# Deako Simple Motion Switch

Occupancy motion sensor light switch, pir infrared motion activated wall switch

This sensor is a simple way to save energy and add easy automation to any room of your home, turning lights on when you enter the room and off after a set amount of time. You can install one sensor in the laundry room and one in the bathroom for total convenience and energy savings. The sensor works with any bulb type, including CFL and LED.

## Features

- Automatically turn the lights on when you enter the room and off when you leave
- In Occupancy mode, the light will turn on automatically when you enter the room; the light will then turn off automatically after no motion is detected for a set amount of time (5 or 20 minutes)
- In Vacancy mode, the light is turned on manually (by pressing the switch) but turns off automatically after no motion is detected for a set amount of time (5 or 20 minutes)
- The light can be turned on or off manually by pressing the main button on the switch
- The switch has two automatic timer settings: 5 and 20 minutes
- Single-pole only; great for small rooms like kitchens, laundry rooms and closets
- California Title 24 compliant

## Applications

- Pull your car into a lit garage
- Enter any room without fumbling with lights, like the pantry when your arms are full of groceries
- Leave the house with confidence knowing the kids' lights are off
- Ditch the frustration of coming home to the bathroom fan still on
- Move through a well-lit home without touching a light switch
- Reduce energy consumption with simple automation

**Specifications**
