7TH SEPTEMBER 2020

PRODUCED BY FOREGENIX

# OVERVIEW WHO IS FOREGENIX?

We are a leading independent cybersecurity company with a focus on keeping the world's payment systems secure.

With over a decade of experience in the Payment Card Industry (PCI), we help merchants, payment processors, banks and other operators to ensure they are securing their environments effectively while complying with industry security standards.

We won the Queen's Award for Enterprise in 2019.

## WHAT DO WE DO?

**COMPLIANCE  
& RISK**

**DIGITAL FORENSICS &  
RESPONSE**

**CYBERSECURITY  
TECHNOLOGY**

# OVERVIEW WHAT IS WEBCAN?

We currently monitor over

# 300,000

Magento Merchants

# GLOBALLY

WebScan is our comprehensive non-intrusive website scanning solution. It analysis websites for specific security vulnerabilities to produce a risk score.

**The scans are passive**, meaning it looks for publicly available information (just like criminals do), and at no point does it try to exploit vulnerabilities.

WebScan looks for:

- Malware (including card skimmers)
- Platforms and patching information
- SSL issues

We like to say that WebScan is the most up-to-date website scanning solution in the market, as it is constantly updated by both our forensic team and Threat Intelligence Group.

# OVERVIEW THE RISK CATEGORIES

**CRITICAL**

Already hacked, card data actively being stolen

**HIGH**

At risk of being hacked - easily

**MEDIUM**

Some issues, unlikely to get hacked

**LOW**

Hacking unlikely

THIS IS THE PROBLEM ZONE

# OVERVIEW SUMMARY

Nearly **200,000** remain on the Magento 1 Platform

**INCREASE** of High Risk Magento 2 websites since our last report

**94%** of Magento 1 websites are High/Critical Risk

**52%** of Magento 2 websites are High/Critical Risk

## MAGENTO REMAINS THE MOST TARGETED PLATFORM BY CRIMINALS

# WEBSCAN RESULTS

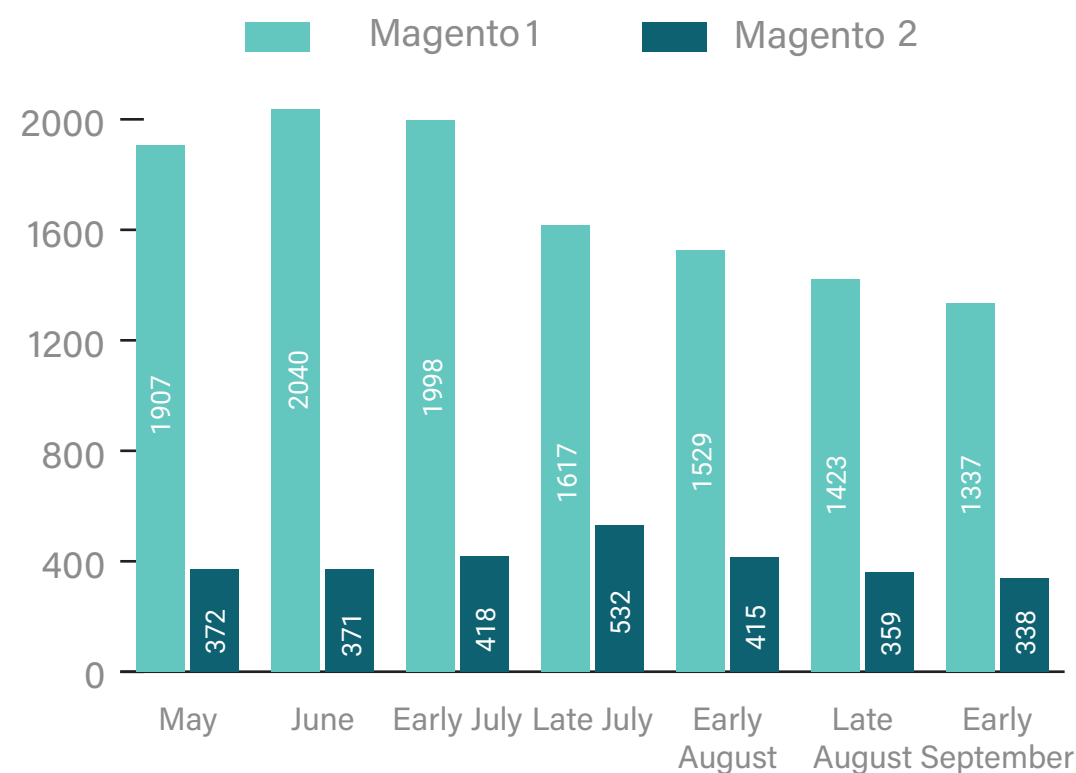

## WEBSITE NUMBERS (ALL MAGENTO)

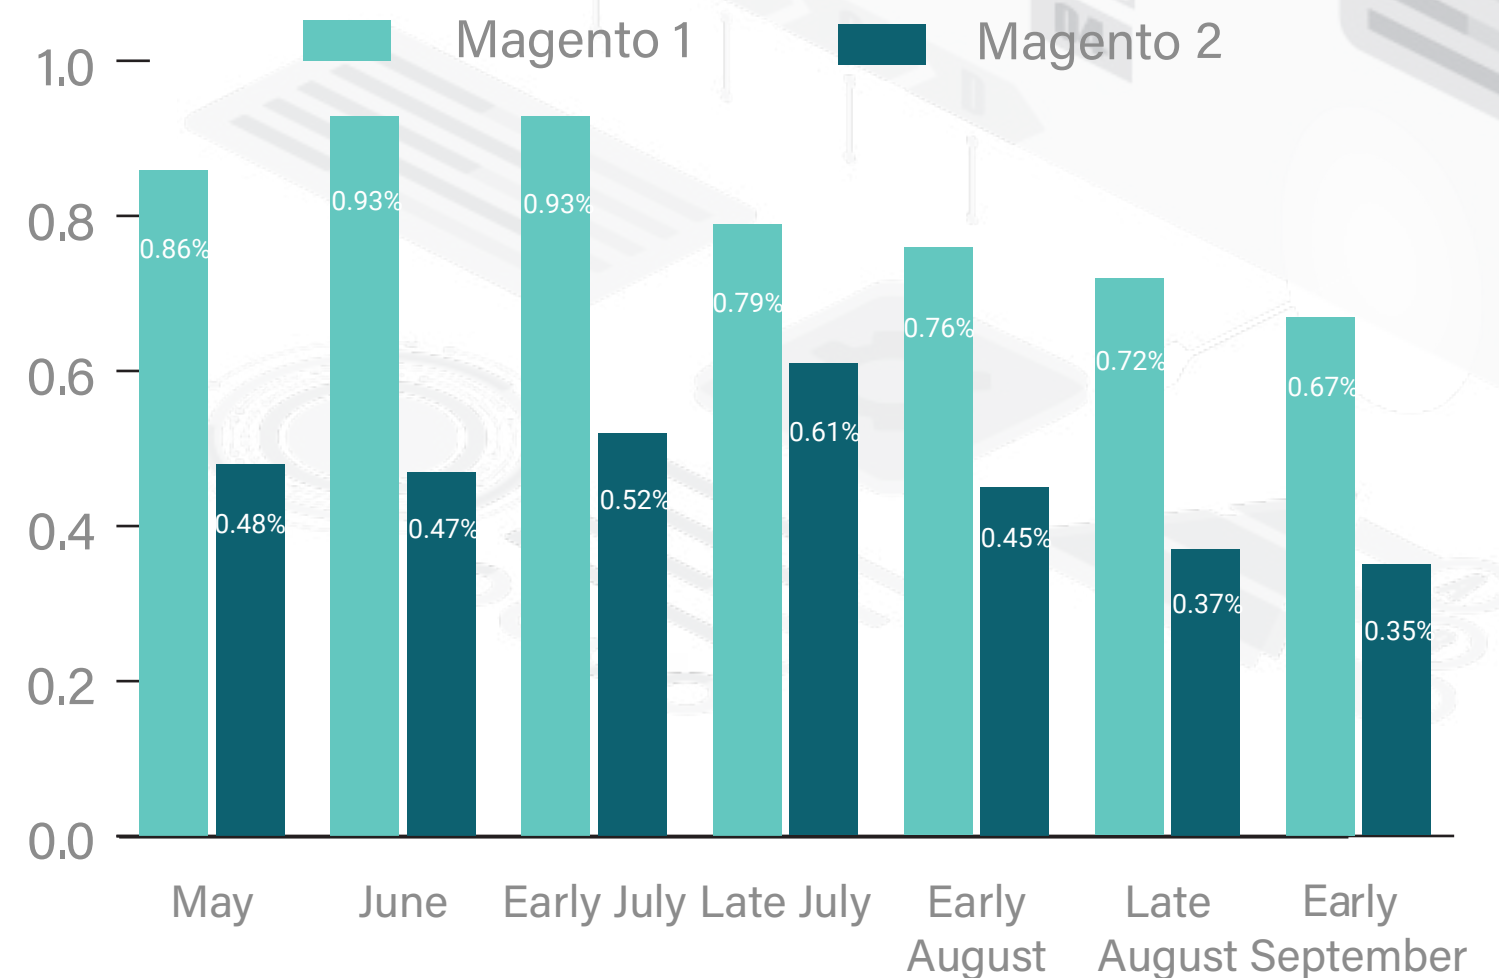

# WEBSCAN RESULTS CRITICAL RISK

Websites with Critical Risk have already been hacked (with card data being actively stolen). This month we have seen a marginal decrease in the percentage of hacked Magento 1 and 2 websites. Magento 2 decrease of Critical and High risk websites seems to be due to a patch released in late July.

