

Workflow Platform for Business Processes

Your benefits

- End-to-end automation covering different business processes with shared base technology
- Guaranteed compatibility through SAP-certified workflows and interface
- Seamless integration — application in dedicated SAP name space, workflows based on SAP Business Workflow standard
- Reduced administrative effort through centralized administration of all workflows
- Transparency across all processes through the central workflow cockpit
- Easy adaptability of processes, thanks to the graphical Workflow Builder

xSuite Basic Module Cube

Automation, end-to-end

Relieving employees from routine tasks, avoiding manual work steps, simplifying and accelerating processes — these are the goals of business process automation today. Experience has shown that individual work steps and isolated solutions for sub-processes lead to complexity and slow down processes. The flip side of this is that diverse processes are most effectively automated when they are viewed as parts of a whole.

This is where the „xSuite Cube“ comes in. It brings together a diversity of workflow solutions for automating a broad range of business processes within SAP: requisition-note and purchase-order creation (SAP MM), incoming order-confirmation processing (SAP MM), vendor invoice verification (SAP MM, FI), vendor invoice verification for the public sector (SAP PS-M, PS-CD) and incoming sales-order processing (SAP SD). All these workflows are based on one and the same technology: that of the xSuite Basic Module Cube.

Workflow Builder

xSuite Cube provides work processes designed to fit your unique business needs. Our simple graphical Workflow Builder is the perfect tool for this, offering:

- Intuitive design with step-by-step wizard
- Workflows with steps that can be arranged individually
- Versioning
- Adjustment of work steps during live operation

Text system

xSuite's own text system offers the following functions:

- Translation of all xSuite elements into any language
- Use of company-specified terminology
- User-defined work-item texts
- Upload and download of Excel files

xSuite Objekttyp	Bezeichnung	Bereit	Wartend	Reserviert	In Arbeit	Fehler	Ausgeführt	Abgeschlo...	Log. gelös...	Unbekannt

01 xSuite Cockpit App

User management

Within the framework of the Basic technology, we offer user administration of our very own. Here's what's included:

- Integration of SAP, NON-SAP and LDAP users
- Group management defined according to company strategy
- Role allocation by user
- Substitute management for individual users and user roles
- Attributes provided for detailed user description — including company code, etc.
- Definition of password rules

Clearly structured cockpit

Our cockpit gives you an overview of all xSuite processes:

- Administration
- Logging
- Analysis

Licensing

The xSuite Basic Module Cube is available in two versions: One for SAP ERP and one for SAP S/4HANA. These licensed packages of the xSuite Basic Module Cube include the interface components Interface Mail, Interface Office+ and Interface WebScan. For details on the functionality of these components, see the description of the xSuite Interface Prism solution.
