

STANDARDS QUARTERLY REPORT AUGUST 2021

Result of SMPTE[®] Technology Committee
Meetings
23-24 and 30-31 of August 2021

THE NEXT CENTURY

SMPTE® Standards Quarterly Report

This report comprises an Executive Summary followed by a more [detailed description](#) of this round of Technical Committee meetings:

*SMPTE Standards Committee Meetings 23-24, 30-31 August 2021
Host: Online Meeting*

Executive Summary

This Executive Summary lists the new projects this quarter and gives a high-level view of project developments. More information on the status of the active projects can be found in the [detailed account](#), after this summary.

Nine SMPTE Technology Committees (TCs) and no subgroups scheduled meetings at this round (the subgroups normally meet by telecon, so their normal cadence was able to continue through the meeting week).

79 members attended by remote access over the four days.

Documents published in the last quarter from the work of each TC are listed on [this page](#).

Proposals for new projects submitted in the last quarter			
<i>Project Name</i>	Type	SMPTE Group	Approval Period Closes
<i>ST 2021-4 BXF Schema Documentation (BXF 8.0)</i>	Revision	Media Systems	2021-07-21
<i>EG 2021-3 BXF Use Cases (BXF 8.0)</i>	Revision	Media Systems	2021-07-23
<i>ST 2067-101 OPL Image Macros</i>	Revision	Media Packaging	2021-07-21
<i>ST 2067-104 OPL Composite and Blend Macros</i>	New Doc	Media Packaging	2021-07-21
<i>ST 2067-105 OPL Output Macro</i>	New Doc	Media Packaging	2021-07-21
<i>ST 2067-106 OPL EssenceType Transform Macros</i>	New Doc	Media Packaging	2021-07-21

<i>RP 2047-5:2017 VC-2 Level 66 (roll up amendment)</i>	Revision	Essence	2021-08-05
<i>ST 2110-22:2019 Compressed Video</i>	Revision	Network	2021-08-10
<i>EG 2059-10:2016 Intro New Sync System</i>	Revision	Network	2021-08-10
<i>ST 268-2 DPX Extensions for HDR</i>	Amendment	File Systems	2021-07-13
<i>ST 2067-21 (IMF App #2E)</i>	Revision	Media Packaging	2021-09-03
<i>ST 335 Metadata Element Dictionary Structure</i>	Revision	Metadata	2021-09-13
<i>ST 2003 Types Dictionary Structure</i>	Revision	Metadata	2021-09-13
<i>ST 400 SMPTE Labels Structure</i>	Revision	Metadata	2021-09-13
<i>ST 395 Metadata Groups Register</i>	Revision	Metadata	2021-09-13
<i>ST 385 SDTI-CP in MXF</i>	Amendment	File Systems	2021-09-13
<i>32NF Document Maintenance Group</i>	Managing Reviews	Network	2021-09-14

Professional Media over IP Projects

Professional Media over Managed IP Networks

This project group developed the ST 2110 suite that standardizes an interoperable system for media IP networks to transport separate video, audio, and associated data streams. [Details](#)

Nine parts of the suite (including the essential core parts) are published.

- System Timing and Definitions *
- Uncompressed Active Video *
- Traffic Shaping and Delivery Timing for Video *
- Constant Bit Rate Compressed Video*
- Single Video Essence Transport over Multiple ST 2110-20 Streams (to support high bitrate streams)

- PCM Digital Audio
- Transparent AES 3 Data *
- ST 291 Ancillary Data *
- Timed Text streaming

* These parts are in revision from one-year review

There are also parts in development on:

- Transport of metadata that has not been derived from ST 291 packets (2 documents)
- A document tying down some additional parameters for streaming standard definition video
- Measurement considerations for 2110 streams

There is a project to create ST 2110 Protocol Implementation Conformance Statements (PICS) for documents in the SMPTE 2110 suite.

Network-Based Synchronization for the Professional Media Environment

The ST 2059 suite defines a synchronization system for media using precision time protocol (PTP) packets on an IT network. There are ongoing projects in support of the technology:

- A group has organized ST 2059 “plugfests” and is designing a testplan for a plugfest when in-person events can resume. [Details](#).
- Revisions of the two foundational standards are published and a further revision is being planned to reference the latest revision of the IEEE PTP standard. [Details](#)
- A Study Group is producing reports on Security in ST 2059 Networks [Details](#)
- A recommended practice on PTP Device Monitoring Capabilities provides interoperability in network monitoring and diagnostics. It has been posted as a Public Committee Draft and a second Public Committee Draft is expected shortly. [Details](#).
- A Drafting Group will create a report “Using ST 2059 in ST 2110 Networks with ST 2022-7 Redundancy” (not yet started).
- PTP Engineering Guidelines – one published and starting revision, another being drafted. [Details](#)

Required Application Protocol Standards for IP-Based Media Production

A study group within the Media Systems, Control and Services TC has established a Media Industry stack layering model and is researching standards requirements for interoperability of production applications. [Details](#)

Interoperable Master Format (IMF)

IMF is a file-based framework designed to support multiple high-quality content versions of a finished work destined for distribution channels worldwide. The suite currently comprises 16 published SMPTE Engineering Documents.

Some documents in the IMF suite are currently being revised. [Details](#)

IMF Plugfests are held, now conducted virtually. [Details](#)

There is work on IMF Output Profile List standards – a revision and 3 new standards. [Details](#)

SMPTE Video Compression Standards

SMPTE has standardized six video compression standards – VC-1 to VC-6.

Current work on video compression standards comprises:

- VC-6 was recently published and VC-6 mapping into MXF is underway. [Details](#)
- An eight-part suite of documents defining the VC-5 compression system (developed from GoPro's Cineform codec). Seven parts of the suite are published and work is well-advanced on the final part on Metadata and conformance additions for Metadata. [Details](#).
- Projects to revise SMPTE VC-3 documents to add Alpha channel – [Essence](#) – [MXF file](#)
- Projects on the VC-2 document suite (developed from BBC's Dirac Pro). [Details](#)

Cinema Projects

IMF, above, is also highly relevant to the Cinema community

Cinema Sound Systems

This Technology Committee (TC-25CSS) works on improving the quality of sound in cinema presentations, through the standardization of technical practices from the content creation dubbing stages to the commercial outlets.

Publication of the SMPTE 2098 suite has completed the work of the Interoperability of Immersive Sound Systems in Digital Cinema group (one part is in revision).

The TC has a working group on B-Chain Characteristics and Expectations, comprising:

- a group researching and correlating documents in the field that deal with Cinema Auditorium Characteristics and Expectations
- a listening group investigating the characteristics of sound artifacts that in any way disrupt the Artistic Intent of the program material being performed

SMPTE® Standards Quarterly Report, August 2021, Page 4

- an engineering group creating procedures to investigate and correlate the best current techniques to measure what is heard in the cinema

The WG will have a strong basis for developing documents that will give guidance that will be relevant to the entire chain of entertainment technology providers.

