

Isora GRC

# Demonstrate HIPAA Compliance with Confidence

Gain continuous risk visibility with a streamlined approach to risk assessment surveys.

## BENEFITS

- **Save time and resources.** Say goodbye to manual spreadsheet and email processes.
- **Start assessing immediately.** No need for complicated or costly software deployments.
- **Get a baseline of risks.** Efficiently aggregate compliance data and quantify risk.
- **Improve risk posture.** Identify, track, and mitigate critical risks year-over-year.

## CHALLENGE

Protected Health Data (PHI) lives everywhere across your healthcare organization. Your responsibility as part of the Health Insurance Portability and Accountability Act (HIPAA) is to safeguard that data at all costs. Unfortunately, healthcare organizations lack visibility. They don't actually know where their most critical risks exist or even how well their security measures are actually performing. In today's evolving cyber landscape, checking the HIPAA compliance box is simply not enough anymore. Data breaches are not only rampant in the healthcare industry but are the most costly, averaging \$7.13M in damages.

"For the tenth year in a row, healthcare continued to incur the highest average breach costs at \$7.13 million — a 10.5% increase over the 2019 study."

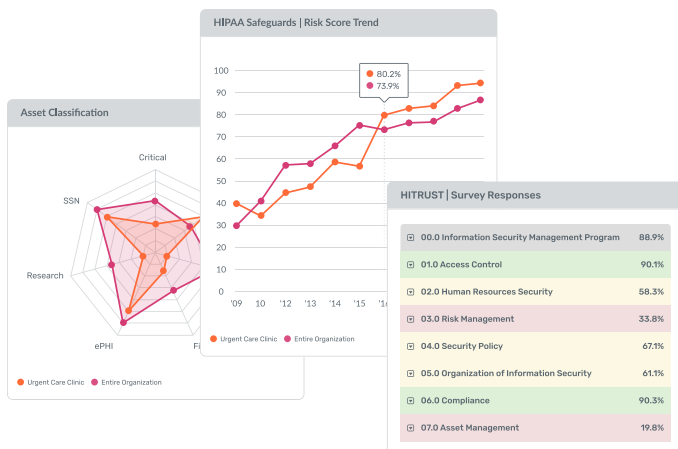

IBM Security 2020 Cost of a Data Breach Report

How confident are you in your current risk data? Do you have an efficient and effective method for collecting, analyzing, and quantifying risks? You need a turn-key solution that streamlines your risk assessment surveys to give you continuous risk visibility across your organization.

## SOLUTION

Isora GRC is the IT Governance, Risk, and Compliance (GRC) Surveying Platform. It enables your team to efficiently conduct risk assessment surveys across every angle of your organization. Leverage the preloaded question sets to launch campaigns against the HIPAA Safeguards, HITRUST CSF, or other popular frameworks. Aggregate survey data and quantify risk continuously.

## WHY SALTICLOUD

Our solutions were developed in the trenches for infosec professionals by infosec professionals. We are a Public Benefit Company with a dual mandate of public good and profit, focused on providing next-gen security automation technology to help organizations around the globe stay ahead of their cyber adversaries. Our solutions are currently at use at over 2,100 higher education institutions globally, including top research universities UC Berkeley, UT Austin, and others.

"We always advocate doing [risk assessments] internally with a little bit of outside help instead of just having one done by an outside firm. The reason why is you need to know your business well and where your holes are,"

**Mitchell Parker, CISO**  
Indiana University Health

Black Hat 2020 Session

Isora GRC gives you access to the data you need to optimize your security budgets, mitigate critical risks, and demonstrate compliance with confidence.
