

the **ultimate** temperature monitoring system for medicinal products

pharmacy to ward
delivering the
highest levels of
compliance

quality & efficacy

Medicinal Products are subject to regular audits for compliance as an integral part of the inspection & regulatory process.

Temperature monitoring guidelines recommend that wherever Medicinal Products are stored, whether that be in the pharmacy, on hospital wards or in transit, they should meet recommended benchmarks that ensure that quality and efficacy are maintained.

- **MHRA, EMA, FDA compliant**
- **MKT - Mean Kinetic Temperature calculator**
- **Robust audit trail - CFR 21 Part 11 compliant**
- **Cross-site and multi-site connectivity**
- **Fully manned 24/7/365 alarm call centre**
- **Alarm and incident dashboards**
- **Web based, global access**

end to end monitoring from Tutela

To meet these benchmarks, a comprehensive system for temperature monitoring and accurate record-keeping across the complete cold chain, must be the cornerstone of the compliance strategy for any facility storing and issuing Medicinal Products.

designed for medicinal products

Tutela Genesis 3 is our most evolved wireless monitoring system for pharmacy inventory yet.

- Fully inclusive 12-month warranty
- Supports unlimited probes
- Automatic data retrieval and backfilling
- Self-healing network

From a standalone data logger for one refrigerator in a small pharmacy, to a fully integrated multi-fixture temperature monitoring system across multiple sites – Tutela offers a complete solution.

ward monitoring

Because of the flexibility of the Genesis 3 System, Medicinal Products stored on the ward can be monitored to the same high standards as those stored in the central pharmacy, simply by adding more hardware.

Ward data will then be integrated seamlessly into your database, and can be viewed in your web interface anywhere in the World!

stocks in transit

Medicinal Products in transit can monitored and protected using the Tutela Genesis 3 TDL transport data logger.

alarm response team

Your inventory is constantly monitored by a fully manned Alarm Call Centre, based at the Tutela UK Head Office; all day, every day of the year. When an alarm is triggered, a trained Tutela agent will phone to alert you to specific alarm details.

simple status dashboards

To make your life easier, Tutela have a simple dashboard that gives you instant, real time status of alarms affecting your whole cold chain. At a glance, you can see what action has been taken and what is outstanding.

web-based Interface

By accessing the Tutela Customer Interface, you have instant access to alarms and audit history, probe setting and isolations, graphs and tabular data, reports, records and a host of important data.

The Tutela web interface gives you everything you need all in one place.