A revision to the Pink Noise standard is being planned.

[Details](#)

Digital Cinema (D-Cinema)

This Technology Committee (TC-21DC) has published four multi-part document suites dealing with these topics:

- D-Cinema Distribution Master
- D-Cinema Packaging
- D-Cinema Operations
- D-Cinema Quality

Current projects deal with:

- incorporating provisions for stereoscopic subtitles into existing D-Cinema documents
- projects for immersive audio in D-Cinema

[Details](#)

Reference Materials for DPX V2.0 HDR Implementations

The HDR DPX standard was published in Q1 2019 and will be amended soon to include a DPX MIME type registration. This project is working on a reference implementation and tools. [Details](#)

Material Exchange Format – MXF This widely-used file-based media format does not stand still and there continue to be projects adding features and mappings to the MXF suite of standards or creating constraints for improved interoperability in a variety of application areas. There are currently 16 MXF-related projects in process (3 about to close following publication). [Details](#) They include:

- MXF Multichannel Audio Labeling Framework (revision) and two new associated documents
- Mapping VC-3 Coding Units into the MXF Generic Container (amendment)
- Two new ARRI Registered Disclosure Documents
- Mapping Next Generation Audio (NGA) Signals into the MXF Generic Container (two documents)
- Mapping FFV1 essence into the MXF Generic Container (amendment)
- Mapping ACES Image Sequences in to the MXF Generic Container (revision)
- Mapping ST 2117-1 into the MXF Generic Container
- Dynamic Metadata for Color Volume Transform: KLV Encoding and MXF Mapping (revision)
- Mapping JPEG 2000 Codestreams into the MXF Generic Container (revision)

- SDTI-CP in the MXF Generic Container (amendment)

Media Microservices This group has two projects in the public Committee Draft stage - IMF Registration Service API and Status Reporting and logging. More projects expected shortly. [Details](#)
The group works closely with the Open Services Alliance, OSA - formed towards the end of 2019 to fast-track applications that are then submitted to SMPTE for standardization.

Extensible Time Label A project is underway to create a Standard suite for a time label that overcomes the shortcomings of SMPTE ST 12 (support for today's higher frame rates, time values greater than 24 hours) as well as supporting additional requirements of current systems and workflows such as a "Digital Birth Certificate" including a Source Ident. [Details](#)

Metadata and Registers This TC (and its predecessor) has been maintaining metadata ULs on behalf of other SMPTE TCs and industry organizations for the last 20+ years. Its systems have recently been upgraded to use xml rather than spreadsheets and an additional register has been standardized for Essence elements keys. It now has tools available to check the integrity of requests for new ULs. [Details](#)

AI and ML in Media A joint task force with the Entertainment Technology Center is studying this topic. It has sent liaisons to several industry groups known to be working in this area.

Inter-Entity Trust Boundary

Deals with the problem of securely exchanging IP flows between third party networks. A Public Committee Draft has been developed and is being reviewed. [Details](#)

SMPTE® Standards Quarterly Report:

[Detailed Account](#)

SMPTE Standards Committee Meetings 23-24, 30-31 August 2021

Host: Online Meeting

SMPTE® is a global leader in motion-imaging standards and education for the communications, media, entertainment, and technology industries – and the only organization to connect the areas of motion-imaging research, standardization, education, and business success.

We encourage interested parties to learn more about our Standards activities on [this website page](#).

This report is a snapshot in time and should not be regarded as formal minutes, a positioning statement or an analysis piece.

If you are interested in learning more about the SMPTE Standards program, or would like to submit comments, please contact the [Director of Standards Development](#)

Introduction

The quarterly SMPTE Standards meeting rounds are led by the SMPTE Standards VP, a volunteer post, and the SMPTE Director of Standards Development, a staff post. These posts are currently filled by Bruce Devlin and Thomas Bause Mason respectively.

There are three Standards Directors, currently Pierre Lemieux, Chris Lennon and Paul Treleaven.

Each round comprises meetings of Technology Committees (detail below) as well as any subgroups whose work will benefit from face-to-face meetings (current covid19 situation excepted, of course).

Subgroup work proceeds continuously between the quarterly meetings using teleconferences.

A Standards Community meeting was held to provide details of future meeting arrangements, webinars and courses.

If you need some help getting started with the SMPTE Standards process and some of the conventions / acronyms used in this report, please take a look at the [Annex](#).

Future Meetings

Quarterly Standards meeting rounds are planned for:

December 2021 Virtual

March 2022 TBA

June 2022 TBA

September 2022 TBA

This Quarterly Report provides a detailed account of the meetings of the following SMPTE Standards TCs and their sub-groups:

[Essence \(10E\)](#)

[Digital Cinema \(21 DC\)](#)

[Television and Broadband Media \(24TB\)](#)

[Cinema Sound Systems \(25CSS\)](#)

[Metadata and Registers \(30MR\)](#)

[File Formats and Systems \(31FS\)](#)

[Network and Facilities Architecture \(32NF\)](#)

[Media Systems, Control and Services \(34CS\)](#)

[Media Packaging and Interchange \(35PM\)](#)

SMPTE also has a Film Technology Committee (20F), but it does not meet during the quarterly face-to-face rounds and did not meet at this virtual round.

Links to each TC report are also provided in the footer of each page to assist with navigation.

Documents published in the last quarter from the work of each TC are listed on [this page](#).

Details from each Technology Committee (TC) meeting

[Essence Technology Committee \(TC-10E\) Chaired by John Snow and Lars Borg](#)

The application of the General Scope as it applies to electronic capture, generation, editing, mastering, archiving, and reproduction of image, audio, subtitles, captions, and any other master elements required for distribution across multiple applications

DG: Measurement Methods for Resolution Characteristics of Camera Systems

Current project:

RP xxxx - Measurement Methods for Resolution Characteristics of Camera Systems

To facilitate the maintenance and operation of studio equipment, the purpose of this project is to document measurement methods for the spatial resolution characteristics of camera systems. Specifically, to measure the Modulation Transfer Function (MTF).

Status: The document editor has submitted a draft document. It needs to be adapted to use the SMPTE template. The document will reference ISO 12233 and a copy will be obtained for committee use.

DG: SMPTE 2080 Document Suite - Reference Display and Environment for Critical Viewing of Television Pictures

This group has a suite of documents dealing with the use of fixed pixel matrix reference displays.

Published documents:

ST 2080-1: Reference White Luminance Level and Chromaticity (one-year review due)

RP 2080-2: Measurement and Calibration Procedure for HDTV Displays (deals with parameters that can be regularly adjusted)

ST 2080-3: Reference Viewing Environment Characteristics

Current projects:

RP 2080-4 - Measurement Procedures for Characterization of HDTV Displays

Defines the procedures, conditions and rules applicable for measuring the parameters of an HDTV Reference Display.

