDF and shared for timely resolution. With Chisel AI, carriers can improve contract certainty and data hygiene by reducing the need for lengthy back and forth email exchanges and save time previously spent responding to requests for corrections and updates by automatically identifying potential errors and omissions before delivering new policies to distributors.

Business Benefits

- ◆ Automate & Standardize Policy Verification
- ◆ Enhance Contract Certainty
- ◆ Improve Data Hygiene
- ◆ Accelerate Policy Delivery Times
- ◆ Achieve Customer Excellence
- ◆ Increase Profit Margins
- ◆ Enhance Operational Efficiency

Key Features

SaaS-Based – Chisel AI is hosted in the cloud on Amazon Web Services (AWS). Trusted and used by many Fortune 500 firms, AWS is certified by ISO, PCI and AICPA and supports many of the standards issued by ISO, PCI and ACIPA including ISO27001 and Level 3 SOC.

Real-Time Data Extraction – Designed for commercial insurance and trained on insurance data models, our machine learning and natural language processing solution reads and extracts unstructured data from policies, endorsements, and quotes in various formats such as PDF, Word, and Excel hundreds of times faster than a human. It can contextually understand data locked away in insurance documents no matter where it appears in a document. Extracted data can be provided in XML, JSON, CSV, Word, or Excel file formats.

Predefined Checklist – Use the predefined checklist available out-of-the-box with over 20 of the most common checks, or build your own checklist.

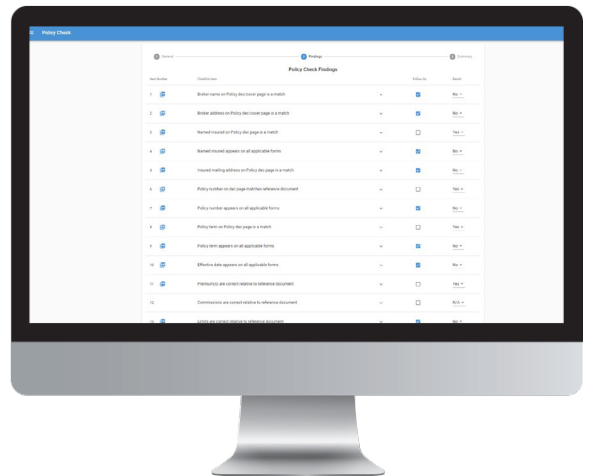

Side by Side On-Screen Comparison – Color coding indicates errors, where the information was found, and what the policy information should convey. For example, yellow highlights where the information was found, red highlights errors or mistakes, and green highlights what the policy information should convey.

On-Screen Visualization – Simple-to-use graphical interface makes it easy to quickly see errors and omissions at a glance, view findings including a summary of actions required, and download policies and checklists.

Format Agnostic – Document comparison is available across multiple unstructured data formats i.e., Word, PDF, Excel, etc.

E&O Summary – Provides an automated summary of the items that need to be addressed in the policy for contract certainty.

Audit Trail – Keeps track of errors and omissions identified and corrected, along with timestamps and sign offs from the account manager, broker, admin and more.
