

# Device as a Service (DaaS)

## The right devices at the right time

Xenith HP (XHP) DaaS (Device as a Service) is a lifecycle management programme for end-user devices that's flexible, secure & cost-effective, with HP Proactive Management to provide insights on your existing fleet regardless of device type or OS.

Businesses can now adopt a more flexible consumption-based model for hardware provision while reducing the management overhead of the solution.

Xenith HP DaaS offers a comprehensive computing solution that includes devices and accessories that are right for the job paired with support, predictive analytics, security and partnering with us to provide proactive management services.

This solution allows an organisation to properly tailor the devices and ongoing support to their needs with a variety of plans to choose from, plus the convenience of a single price per user.

Our analytics package allows us to design the optimal solution for your company with the right mix of devices for your users.

The devices provided with DaaS are secure laptops with multi-layered, enterprise-class security are the only laptops capable of protecting against both Malware and Ransomware attacks effectively, without the need for IT intervention.

DaaS is different from your standard device leasing/financing programs because it goes beyond just the hardware.

## What do you get from XHP DaaS?

### **COST-EFFICIENTLY ALLOCATE DEVICES:**

Once installed on your existing devices, our analytics package gives us information like CPU, hard-disc and memory usage, so that we can suggest the most cost efficient devices for workers according to their usage.

### **COMPLETE PEACE OF MIND:**

XHP Service Agents provide proactive support to resolve issues before they occur, as well as technical assistance via email and are available:  
Monday – Friday  
8:00am – 6:00pm  
CET in EMEA.

### **FLEXIBLE CONTRACT:**

Our DaaS offering allows you to scale up or down in number of devices. With a number of added features and service options. It is designed to allow businesses to adopt a more flexible consumption-based model.

### **AUTOMATIC SECURITY UPDATES:**

Go well beyond standard security practices by harnessing the power of deep-learning AI to provide real-time threat detection, self-healing BIOS & hardware-enforced secure browsing that isolates web content in a virtual machine.

### **ONGOING PREDICTIVE ANALYTICS:**

Get insightful and actionable analytics to improve productivity for staff, prolong the life of your investments, take preventative action if there's a problem.

### **SUPPORTED GLOBALLY, DELIVERED LOCALLY:**

Your HP devices would be supported even if you are travelling abroad on business. This includes next business day replacement, and Accidental Damage Cover.

## HP Proactive Management

The HP Proactive Management Tool gives end-to-end visibility of your end-user's computing devices, with drill-down dashboards on over 30 metrics.

### **Other benefits include:**

- The ability to proactively mitigate issues before they affect users
- Identifying issues before they happen
- Monitor security compliance
- Help with maintaining app policies
- Troubleshoot ongoing issues

**Sign up for a 60-day free trial of HP Proactive Management on your existing fleet of computing devices**

The trial includes access to:

- HP Proactive Management Tool
- HP Sure Sense
- HP Sure Click
- A Comprehensive Device Fleet Report

## Prevent, Secure, Manage

The devices provided with DaaS are secure laptops with multi-layered, enterprise-class security providing: malware protection, real-time policy violation and firewall, and antivirus disruption alerts, plus find, lock, and erase functionality.

Here's a breakdown of the prevention, security and management features included with our DaaS solution:

HP Sure Sense uses deep learning AI to detect and prevent threats in real-time

HP Sure Click isolates key applications in their own virtual containers

HP Sure View is a built-in privacy screen that can be enabled at a touch of a button

The HP Privacy Camera built into the device includes a physical shutter to protect the user from malicious activity

HP Secure Erase uses a BIOS-level feature to permanently destroy sensitive data from HDDs and SSDs

Certified Self-Encrypting Drives employ hardware-based encryption to protect the content on the drive

HP Sure Start inspects the BIOS & automatically heals if it's been damaged.

HP Sure Run monitors all key device processes, alerting users & IT of any changes

HP Sure Recover enables end-users to restore their machines quickly and securely

HP Endpoint Security Controller is the hardware foundation for the security architecture in HP devices

HP Client Security Manager enables IT professionals to control a variety of the security features built into the devices

HP SpareKey allows you to reset passwords and restore access to locked PCs without the need of IT intervention

HP Multi-Factor Authenticate helps keep your network and VPN safe from unauthorised access

HP Image Assistant develops and maintains a robust software image and ensures that it remains up to date

HP Manageability Integration Kit is designed to integrate with Microsoft System Center Configuration Manager

Let XHP DaaS take care of day-to-day management tasks and reduce time supporting users so you can focus on projects that move your business forward.
