

VACCINE FAQ'S

- + If I was diagnosed with COVID-19, should I still get the vaccine?

You can get the vaccine at least 30 days after diagnosis. You could possibly wait up to 90 days before getting the vaccine, but waiting 30 days is the minimum.

- + Can I contract COVID-19 after getting my first dose of the vaccine?

Yes, but not from the vaccine itself. You only obtain partial immune protection after the first COVID-19 vaccine and thus are still able to contract the COVID-19 illness.

- + If I contract COVID-19 after receiving my first vaccine shot should I delay getting the second shot?

If you contract COVID-19 after your first dose of the vaccine, you can receive your second dose as scheduled, or as soon as your quarantine is complete.

- + I am allergic to many medications- should I still get the vaccine?

If you have a history of anaphylaxis, it is okay to get the vaccine. You will be monitored for 30 minutes (instead of the standard 15 minute monitoring period) after receiving your COVID-19 vaccine.
