

Estimator

Allow Estimators to have the flexibility needs to enter estimates, bids, and supporting documentation directly into a ProPricer proposal from any location.

Collaboration has Never Been Easier

Estimators, Reviewers, and Managers can communicate with each other directly in the application. Item-specific news feeds, questions, comments, and peer reviews can be written directly within the tool, eliminating the need to track multiple email chains or conversations that take place elsewhere.

Input Estimates in a Secure, Role-Based Environment

ProPricer Estimator makes security easy to manage. Assign the users you would like to have access in the system, and then easily set administration status. Once a user no longer needs or should have access, simply disable the user account with just a few mouse clicks.

Analyze and Adjust Estimates Exactly How and Where It is Needed

Slice and dice data to fit any needs with Pivot Grid and Summary View. "What-Ifs" offer quick ways to manipulate inputs without having to go down to the input level to make those changes.

Import Approved Estimates Directly Into Your Cost Proposal

ProPricer software replaces homegrown and excel-based pricing tools. ProPricer's Estimator is compatible with your current installation of ProPricer. Estimators can easily submit bids and documentation for review in seconds.

Key Benefits

- Workflow and Collaboration
- Access Tags
- What-Ifs
- Pivot Grids and Reports