RP 2080-2: Measurement and Calibration Procedure for HDTV Displays

During development of RP 2080-4, errors in the line numbers of the test patterns in RP 2080-2 were noticed. The patterns also need to be modified to add copyright notices and define risetimes. The specified alternate white point for certain regions (9300K) should be changed to D93 and the x,y coordinates changed.

Status: The group has not made progress in the last quarter. The DG chair needs to reconstitute the DG and complete RP 2080-4 and is considering conducting another FCD ballot. It passed FCD rebalot 2019-01-11 with 73 comments to resolve, many of which are now resolved.

Business Impact: Users and industry will have common standards to assess image quality on a reference display.

DG: IPT-PQ

Prior to standardization of color representation lCtCp in ITU-R BT.2100, an alternative – IPT-PQ - was used by many major OTT distributors. It is important to these OTT distributors that these assets are labeled as utilizing the IPT-PQ color representation in two variants (scope now modified to only cover IPT-PQ-C2 and not IPT-PQ-C0), and that the characteristics are standardized.

Current project:

ST 2128 - IPT-PQ color representation.

Status: The document is at FCD ballot, closing 2021-08-25 (two days after meeting).

SMPTE Video Compression Standards

Business Impact: Interoperability between systems

The current video compression groups are:

DG: VC-6 Picture Compression

Published documents:

ST 2117-1: VC-6 Multiplanar Picture Format Part 1. Elementary Bitstream

DG: Amendment VC-3 Picture Compression and Data Stream Format

There is an [associated DG](#) to revise the ST 2019-4 MXF mapping document in the file systems TC.

Current project:

Amendment: ST 2019-1 - VC-3 Picture Compression and Data Stream Format

This project will extend the VC-3 standard to include carriage of Alpha channel.

Status: There was no report at this meeting.

DG: SMPTE 2073 Document Suite: VC-5 Video Essence

This group standardizes the CineForm / GoPro video compression system.

Published documents:

ST 2073-1 - VC-5 Elementary Bitstream

RP 2073-2 - VC-5 Conformance Specification

ST 2073-3 - VC-5 Image Formats

ST 2073-4 - VC-5 Subsampled Color Difference Components

ST 2073-5 - VC-5 Layers (this allows embedding multiple images in a single bitstream; used for stereoscopic, HDR and interlaced frames)

ST 2073-6 - VC-5 Sections

ST 2073-10 - VC-5 Mapping into the MXF Generic Container – this was work in TC-31FS

Current Projects:

ST 2073-7 – VC-5 Metadata

This will provide a basic set of metadata for input image format and facilitate round-tripping embedded metadata from other standards by use of identifiers – ACES, XMP, DPX, MXF, ALE and vendor-specific.

RP 2073-2 - VC-5 Conformance Specification

Revision to add material for Part 7 items. Software elements on GitHub are included.

Status of projects:

ST 2073-7: *had been completed but will go back to pre-DP review to incorporate changes identified while working on the reference software:*

- *Found one editorial error in a normative table*
- *Clarifications to the textual representation of metadata as XML in ST 2073-7 Annex A (Informative)*
- *Add a new data type for blocks of bytes(normative change)*
- *Need to clarify handling of duplicate metadata tuples*

RP 2073-2: *The draft of is ready for pre-FCD review and the reference software is available on GitHub for testing.*

DG: VC-2 video compression suite

VC-2 is a SMPTE mezzanine video compression standard (based on BBC's DIRAC pro).

Published documents:

ST 2042-1: VC-2 Video Compression Standard

ST 2042-2: VC-2 Level Definitions

RP 2042-3: VC-2 Conformance Specification

ST 2042-4: Mapping a VC-2 Stream into the MXF Generic Container

RP 2047-1: VC-2 Mezzanine Level Compression of 1080P High Definition Video Sources

ST 2047-2: Carriage of VC-2 Compressed Video over HD-SDI

RP 2047-3: VC-2 Level 65 Compression of High Definition Video Sources for Use with a Standard Definition Infrastructure

ST 2047-4: Carriage of Level 65 VC-2 Compressed Video over the SDTV SDI

RP 2047-5: VC-2 Level 66 Compression of UHD for use with HD Infrastructure

Current projects:

RP 2042-3 - VC-2 Conformance Specification

Revision will add specification of a reference encoder and test materials supporting the last revision of ST 2042-1.

Status: The FCD ballot passed 2021-08-12 with 10 comments to resolve.

ST 2042-1 - VC-2 Video Compression

Revision will fix errors in pseudocode and elsewhere. Incorporate clarifications. Update boilerplate text and references.

Status: Pre-FCD review has completed. There were no comments from 10E but one from a colleague of the proponent.

RP 2047-5 - VC-2 Level 66

Revision to incorporate 2018 amendment, update references and make any necessary editorial corrections.

Status: Draft posted for DG review.

Revision to SMPTE 2046 Suite

Current projects:

ST 2046-1 - Specifications for Safe Action and Safe Title Areas for Television

Add Safe areas for UHD image formats. Update normative references.

RP 2046-2 - Safe Areas for Protection of Alternate Aspect Ratios

Add Safe areas for UHD image formats. Update normative references.

Status: These projects have been dormant for a while but they are expected to restart shortly.

RDD 58 - Live Production Metadata

Create a Sony RDD document that defines the data structure of the Live Production Metadata and the packing in the vertical ancillary data packet format defined in SMPTE ST 291-1

Status: The document was published in the last quarter and the project will close.

Digital Cinema Technology Committee (21 DC) Chaired by Steve Llamb and Jack Watts

The application of the General Scope as it applies to application of mastered essence to theatrical digital distribution, including compression, encryption, wrapping, marking, packaging, media, logging, layout, projection, reproduction, and related topics.

DG: Stereoscopic Subtitling

Business Impact of Subtitles projects: Compatibility and Interoperability

Current projects:

ST 428-7 - D-Cinema Distribution Master (DCDM) – Subtitle

To revise ST 428-7 to improve rendering of Japanese timed text subtitles. The standard normatively references ISO/IEC 10646-1, which defines font files. These files provide the information to properly render horizontal and vertical text. However, current cinema subtitle rendering implementations do not use the vertical metrics and other features of the font file resulting in improper vertical and horizontal positioning of Japanese characters within a vertical string.

Status: There was no report. It was noted that participation is low and the work would benefit from the participation of a manufacturer.

RP 428-22 D-Cinema Distribution Master – Minimal Timed Text XML Requirements

A new recommended practice to create a “blank” ST 428-7 DCDM Subtitle file (Minimal Timed Text XML Requirements).

Status: RP 428-22 was posted for pre-FCD-ballot review that closed 2021-08-13.

DG: SMS-OMB Communication

Work related to communication between a Screen Management System and an Outboard Media Block.

Current projects:

ST 430-17 – SMS-OMB Communication Protocol

This project will define the protocol between a Screen Management System and an Outboard Media Block that supports the decryption and playback of an Immersive Audio Track File containing a ST 2098-2 bitstream from a compliant DCP.