## ACTUAL NUMBERS

## PERCENTAGE OF TOTAL SITES

# WEBSCAN RESULTS HIGH RISK

Websites with High Risk have significant security issues that make them very vulnerable to criminals. The sites have one or more of the following:

- Missing critical framework security patches
- Has known framework vulnerabilities
- Security issues with website setup
- Non Card Harvesting Malware

## PERCENTAGE OF TOTAL SITES

## ACTUAL NUMBERS

# WEBSCAN RESULTS

## CARD-HARVESTING MALWARE DISTRIBUTION

**MAGENTO 2**

**MAGENTO 1**

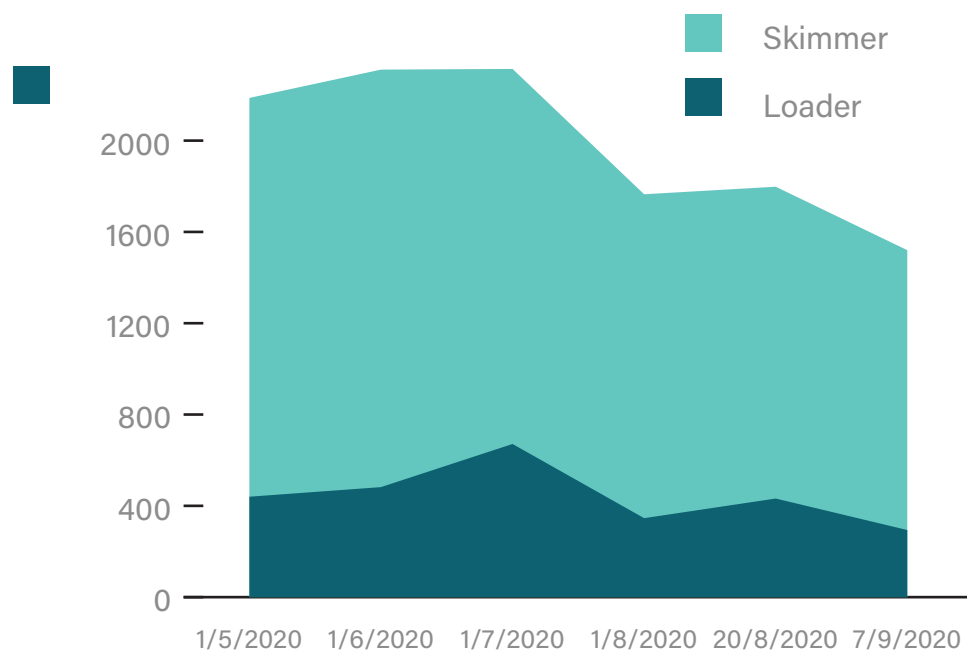

# WEBSCAN RESULTS MAGENTO 1 & 2 - LOADERS & SKIMMERS

We also track how many websites are infected with loaders and skimmers.

**Loaders** - are small pieces of code designed to load in additional malicious code onto a website.

**Skimmers** - are malicious scripts designed to scrape card data and customer information from a site's payment page before sending them off to the attacker.

The charts to the right show which regions in the world have the highest infection rate, and below shows change over time.

## MAGENTO 1

## MAGENTO 2

# WEBSCAN RESULTS MAGENTO 1 & 2 - FRAMEWORK ISSUES

Framework vulnerabilities are usually bugs in the software used to run your website.

**“Framework security patches missing”** means your website is missing security patches/updates that are already available.

Framework issues also include insecure website set up, such as leaving default settings in place (e.g. admin panel location, etc)

It's good to note that patching in Magento 2 works a bit differently than in Magento 1. With Magento 1, they released standalone security patches. This meant that websites could install these patches over older versions of Magento 1 and they would still be secure against the latest threats without having to update the entire website.

With Magento 2, they abandoned this practice and websites are expected to upgrade to the latest version of Magento should they want to stay secure.

## MAGENTO 1 PERCENTAGES

## MAGENTO 2 PERCENTAGES

# OUR INSIGHTS

Since June, the number of Magento 1 High and Critical risk websites have been decreasing. This is good news as there are still nearly 200,000 eCommerce websites on the platform.

While the number of Magento 2 hacked websites have decreased, the number of High risk websites increased. The increase can be related to insecure website set-ups. Please see our [Magento Security Insights](#) page for guidance on the simple changes that can improve your website's risk posture. This is crucial, because if an insecure set-up is not addressed, it's only a matter of time before the website is breached.
