

# Voyager Labs for Law Enforcement

A powerful platform for uncovering hidden relationships, assessing threats, and identifying the most promising leads in a criminal investigation.

At the heart of every inquiry or investigation is one simple fact: the answers exist. The challenge is finding them.

Voyager Labs provides a potent, field-tested platform that criminal investigators can use to help uncover those key answers and insights, allowing them to accomplish in minutes what might take months with traditional techniques.

In the course of investigations, analysts use Voyager Labs to develop more detailed pictures of individual persons of interest, map the membership of criminal organizations, connect seemingly separate crimes, reveal geographic links in drug and human trafficking cases, chart networks of connected individuals in intelligence operations, and more—all in a safe, anonymized browsing platform.

The key to these capabilities is a vast data landscape that hides potentially millions of leads and insights. Voyager Labs enables analysts to efficiently integrate open, deep and dark web data with other internal data sources. Fully compliant with privacy standards, Voyager Labs enables users to specifically characterize data access based on their internal policies and authorizations. In the hands of experienced investigators, VoyagerAnalytics is a powerful lens that can find hidden answers and make them visible.

---

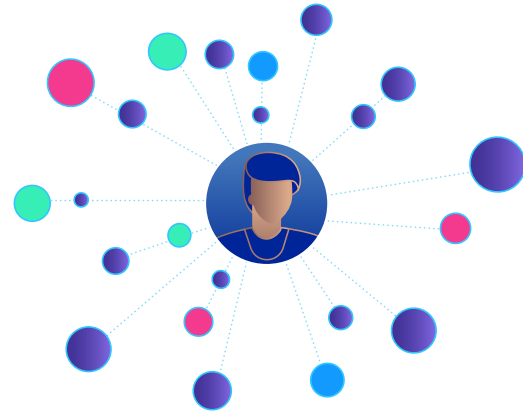

## Why Voyager Labs?

- Efficiently tap an incredibly rich, largely unexploited data source where criminals often reveal much more than they intend
  - Develop deeper, more complete profiles of suspects and their patterns, locations, and associates
  - Analyze key relationships that aren't visible in any other data sources
  - Piece together networks and affiliations in minutes instead of weeks
  - Map geographic locations, relationships and patterns in dispersed criminal enterprises
  - Get your entire team up and running quickly
-

# Solutions for Criminal Investigations

## Criminal organizations

Investigators use Voyager Labs to find and identify members of criminal organizations and gain insights into their activities and locations. Voyager Labs enables investigators to reveal an organization's structure, making it easier to identify its leaders and greatly increase the chances of dismantling the entire enterprise. The platform's ability to reveal indirect relationships can be especially useful in finding unknown members who may be taking steps to conceal their public footprint. Conversely, in cases where gang members are prone to broadcasting their activities to gain stature, Voyager Labs provides investigators with an unmatched ability to find incriminating online declarations.

## Investigation acceleration

Applying unstructured content analysis to investigations is often a manual, overwhelming, and frustrating process, requiring long hours of content review and cross-checking disparate data silos. Voyager Labs reinvents how investigators perform content analysis, generating automated, valuable insights across unstructured data sources. This significantly accelerates investigations, increases productivity, and enables the reviving of investigations that may have reached a dead end.

## Counter-terrorism

The way extremist and terrorist groups use the online world for recruiting, networking, and advancing their ideologies is well known. In fact, these activities require such groups to make much of their information publicly accessible, with low privacy settings. Voyager Labs gives counter-terrorism investigators a powerful platform for discovering, visualizing, and charting online extremist activity, from members to supporters to financiers.

## Narcotics and other trafficking

Both drug and human trafficking invariably involve networks of individuals acting in concert. Investigators use Voyager Labs' solution to help identify and chart the members and associates of these criminal networks.

## Near real-time crime response

When first responders' lives are on the line, it's critical to get them as much information as possible, as quickly as you can. Real-time crime centers were created to provide almost instant access to the full range of structured databases available to law enforcement. Voyager Labs adds a crucial missing piece: near-real time access to the huge mass of unstructured open, deep and dark web data and the information, patterns, and insights it contains.