Status: ST 430-17 reached pre-publication review (after ST Audit) but was returned to the TC for a second DP ballot that closed 2021-08-04. There is one late editorial comment being considered.

ST 430-14 Digital Sync Signal and Aux Data Transfer Protocol

SMPTE® Standards Quarterly Report, August 2021, Page 13

Revise ST 430-14 to:

- allow the client to indicate that it accepts both plaintext or encrypted data items
- correct selected outstanding issues identified through implementation experience, as captured at <https://github.com/SMPTE/st430-14/issues>

Status: The draft document passed FCD ballot 2020-07-07 with 18 comments. A number of comments were outside the scope of this revision and a disposition vote was held to set aside those comments; the vote passed. All comments are now resolved.

RDD 53 Hybrid Tone Mapping

Current project:

RDD 53 - Transport of digital cinema content with multiple dynamic range

This RDD is intended to support the development of applications that create, read and process Hybrid Tone Mapping content for cinema distribution.

Status: There was no report.

DG: 21DC Document Maintenance

General document maintenance, document issue tracking, 1-year & 5-year reviews of documents, project proposals for revisions/amendments as required.

ST 429-20:202X MXF Constraints

This document will allow DC documents to reference it, rather than referencing ST 377 directly.

Status: The document is available as public CD [here](#) for 6 months, started 2021-07-23.

Television and Broadband Media Committee (24TB) Chaired by Bill Miller

The application of the General Scope as it applies to mastered essence for television and broadband distribution (both separately and for hybrid television/broadband environments), including compression, encryption, wrapping, marking, packaging, media, tracking/control, presentation, reproduction, and related topics.

DG: ST 2016 Suite on Active Format Description

Published Documents:

- ST 2016-1 - Format for Active Format Description and Bar Data
- ST 2016-2 - Format for Pan-Scan Information

ST 2016-3 - Vertical Ancillary Data Mapping of Active Format Description and Bar Data
ST 2016-4 - Vertical Ancillary Data Mapping of Pan-Scan Information
ST 2016-5 - KLV Coding for Active Format Description, Bar Data and Pan-Scan Information (document withdrawn)

Current Projects:

ST 2016-1 - Format for Active Format Description and Bar Data

Add UHD formats to ST 2016-1

Status: It was agreed that the current revision draft will be used for FCD ballot. It includes the UHDTV formats, but there has been no redefinition of four reserved bits as consensus could be achieved.

Other TC-24TB business

Revision of RP 190:1996 - SMPTE Recommended Practice - Care and Preservation of Audio Magnetic Recordings (possible revision project)

The TC has consulted experts who advise that this document needs revision. It was decided that SMPTE would consult with AES over a joint effort on this subject.

Status: A liaison was sent to AES. The TC Chair will correspond directly with AES on this topic.

Note: AES has standards AES49 and older AES22 on this subject – both stabilized.

Incoming Liaison from EBU requesting a mechanism for reformatting horizontally-formatted images for vertically-oriented displays using mechanisms defined in ST 2016-2 (possible revision project)

Status: A response was sent to the EBU. A project can be started if proponents come forward.

[Cinema Sound Systems \(25CSS\) Chaired by Brian Long and C J Flynn](#)

The application of the General Scope as it applies to standards for cinema sound and cinema B-Chain systems, including performance, measurements, setup, calibration, acoustics and related topics.

The TC is maintaining a workflow chart, identifying how its projects link up and where other work is needed.

DG: ST 2098-2 Constrained Revision

Current project:

ST 2098-2 Constrained Revision

Resolve the issues and clarifications requested in the 2098-2 GitHub reporting system

Status: The DG Chair gave a status report presentation. Comments received during pre-DP-vote review have been addressed in a revised document that will now be submitted for DP vote.

WG: B-Chain Characteristics and Expectations

Create recommended practices and engineering guidelines for cinema sound systems to ensure they faithfully play back modern, digital, full dynamic-range movie soundtracks.

Status: The WG Chair gave a presentation, identifying its scope. Three work areas have been identified and three DGs were formed. The WG will resume meeting when DG work is complete. The DGs work with each other when beneficial to the work.

The Drafting Groups are:

Technical Document Research

DG is tasked with researching existing documents, standards and research papers pertaining to sound system performance and measurements – with the goal of correlating Perception and Measurement.

Status: The DG meets bi-weekly and has identified a large number of research documents and papers and has brought them to the group for analysis. It is creating a document to ease implementation of References and Footnotes and is working on its contribution for the Final RP.

Clip Analysis

Representative Clips that challenge B-chain sound systems from 14 modern movies have been identified.

Status: 2-year clip licenses have been obtained and DCPs have been made of the clips. Listening tests at multiple cinemas and reference rooms have been done and more are planned.

In-situ Analysis

Determine what system parameters need to be measured and what kind of measurements can be done in situ (emphasis on repeatability)

Status: No testing this last quarter, waiting for results from clip DG; there will be tests in the coming quarter. The group is developing a plan for cinema testing, including the potential use of M-noise, in conjunction with the AES standardization work.

Current project:

RP xxxx - B-chain characteristics and expectations required to play back modern, digital, full dynamic-range movie soundtracks

Describes a test procedure that can be used to test the interoperability of an immersive audio renderer.

Status: This project completed approval 2019-10-15. Work can start after the DGs have reported back.

Other TC-25CSS Business

A liaison relationship has been set up with CEDIA - Custom Electronics Design & Installation Association. A presentation was given to introduce CEDIA activities and to identify areas for co-operation with SMPTE TC-25CSS.

A new project proposal is being drafted for a limited-scope revision of ST 2095-1 - Calibration Reference Wideband Digital Pink Noise Signal. A presentation was given on the issues that need solving.

Metadata and Registers Committee (30MR) Chaired by Dean Bullock and Phil Warren

The application of the General Scope as it applies to the definition and implementation of the SMPTE Registration Authority, used to identify digital assets and associated metadata such as the definition of shared metadata semantics across multiple committees.

UMID Projects

The Chair of the following projects gave a status report.

SG: Application of the Unique Material Identifier (UMID)

The UMID is standardized in ST 330. RP 205 covers application of UMIDs in Production and Broadcast Environments. This SG studied ways to make the UMID more useful, resulting in a report available [here](#). The SG remains open for assistance to the other UMID project groups and to review any new work items.

Status: No new work items.

DG: UMID-related Standards

This DG is managing the following projects (a third one, UMID Resolution Protocol, is moved to TC-34CS [here](#)):

ST 330 - UMID

This project will revise ST 330 so that it additionally specifies new methods for generation of UMID Material and Instance Numbers as well as description of a camera's shooting direction in order to enhance the UMID applications. It will also consider any points needed for the 5-year review of ST 330:2011.

Status: After the DP ballot of this revision, the DG Chair proposed some improvements. A revised draft passed a second DP ballot and an ST Audit package has been submitted. The TC Chairs will initiate ST Audit.

