## Bringing light to life has been our passion for 80 years.

### So, why skylights?

In 1941 in the Danish city of Copenhagen, a young engineer came up with the idea to transform dark, empty attics into bright living spaces. This idea developed into the first handcrafted, no-leak roof window, which became the foundation for VELUX to grow into the number one skylight company in the world.

At VELUX, we believe homes full of light are homes that are full of life, that daylight is powerful and fresh air is invigorating. Together, they improve our general health and well-being, decrease our dependence on electricity, and give functionality back to our space. Able to fit just about anywhere in your home, VELUX skylights deliver unmatched quality, beautiful results, and a brighter home for your family.

We often ask, "Why skylights?" But with endless reasons to install one, the question becomes more, "Why not skylights?"

# Skylights Made for Florida and the Gulf Coast

## WEATHERS THE WEATHER — WHATEVER THAT WEATHER MAY BE!

From hurricanes to sunny days, the Florida and Gulf Coast region is the ultimate challenge for any skylight. Except VELUX. Through extensive product research and development and countless product testing, these handcrafted skylights are designed to withstand the elements.

## The Glass in Our Skylights

### LoE³-340 Glass

We specifically picked LoE³-340 glass for our skylights installed in the Florida and the Gulf Region because of the glass' unprecedented design and superior performance.

LoE³-340 glass provides optimal year-round comfort for your home located in the sunny coast. This glass features a low SHGC (Solar Heat Gain Coefficient) which greatly reduces oppressive solar heat gain without compromising on clear sky views. Even more, because of its top solar

control, glare and fading in your home is minimized and almost eliminated. And if concerned about heat loss in the cooler months, LoE³-340 glass has a low U-Factor that prevents heat from escaping through the pane.

Upgrade your LoE³-340 glass with Laminated LoE³-340 Sun Protection Hurricane Glass, made to weather the weather - whatever that weather may be!

### Understanding Sun Protection LoE³-340 Glass

#### Solar Heat Gain Coefficient

is the level of solar heat blocked by the skylight. A lower SHGC means less heat is transmitted into your home.

**LoE³-340 SHGC 0.18**

#### Ultraviolet Light (UV)

is the energy measurement associated with fading materials and furnishings. A lower UV is best.

**LoE³-340 UV 0.20**

#### Light to Solar Gain (LSG)

is the ratio of visible light transmittance to SHGC. A higher LSG is better for controlled light transmittance.

**LoE³-340 LSG 2.17**
