Semi Automated Solutions

FS380A & FS500A

Semi Automated Solutions

For work situations between semi-automatic or fully automatic working, the Automated A-models of the FS380 and FS500 series offer multiple solutions. Based on the basic models mentioned, a few Smart Solutions have been added to these A-models. This allows them to work almost independently, in a semi-automatic environment. For example, they are equipped with an automatic film installation and cutting unit as standard and can be operated remotely. For example from the fork lift truck, after placing a pallet. The film is then automatically laid, the pallet wrapped according to a pre-selected program and automatically cut at the end of the cycle and wiped against the pallet. There, the film will then stick to the pallet, due to its cling (adhesive force). If a tighter finish is required, the film welding option can be placed. This, not only creates a perfectly stable wrapped pallet, but also a very neat finish. The pallet can be safely transported without loose ends. In addition, operators and forklift drivers can work quickly and easily. All at the lowest possible Total Cost of Ownership (TCO).

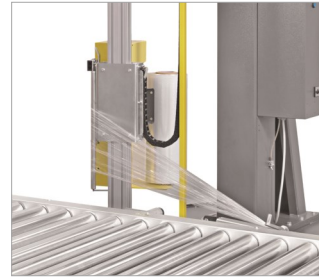

Note: In Europe these machines must be equipped with a so-called machine safety according to the applicable directive for independently operating machines.

Film attachment, clamping, cutting and swiping device

Incorporating all belonging functions of attaching, clamping, cutting and wiping the film end to the package.

This Smart Solution is integrated with the FS380A in the machine baseplate and the corresponding turntable. This unit is available with a 1.650, 1.800 or 2.200 turntable (Max. 2.000 kg) or a so called Horse-shoe turn table \varnothing 1.800mm

With the FS500A, this part is integrated in the corresponding (driven or non-driven) transport system.

Film seal unit option

The extra option, for extra security and a neat finish, the film welding unit to securely weld the film end to the package. It automatically adjusts itself to any size of pallet.

Operating Panel

The A-series wrapping machines are equipped with the EasyOP. An extensive control panel including all basic functions of the FS380 and FS500. It is installed in a separate control cabinet attached to the mast.

Multiple options

With these machines, basically all options, offered for the basic models FS380 and FS500, are available. Including but not limited to:

- CA4, CA6 & CA7 film carriages;
- Various remote controls;
- Top-pressure plates;
- Machine status indicator signals - visual/acoustic;
- Integrated scale units, with digital reading or wireless transfer to main frames, printers and other systems.

CE & Safety

When running the FS380A and FS500A in automatic mode, a machine safety installation is mandatory within the EU. This element is available as standard machine option, including metal fences and screens.
