

Speed up and improve data assessment, document search, review and redaction.

The #1 eDiscovery solution introduces the ZyLAB Insights add-on

eDiscovery AI for more insights from your data

ZyLAB Insights unlocks conceptual analysis for your eDiscovery process. Searching for concepts, like Person or Location, allows you to hone in on any category without having to create an exhaustive list of all possible keywords.

ZyLAB Insights provides rich intelligence for Early Case Assessment, reduces noise in search results, speeds up document review and redacts and protects sensitive data with a simple tick of a box.

Now you can experience the power of a wide range of different concepts (e.g. 'Person') in eDiscovery processes.

"With the data visualization you'll know quickly what is in the dataset, you'll be able to navigate the data set without 'missing' any information."

eDiscovery Consultant
on Gartner Peer Review

Use a predefined library of concepts

Including: Person, Organization, Location, SSN, Credit Card Number, Dates of birth and many more.

Create your own custom concepts

Use complex patterns from your emails and documents, such as sentiments, payment, travel patterns and more.

Create your own custom entities

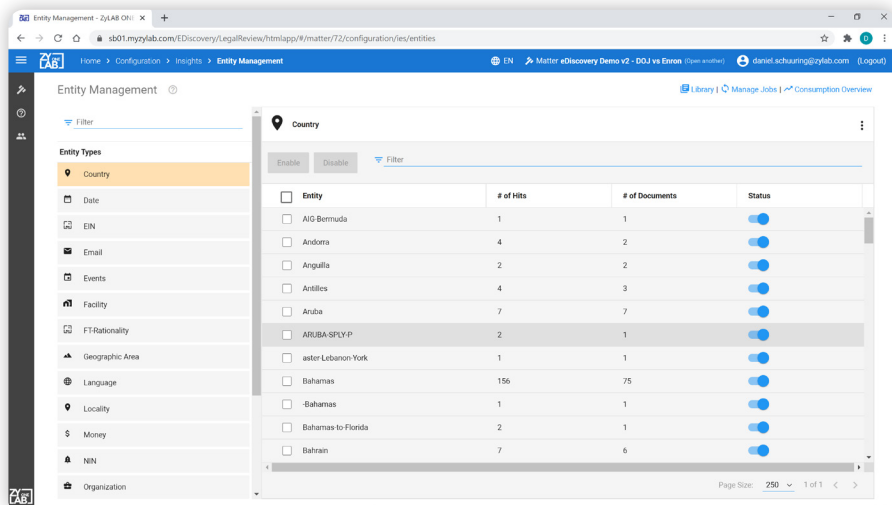

Leverage the power of regular expressions: define your own patterns to match content of your dataset.

Key benefits

Rich intelligence for Early Case Assessment

Automatic analysis of your document set provides you with an instant overview of the concepts in your dataset, so you have better intelligence to determine your case strategy.

Find different angles by zooming in on entities with a certain # of hits in your dataset or are found in a # of separate documents. Also the option to exclude concepts early on, saves you noise in search, review and redaction later.

