

Txture Cloud Transformation

Powering your cloud transformation from beginning to end

Txture is a cloud transformation and application portfolio solution for the Cloud Center of Excellence, cloud consultancies and system integrators. With its knowledge base of over 250k cloud services and a large set of assessment rules Txture Cloud Transformation (CT) increases transformation speed and reduces costs and associated migration risks. Txture CT serves as a single source of truth for hybrid-cloud landscapes, providing essential transparency regardless of deployment location or cloud provider on the entire cloud journey.

Product Facts

25k+ Applications Assessed

9 Cloud Providers

250k+ Product Variants

“Consider at an early stage how and where you can save costs on your journey to the cloud in order to make the migration a long-term success on a financial level as well.”

Key Use-Cases

Cloud Transformation Scenario Simulation

enables you to compare migration scenarios for your entire application portfolio based on financial and technical requirements.

Cloud Transformation Business Case Calculation

allows you to compare current expenses — both cloud and on-premise — to alternative deployment options in the public cloud or your private cloud.

Cloud Application (Readiness) Assessment

supports you in gathering information on applications and their technology stack in order to evaluate technical cloud readiness, cloud business value, and migration risk.

Migration Strategy (6R) Decision Making

allows you to make migration decisions based on your cloud strategy and helps with rationalizing your application portfolio.

Cloud Target Architecture Comparison

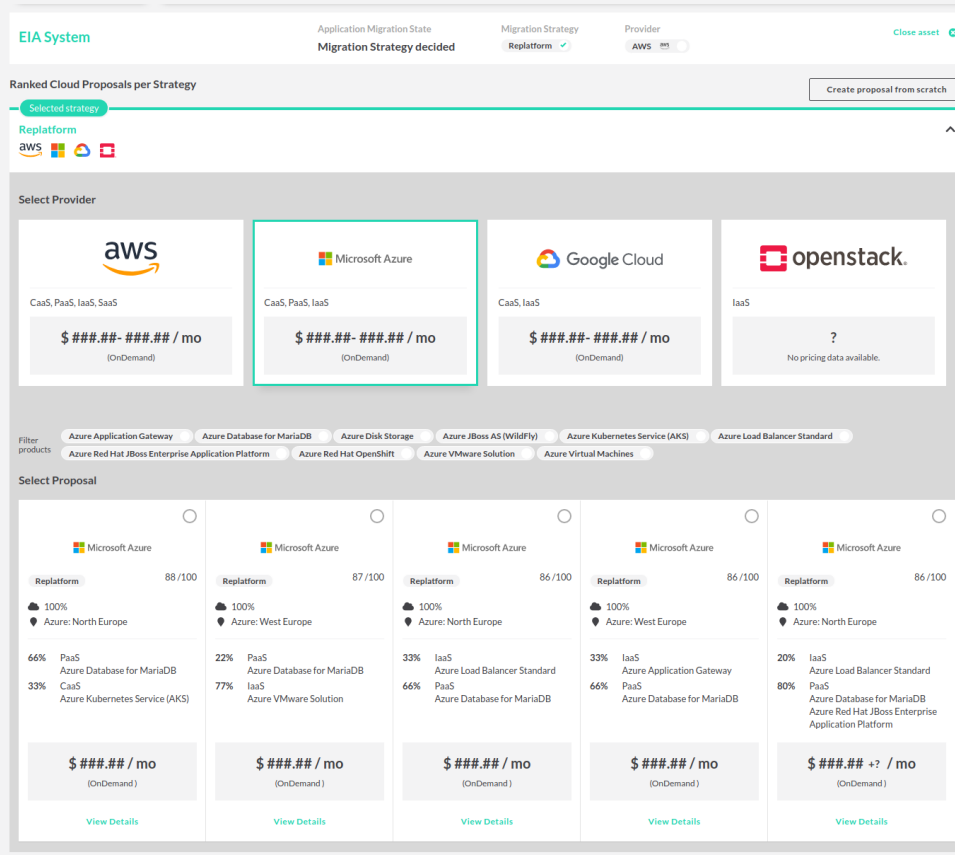

assists you in creating target architectures with selected cloud providers for your preferred migration strategies, such as replatforming, containerization, or SaaSification.

Migration Roadmap Planning

enables you to plan your migration in waves and shortens the overall migration timeline.

Cloud to Cloud Transformations

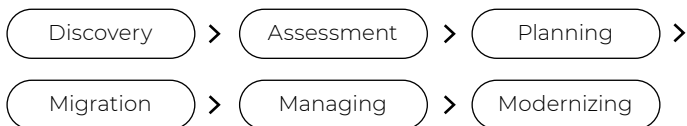

enables you to calculate business cases for re-platforming your applications or moving them to a different provider. This helps you to quickly identify your cost optimization and modernization potential.

How does it work?

Ttexture CT analyzes existing IT system landscapes in order to identify and implement the right migration and modernization approach (6Rs) taking each application's business, security, compliance, and technical requirements into account.

It covers the entire cloud transformation journey:

Ttexture's cloud knowledge engine calculates the cloud readiness score, business case, and target architectures based on your own cloud strategy. During and after the transformation, Ttexture reports transformation progress and helps you to manage and (cost) optimize your multi-cloud and hybrid IT landscape.

Benefits

Reduced Migration Risk

Reduced Costs

Increased Transformation Speed

End-to-End Standardized Process

Cloud Compliance

Transparent Transformation Process

Unified Solution