RP 205 – UMID Applications

This project will produce an updated version of RP 205 after its 1 year review and taking account of the ongoing ST 330 update.

Status: There has been no progress in the last quarter. A draft revision with some new UMID application examples was submitted for DG review some while ago. The next step will be to finalize the draft for pre-FCD ballot review.

SG: UUID File Naming

Current project:

UUID File Naming

This project will explore ways to unify the application of UUIDs to files, primarily as file names, but respecting whatever UUIDs already have been assigned to files.

Status: The SG Chair plans to hold an inaugural meeting 2021-09-13.

RDD 18 Acquisition Metadata Revision

RDD 18:2012 does not include metadata items that have been recently introduced for acquisition by Sony cameras. In addition, some ambiguous text will be clarified.

Status: The document is in the publication queue.

WG 30MR10: Metadata Definition

This Working Group co-ordinates the process for adding or maintaining metadata items in registers. Registers are maintained and balloted in xml format. An online tool has been introduced to assist with the development of metadata entries and their validation and acceptance for batched ballots. The document is ST 2123 - SMPTE Metadata Registers. It contains a prose document and elements containing the individual registers in xml form. Requests for changes to the registers are processed and collected into batches for balloting. The current register release is available online [here](#).

Current projects:

Metadata Registers (“Sriracha” release)

This is the currently balloted version.

Status: The “Sriracha” release is being submitted for ST Audit.

Metadata Registers (“Vindaloo” release)

The next revision for ballot is codenamed “Vindaloo”

Status: A snapshot for ballot will be taken soon and is expected to contain ULs for 9 approved items.

The Metadata Registers Development Area is available here: <https://registry.smpte-ra.org/pages/>

There are projects to revise and simplify existing metadata Standards in line with administrative guideline AG18 that defines the process for adding new UL definitions to the metadata registers.

ST 335 Metadata Element Dictionary Structure

Normalize to AG18

ST 395 Metadata Groups Register Structure

Normalize to AG18

ST 400 SMPTE Labels Structure

Normalize to AG18

ST 2003 Types Dictionary Structure

Normalize to AG18

Status: Revised project proposals for the four documents have been posted for an approval period, closing 2021-09-13.

File Formats and Systems Committee (31FS) Chaired by Fred Walls and Tatsuji Yamazaki

The application of the General Scope as it applies to definition of common wrapper and file structures for storage, transmission, and use in the carriage of all forms of digital content components.

Material Exchange Format (MXF)

MXF defines a file format for Video, Audio and Data essence along with associated Metadata, for use in production systems (rather than final delivery).

There are several MXF projects under way. Some define new MXF features / applications, others revise existing documents for better interoperability.

Business Impact of all MXF-related work items: Interoperability between systems in file-based production

ST 380 - MXF Descriptive Metadata Scheme 1

Revise as part of the 5-year review in coordination with the revision of EG42. In addition, ensure that the labels in ST 380 are consistent with the new 30MR xml representations.

Status: FCD ballot comment resolution is complete. Work on this project is expected to resume 2022-01.

RP 2057 - Text-based metadata carriage in MXF

This is a constrained revision to roll-up an amendment and check Normative References.

Status: The draft revision of RP 2057 passed FCD ballot on 2018-02-09 with 5 comments to resolve. The document is also being revised in line with AG24 – MXF Style Guide. Work on this project is expected to resume 2022-01.

DG: ST 377-1 - MXF full revision

This DG published the constrained revision, ST 377-1:2019, and is now starting the full revision.

Current project:

ST 377-1 - Material Exchange Format (MXF)

This project will catalogue issues in the document and align it with the xml-based SMPTE registers.

Status: This revision will reflect how MXF is used in the field as well as adopt a consistent formatting for registers. The proponent has outlined a proposal to decompose this large document into component parts. An AHG has been formed to help with the work. Work on this project is expected to resume 2022-01.

DG: ST 2117-10 mapping ST 2117-1 into MXF

Current project:

ST2117-10- Mapping ST 2117-1 (VC-6) into the MXF Generic Container

Status: The document was being prepared for public CD release, but an issue was discovered with the UL register submission; a corrected submission will be made.

DG: Multichannel Audio Labeling

Published document:

ST 377-4 – MXF Multichannel Audio Labeling Framework

Status: All three documents (below) have been published in the last quarter and the DG and projects will be closed.

Current projects:

ST 377-4 – MXF Multichannel Audio Labeling Framework

This is a revision primarily intended to create additional MCALabelSubdescriptor properties. A controlled vocabulary was planned as part of the document but during development it was decided that the Controlled Vocabulary would be a separate document, encouraging use outside of MXF.

ST 377-41 – Multichannel Audio Controlled Vocabulary

This document was “broken out” from the revision of ST 377-4 MXF Audio Labeling Framework.

ST 377-42 – MCA Label Controlled Vocabulary

Create a controlled vocabulary Standard of MCA Label values for Channels, Soundfield Groups and Groups of Soundfield Groups based on SMPTE 377-4 that are not already specified in other documents and register them with the SMPTE metadata registry.

DG: Amendment to ST 2019-4:2016 VC-3 Mapping to MXF Generic Container

Current project:

ST 2019-4 - Mapping VC-3 Coding Units into the MXF Generic Container

This project will add support to ST 2019-4: 2016 for mapping a VC-3 bitstream carrying an Alpha channel into MXF, using the pre-defined HD raster profiles. There is a [related project](#) in the Essence TC.

Status: There was no report for the last quarter. The draft document is ready for FCD ballot but had been held awaiting completion of comment resolution on the related ST 2019-1 amendment.

RDD 54 - Mapping ARRIRAW Essence into the MXF Generic Container

Status: The draft closed RDD ballot 2020-10-05 but the proponent requested rebalot with a new half-float datatype. The revised document should be ready for ballot in the coming quarter.

RDD 55 - MXF Carriage of ARRI Camera System Metadata

Status: This document also needs revision, like RDD 54 above, for the data type. The revised document should be ready for ballot in the coming quarter.

DG: Mapping Next Generation Audio Signals into the MXF Generic Container

Current projects:

ST 2127-1 - Mapping Metadata Guided Audio (MGA) signals into the MXF Constrained Generic Container

ST 2127-1 will be agnostic of specific audio metadata formats.

ST 2127-10 - Mapping Metadata Guided Audio (MGA) signals with S-ADM Metadata into the MXF Constrained Generic Container

ST 2127-10 will be a specialization, defining specific requirements for S-ADM (Serialized Audio Definition Model) audio metadata.

Status (both): Pre-FCD-ballot review closed 2021-08-26 with no comments. FCD ballot will be started.

Amendment to RDD 48 - Mapping FFV1 Essence Stream to MXF

The project will amend tables and add an Annex K referencing the IETF work for FFV1 to accommodate community demands for using FFV1 in MXF. FFV1 is a lossless intra-frame video encoding format.