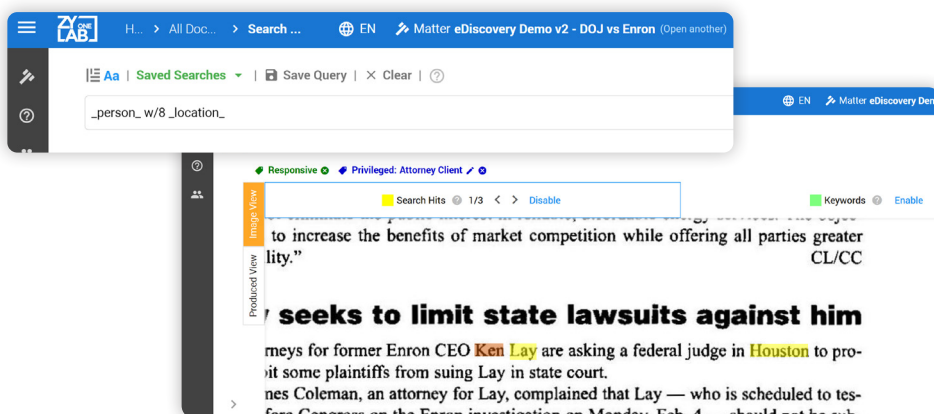

The screenshot shows the 'Entity Management' interface in ZyLAB. On the left, there's a sidebar with 'Entity Types' including Country, Date, EIN, Email, Events, Facility, FT-Rationality, Geographic Area, Language, Locality, Money, NIN, and Organization. The 'Country' type is selected. The main area displays a table of countries with columns for 'Entity', '# of Hits', '# of Documents', and 'Status'. The table lists various countries like AIG Bermuda, Andorra, Anguilla, Antilles, Aruba, ARUBA-SFLV-P, Aster Lebanon York, Bahamas, Bahamas to Florida, and Bahrain, each with corresponding hit and document counts. A 'Filter' button is visible above the table.

Entity	# of Hits	# of Documents	Status
AIG Bermuda	1	1	On
Andorra	4	2	On
Anguilla	2	2	On
Antilles	4	3	On
Aruba	7	7	On
ARUBA-SFLV-P	2	1	On
Aster Lebanon York	1	1	On
Bahamas	156	75	On
Bahamas to Florida	1	1	On
Bahamas to Florida	2	1	On
Bahrain	7	6	On

Reduce noise and speed up document search

Speed up your eDiscovery search process by reducing noise thanks to concept-based search. Concept-based search is the new way of analyzing your data and finding what really matters. ZyLAB Insights allows you to add entity types to your search queries.

For instance, when looking for mentions of people and locations in a dataset, you won't have to create an exhaustive list of all possible names and locations. Simply search for 'Person' and 'Location' and browse the results.

What you're getting

Expert help at your beck and call

Stuck? Count on ZyLAB's team of experienced support staff to help you out of a jam.

Security without compromise

ZyLAB is ISO-27001 certified and our applications are SOC-2 certified. Data is hosted in US-based Microsoft Azure Data Centers.

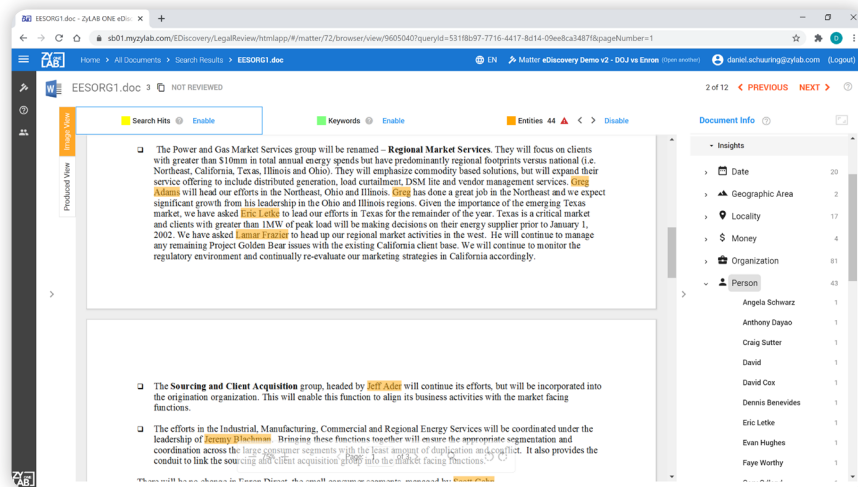

Hassle-free start

ZyLAB Insights' intuitive interface allows everyone to work with our solution easily, without the need for training.

Supercharge your eDiscovery Process

Speed up document review

Instantly navigate between concepts in document review and review only the relevant content of documents. Hone in on pre-defined concepts, such as 'Person', or create your own concepts, like 'Liability'.

