

LEVEL: Beginner to Intermediate (3)

DURATION: 1/2 Day

Pre-requisites

{shiny}, and package development basics. Beginner to intermediate {shiny} developers, not using {golem}

Overview

You've been hearing about {golem} but still don't know exactly how to get started? Then you've come to the right place!

During this workshop, Colin will give you the keys to get started with {golem}, so that you can now start your next {shiny} application on solid ground.

This workshop is designed for {shiny} developers who want to understand and master {golem} philosophy and general structure, and to learn the best practices for building {shiny} applications that will be sent to production.

Trainer

Colin FAY works at ThinkR, a french agency focused on everything R-related.

During the day, he helps companies with their R needs, provides training (from beginner to expert), creates tools (packages, web apps...) and builds infrastructure. His main areas of expertise are data & software engineering, back-end & infrastructure, and R in production.

During the night, Colin is also an hyperactive open source developer and advocate. You can find a lot of his work on his GitHub account (<https://github.com/ColinFay>) and on ThinkR's account (<https://github.com/thinkr-open>). He is also active in the Data Science community in his home country (France) and worldwide, and an international speaker.

Workshop 3: Good practices for {shiny} development
using {golem} - An Introduction

Thursday 15th October 2020, 2pm-5pm BST