Status: This work was awaiting completion of IETF work on FFV1 (RFC 9043) – this is now published. The amendment has been updated with the RFC number and will be posted for a comment period and then balloted.

Revision to ST 2094-2 - KLV Encoding and MXF Mapping

Revise normative references to ST 377-1, ST 2094-10 and ST 2094-40 and revise the examples for ST 2094-10 and ST 2094-40

Status: The revision passed FCD ballot 2021-08-25 with 11 comments to resolve.

Revision ST 422 Mapping JPEG 2000 Codestreams into the MXF Generic Container

Revise ST 422:2019 to allow D-Cinema applications to continue using the FU frame-based wrapping but otherwise deprecate it.

Status: Comments were received on the WD. They will be addressed and FCD ballot is expected to start shortly.

Amendment to ST 385 – SDTI-CP in the MXF Generic Container

ST 385 cites *and* quotes ST 331. This revision will remove the citation, leaving just the normative reference to ST 331.

Status: The approval period for this new project closes 2021-09-13.

DG: ACES Revision Projects

Current projects:

ST 2065-4 ACES Image Container File Layout

Will address issues reported since publication and to prepare the document for ISO submission.

ST 2065-5 Mapping ACES Image Sequences into the MXF Generic Container

Will address issues reported since publication and to prepare the document for ISO submission.

Status (both): ST 2065-4 completed pre-FCD-ballot review 202-08-27 with no comments. ST 2065-5 has passed FCD ballot, now on hold until ST 2065-4 is published. Next step: FCD ballot for ST 2065-4.

WG: Archive Exchange Format (AXF)

This Working Group (31FS-30) has defined an archive format that will promote interoperability between all forms of archive media.

Published document:

ST 2034-1 - Archive eXchange Format (AXF) - Part 1: Structure & Semantics

Part 1 has been published by ISO as a Publicly Available Specification, ISO/IEC DIS 12034-1.

Business Impact: Interoperability and more cost-effective handling of technology migration issues in archives

Current projects:

ST 2034-1 - Archive eXchange Format (AXF) — Part 1: Structure & Semantics

Revise ST 2034-1 to correct syntax errors in XSD file, edit text document to support XSD changes, prepare a readme file to accompany the XSD file. It was intended to remove UML diagrams from the text document, but a means has been found to edit them.

Status: The prose update had been complete for some while, but the included xsd file needs to be updated to match the text.

ST 2034-2 - Archive eXchange Format (AXF) - Part 2: External Uses of XML Schema

Part 2 covers the use of AXF Structures in “Unwrapped” form, enabling aggregation of files into a “Bundle”. The schema can serve as a manifest and it can apply hierarchical structure to files. It is intended for use from file capture on set through to archive input. There was a strong end-user demand for this technique that gathers metadata as material passes along the workflow. Use of IMF metadata is being considered to avoid reinvention.

Status: This Part has been the group’s focus this quarter. The structure relationships (elements and attributes) have been established and the semantics work is started. The xsd for Part 2 will then be created.

DG: Constrained DPX for HDR

Published document:

ST 268-2 - Constrained Application of Digital Moving-Picture Exchange (DPX) Format for High Dynamic Range.

Current projects:

RP 268-3 - Reference Materials for DPX V2.0 HDR Implementations

Project scope: Generate a reference model and test materials that implement the essential features of HDR DPX workflows.

Status: The group holds monthly meetings. C++ model is available for review. The draft RP text should be ready for pre-FCD-ballot review after 1-2 more meetings. Test images and references are on Git LFS.

Amendment ST 268-2 - Constrained Application of Digital Moving-Picture Exchange (DPX) Format for High Dynamic Range

Project scope: The amendment will include the registration template information required by RFC 6838.

Status: Project approval completed 2021-07-13. The amendment will add a DPX IANA MIME type registration. The draft has passed pre-FCD review and will go to FCD Ballot once feedback from IANA has been incorporated.

Network and Facilities Architecture Committee (32NF) Chaired by Leigh Whitcomb and Thomas Kernen

The application of the General Scope as it applies to definition and control of elements supporting the infrastructures of content production and distribution facilities, including file management, transfer protocols, time labelling of essence, synchronization of systems, switching mechanisms, and physical networks that are both internal and external to the facility excluding unique final distribution methods.

WG: SDI Interfaces

The Working Group (32NF40) scope is:

Manage Engineering Documents dealing with electrical and optical SDI interfaces with nominal link rates up to 3Gb/s as well as a 10Gb/s optical interface including the mapping of essence, data, and metadata and the details of the physical interfaces.

NOTE: It has been agreed that the work of WG-32NF70 on UHD SDI interfaces will be merged into this group; the scopewill then not be limited to 3Gb/s.

Business Impact of all WG 32NF40 work items concerns interoperability between systems.

Status: All 32NF40 DG projects are complete. When 32NF70 merging is complete, the projects below will be in 32NF40.

WG: Ultra HD SDI Interfaces

This Working Group (32NF70) was established to create a hierarchy of single-link, dual-link and quad-link electrical and optical SDI interfaces with nominal link rates of 6Gb/s (ST 2081 suite), 12Gb/s (ST 2082 suite) and 24Gb/s (ST 2083 suite, never started). See below for the individual documents in each suite.

The optical interface parameters supporting these standards have been added to ST 297-1: Serial Digital Fiber Transmission Systems.

WG Status: Draft revisions for ST 2081-1 and ST 2082-1 from 5-year review passed FCD ballot 2021-04-15. There was no report on progress of these documents.

DG: ST 2081 Suite - 6Gb/s Signal/Data Serial Interfaces

Published documents:

ST 2081-1: 6Gb/s Signal/Data Serial Interface – Electrical

ST 2081-10: 2160-line and 1080-line Source Image and Ancillary Data Mapping for Single-link 6G-SDI

ST 2081-11: 2160-line and 1080-line Source Image and Ancillary Data Mapping for Dual-link 6G-SDI

ST 2081-12: 4320-line and 2160-line Source Image and Ancillary Data Mapping for Quad-link 6G-SDI

ST 2081-30: Transport of Multiple 3Gb/s or 1.5Gb/s signals on a 6G-SDI link

DG: ST 2082 Suite - 12Gb/s Signal/Data Serial Interfaces

Published documents:

ST 2082-1: 12Gb/s Signal/Data Serial Interface – Electrical

ST 2082-10: 2160-line and 1080-line Source Image and Ancillary Data Mapping for Single-link 12G-SDI

ST 2082-11: 2160-line and 1080-line Source Image and Ancillary Data Mapping for Dual-link 12G-SDI

ST 2082-12: 4320-line and 2160-line Source Image and Ancillary Data Mapping for Quad-link 12G-SDI

ST 2082-30: Transport of Multiple 6Gb/s, 3Gb/s or 1.5Gb/s signals on a 12G-SDI link (published)

WG: Video Over IP

This Working Group (32NF60) handles projects related to IP transport of media.

