A-SUITE

Frequently Asked Questions

How am I alerted about upcoming expirations?

A dashboard and email alert system make sure your team has plenty of time to update records before they expire.

Can I customize my alerts?

You can. Create various groups who get alerted at varying times. For example, a coordinator may get alerted 60 days in advance while the VP may only want to know 2 days in advance.

How are the DQ files built automatically?

As you complete each task in the hiring/onboarding process, a record is created. That record is set up to be stored in the appropriate folder. Picture your current manila folders for each driver, but digital.

How do I get the records in the system?

Text: you can text a driver to request a picture of their CDL or Med Card. The picture will be associated with that driver in the system for your review.

Upload: any document can be scanned and uploaded into the system.

How do I manage multiple jobs, locations and/or companies?

The A-Suite Comply module is flexible enough to build compliance rules based on your jobs, locations, companies, customers, or any custom field. For example, a Driver Trainee position may not require a CDL because s/he has yet to earn it. Or, California has a law you need to follow that your drivers in Texas do not.

How do I order and store MVRs and Background Checks?

You can order MVRs and Background Checks with a click in our system to our various partners that include: HireRight, Verified First, Accurate, and Asurint. You'll the PDF results stored in the system as you build the DQ file.

We have a ton of paper files, how can we get them into the system?

We have a team of professionals who can come to your office to scan, upload, and audit your files. Alternatively, you can do all or part of it yourself. There is a PDF splicer feature that makes uploading 200 pages per driver and splitting that PDF into 14 records very easy.
