DATA ENGINEERING

Our team of talented tech professionals add value to your company's most important projects. Some of their areas of focus include: Data Lake Ingestion, AWS, Azure, GCP, ETL and ELT Development, Data Modeling and Data Architecture, Data Warehouse Design, Modern Data Architecture.

METHODOLOGY & APPROACH

Vaco has worked with clients of varying sizes (including Google) across the globe to deliver outsourced managed services support. We utilize best practices and processes from these engagements, which accelerates the time to value for all engagements.

Collaboratively Establish the initial set of Key Data Management Domains to focus on.

Intentionally Set priorities, communicate requirements, answer questions, and remove any blockers that exist which may hinder the process with key stakeholders.

Ensure that requirements and timelines are effectively communicated and understood.

Purposefully Screen Vaco's Data Management consultants for both client culture fit and technical experience with specific tools and data disciplines needed for the client.