Business Impact of all WG 32NF60 work items concerns interoperability between IP - based media systems.

DG: SMPTE 2110 suite - Professional Media over Managed IP Networks

This group is responsible for a suite of standards specifying the carriage, synchronization and description of separate elementary essence streams over IP for the purpose of live production and facility interconnects.

Published documents:

ST 2110-10 - System Timing and Definitions

ST 2110-20 - Uncompressed Active Video

ST 2110-21 - Traffic Shaping and Delivery Timing for Video

ST 2110-22 - Constant Bit Rate Compressed Video

SMPTE® Standards Quarterly Report, August 2021, Page 25

RP 2110-23 - Single Video Essence Transport over Multiple ST 2110-20 Streams

ST 2110-30 - PCM Digital Audio

ST 2110-31 - AES3 Transparent Transport

ST 2110-40 - SMPTE ST 291-1 Ancillary Data

Current projects:

Status: It is possible that resolution of small issues picked up by the ST 2110 [PICS group](#) will be incorporated in documents that are currently in revision (as late comments).

ST2110-22 One-Year-Review- project proposal posted for minor tweak to allow explicit signaling of gapped TX method.

ST2110-11 EG – project proposal being drafted for EG: Regarding RTP Timestamping

ST 2110-10 - System Timing and Definitions

Revision following one-year review

Status: The draft revision passed FCD ballot 2020-03-26 with 59 comments. All comments are resolved and accepted except one. The path to resolution for the last comment has been agreed.

ST 2110-20 - Uncompressed Active Video

Revision following one-year review

Status: The draft revision passed FCD ballot 2020-04-27 with 19 comments to resolve. Comment resolution is complete. It is planned for the one-year-review revisions of the core 2110 Parts to proceed to publication together.

ST 2110-21 - Traffic Shaping and Delivery Timing for Video

Revision following one-year review

Status: All comments are resolved and accepted except one. The path to resolution for the last comment has been agreed.

RP 2110-24 – Standard Definition Video in ST 2110

Recommended Practice for transporting the standard-definition television signals described in SMPTE ST 125 within the SMPTE ST 2110-20 payloads; provides further definition of Pixel Aspect Ratio, Height, Alignment with SDI raster.

Status: The draft RP passed FCD ballot 2020-10-21 with 23 comments to resolve. All comments are resolved and accepted. Next step is Pre-DP vote review (has dependencies on 2110-20:2021).

RP 2110-25 – Measurement Considerations for 2110-20 streams

This work arose out of the one-year review discussions of ST 2110-21. Rather than add this information to ST 2110-21, the DG decided that this topic should be separated into its own document. Scope: Recommend key measurements for video, audio and ancillary data along with nomenclature

and formulas. Recommend ways to implement measurements and report the results. Clarify measurement meanings.

Status: A sub-group has been developing the draft RP. In recent weeks the draft was reviewed by the DG and a draft for pre-FCD-ballot review in the TC is expected very soon.

ST 2110-31 - AES3 Transparent Transport

This revision adds clarifications and notes, but no substantive changes.

Status: The revision passed FCD ballot 2020-12-06 with 22 comments to resolve. All comments are resolved and accepted except one. The path to resolution for the last comment has been agreed.

ST 2110-40 - SMPTE ST 291-1 Ancillary Data

Revision following one-year review

Status: The revision passed FCD ballot 2020-12-06 with 11 comments to resolve. All comments are resolved and accepted.

ST 2110-41 – Fast Metadata eXpress (FMX)

An RTP Payload Format for general metadata objects. Intended for transporting any metadata that did not originate as ST 291 ancillary data. Each type of metadata needs a defining document.

Supports “tightly-bound” metadata (associated to an essence stream)

Status: Draft document is nearly at WD status and has been shared with AES for comment (AES has a project that will reference ST 2110-41). Each type of metadata needs a defining document.

ST 2110-42 – FMX Payload for ST 2110 Technical Metadata

An Object Format for Technical Metadata associated with 2110. Example usage:

-20: Carries the values of the FMTP parameters for the stream

-30/31: Carries the ptime and number of channels

-40: Carries the video format tag (VPID byte)

All: Can carry the AMWA Sender ID and/or Flow ID

Status: Document is in development, draft exists. It will use the metadata packaging being defined in Part 41.

ST 2110-43 – Timed Text Markup Language for Captions and Subtitles

An RTP payload format has been defined in IETF RFC 8759. This Standard provides additional specifications to ensure interoperability when used for captions and subtitles in the SMPTE 2110 environment.

Status: ST 2110-43 is now published.

DG: ST 2110 Protocol Implementation Conformance Statement (PICS)

SMPTE® Standards Quarterly Report, August 2021, Page 27

This functions like a conformance checklist

Status: PICS drafts for 2110-10, -20, -21, -30, -31, -40 have been contributed. The group meets weekly and has completed work on -10, WIP on -20, -30, -31, -40. The group has provided feedback to the 2110 DG which has been processed as late comments in the one-year-review versions of these documents.

WG: Time Labeling and Synchronization

This Working Group (32NF80) was established to handle projects for next-generation synchronization of systems using packetized networks and time labeling of essence.

Business impact of WG 32NF80 work items: Network-based facility synchronization and new functionalities for time labeling.

Published documents:

ST 2059-1 - Generation and Alignment of Interface Signals to the SMPTE Epoch

ST 2059-2 - SMPTE Profile for Use of IEEE-1588 Precision Time Protocol in Professional Broadcast Applications

EG 2059-10 - Introduction to the New Synchronization System

Current DGs and projects:

DG: One-year reviews of ST 2059-1, ST 2059-2, EG 2059-10

Revision in the light of interop testing and other scrutiny since the original publication.

DG Status:

ST 2059-1 - Generation and Alignment of Interface Signals to the SMPTE Epoch and ST 2059-2 - SMPTE Profile for Use of IEEE-1588 Precision Time Protocol in Professional Broadcast Applications have just been published. Further revisions are being considered to these documents to reference the 2019 revision of IEEE 1588 (they currently reference the 2008 revision). The DG will consider whether to create a new profile for the 2019 revision or revise ST 2059-2.

EG 2059-10 - Introduction to the New Synchronization System

The EG requires update for normative references and to use new terms “leader”, “follower”. The 2019 version of IEEE-1588 will be referenced.

Status: Revision work has started.

DG: ST 2059 Interoperability Testing

The purpose is to confirm that the provisions of the standards are unambiguous and that the technology yields the intended results. The Interop DG itself is open to all SMPTE Standards Community members,

but its Testing AHG and attendance at the interop meetings is subject to signing a non-disclosure agreement and memorandum of understanding.

There have been five rounds of testing, all hosted by FOX NE&O in Houston, TX, USA:

2015-11, 2016-06, 2017-03, 2018-02, 2019-02.

Reports (where available) are on this SMPTE [website page](#).