"With Zylab Insights, users have a powerful add-on to significantly speed up their Early Case Assessment efforts. It allows them to quickly gain a comprehensive understanding of the contents of their dataset"

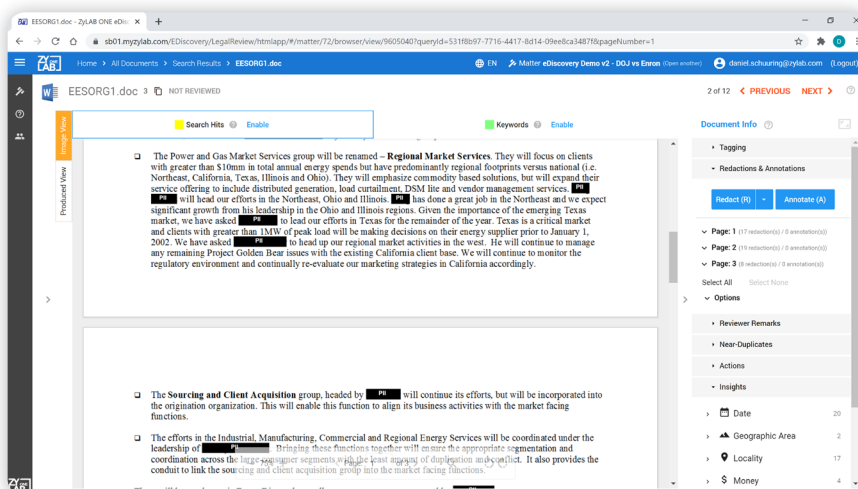

Nils Nugeren,

VP North America, Zylab

Speed up protection and redaction of sensitive data

Zylab Insights allows you to automatically redact concepts with the tick of a box. Use a library of concepts for the automatic redaction of Personal Identifiable Information or (PII) Personal Health Information (PHI) or create your own concepts or patterns. Speed up production of documents in standard eDiscovery or anonymize data for retrieval from jurisdictions with strict data privacy law in investigations and compliance.

Automatic redaction of Personal Identifiable Information or (PII) Personal Health Information (PHI) or any other concepts in your documents greatly speed up the redaction process.

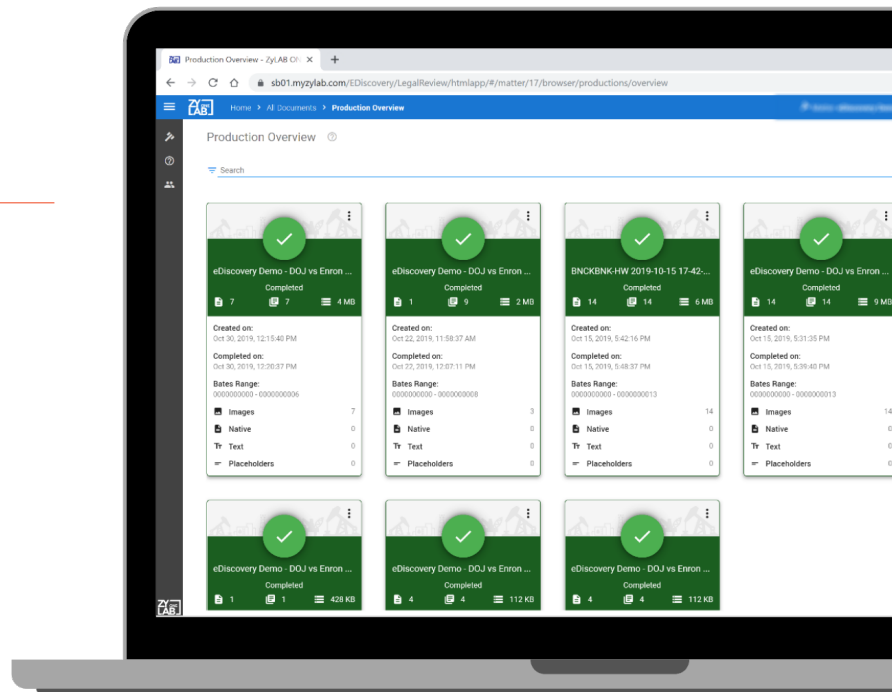

"By allowing for custom concepts, Zylab Insights can be tailored to suit the needs of every individual client, without being overwhelming."

Jeffrey Wolff, CEDS

Director eDiscovery Solutions, Zylab

Use concepts in your favourite analytics tools

Your data is yours to work with. Export the concepts in your data set to CSV or Excel and use with your favourite analytics tool.