Status: A list of items to test is being compiled for future interops, especially selecting network topologies of greatest interest. The group is looking at potential dates and locations for an in-person event in Q1 2022. The DG is developing test plans. Testing extension of PTP over WAN and Time as a Service are being considered.

DG: RP 2059-15 - ST 2059-2 PTP Device Monitoring Capabilities

Current project:

RP 2059-15 - ST 2059-2 PTP Device Monitoring Capabilities

The project creates a reference model containing a set of parameters to query the status of ST 2059-2 PTP devices. The Data Model is built on IETF RFC 8575 “YANG Data Model for the Precision Time Protocol (PTP)” with additional parameters:

- GNSS and Grand Master specific parameters
- SMPTE ST 2059-2 specific parameters
- RFC 8173 PTP MIB specific parameters

Status: The draft document is [available on GitHub](#) for a public CD period. It includes a .yang file as an element of the standard. There is also a companion survey for potential implementors. The group has also contacted SDOs and industry to encourage interest and feedback on this document. The group continues to meet bi-weekly to actively work on closing comments received to prepare PCDv2.

DG: ST 2120: Extensible Time Label (TLX)

Create a basic Time Label with a defined mechanism for registration of additional fields

Three documents are currently in development:

ST 2120-1 – Extensible Time Label – TLX Structure

ST 2120-2 – Extensible Time Label – TLX Items (includes a JSON schema element ST 2120-2a)

ST 2120-3 – Extensible Time Label – TLX Profiles (includes a JSON schema element ST 2120-3a)

Status: The DG has held 11 meetings in the last quarter. The work during this period has focused on defining a “Minimum Viable Product”, MVP, that is attractive to implementors. The MVP will define the following items whose presence and configuration would be defined by the profiles document:

- *TLXuniqueSourceID: a UUID as defined in RFC 4122*
- *TLXptpTimestamp: a SMPTE Epoch PTP time*
- *TLXmediaCount: an integer count of media units.*
- *TLXmediaUnitInterval: number of seconds to next media unit*
- *TLXst12: representation of an ST 12 time and control code payload*
- *TLXsourceName: a user-selected string suitable for informal, local references*

The DG will release its documents as public CD to expose the designs to potential implementers for comment. The DG has developed code to test the models. It estimates readiness for pre-FCD review to need 2 or 3 additional DG meetings.

SG: Using ST 2059 in ST 2110 Networks with ST 2022-7 Redundancy

The current ST 2059 documents and their underlying references (IEEE-1588:2008) do not provide sufficient clarity regarding the behaviors of Grandmaster Candidates or Slave-only devices when operating on networks with redundant parallel infrastructures.

Current project:

ER xxxx - Using ST 2059 in ST 2110 Networks with ST 2022-7 Redundancy

Status: No progress this quarter

DG: PTP synchronization Engineering Guidelines

Published document:

EG 2059-10 - Introduction to the New Synchronization System (being revised in [this group](#))

EG 2059-14 - Best Practices for Large Scale SMPTE ST 2059-2 PTP deployments

Status: A new draft was posted during the 2019-03 meeting week. No progress since, though the draft has a substantial amount of useful information.

WG: Data over AES3

This Working Group (32NF90) was established to handle projects that standardize AES3 carriage of data streams. These streams may be compressed audio, metadata – anything other than AES3 audio itself!

DG: ST 337 family of documents

This group manages documents that define carriage of data formats using the ST 337 method.

Current projects:

ST 2041-4 - Carriage of MPEG-H 3D Audio Streams (MHAS) in AES3 Transport

MPEG-H provides for carriage of immersive and interactive audio in the form of channels and objects and also in the form of Higher Order Ambisonics (HOA). The project will develop a standard to specify

the format for carriage of MPEG-H data for professional applications as Non-PCM audio using the AES3 serial digital audio interface defined by ST 337.

Status: There has been no progress on the WD document for several quarters; it is still intended to complete the work.

SG: Security in SMPTE ST 2059

This Study Group investigates vulnerabilities in ST 2059 systems, both malicious and accidental. The group has decided to issue limited-scope incremental reports, whilst collecting topics (in a “backlog”) for future reports.

Status: Version 1 of the report is published, [ER 1005](#). It focused on the Threat Landscape. The SG is finalizing contents for Version 2 that focuses on threat detection and mitigation strategies. There may be a 3rd report (dependent on a new Chair coming forward) on new IEEE 1588 V2.1 security changes.

DG: 32NF Inter Entity Trust Boundary

Current Project:

RP 2129: Inter Entity Trust Boundary

The document introduces the concept of a Trust Boundary, which is a security function at the edge of an Entity’s network, and explains how most of the security, address space and firewalling challenges can be overcome to securely exchange IP flows between third party networks in a pre-defined architecture using existing protocols.

Status: The DG has reached consensus on the WD and will ask the TC Chairs for pre-FCD review in the coming week.

Other TC-32NF Business

A new project proposal has been issued for a DG to handle all 32NF one-and-five-year reviews.

Media Systems, Control and Services Committee (34CS) Chaired by John Footen and Paul Gardiner

The application of the General Scope as it applies to the implementation of media services, methods of managing and controlling hardware devices and software systems, and the management of media workflow processes, including associated signalling and control mechanisms.

UMID Resolution Protocol

This project will draft a new SMPTE standard that specifies an industry-standard method for a given UMID to be converted into the corresponding URL of its audiovisual (AV) material.

Status: The project Chair posted a status report presentation. A TC-34CS Drafting Group has been set up. It is expected that work will get under way after the associated TC-30MR UMID work is closer to completion.

BXF Suite of Documents

Published documents:

- RP 2021-1: General Information and Informative Notes
- ST 2021-2: Protocol
- EG 2021-3: Use Cases
- ST 2021-4: Schema Documentation
- RP 2021-5: Ad-ID / EIDR in BXF
- RP 2021-6: BXF SDK Documentation
- RP 2021-9: Implementing BXF

BXF is an XML-based system that standardizes exchange of Schedule, As-run, Content Transfer instructions, Content-related metadata, and Agency instructions.

BXF incremental development - New features are added to the suite at regular intervals and these are batched into versions using a numeric version number – current published version is BXF 7.0.

Status:

Revisions to add BXF 8.0 items in EG 2021-3 (Use Cases) and ST 2021-4 (Schema Documentation) began pre-FCD review 2021-08-18. Review open until end of day 2021-09-01. BXF 8.0 FCD ballot anticipated in January 2022. Some items already being considered for BXF 9.0.

SG: Required Application Protocol Standards for IP-Based Media Production

This group was formed as a result of an AHG recommendation. It will explore prospective Media Industry layering models and standards requirements for interoperability of production applications running on IP-based media networks.

Status: The SG has held several meetings and developed a Media Production Network Stack. It has identified that its focus is the Workflow Layer, “PN-3”. Planned phases of work are:

- 1. (Completed) Identify existing standards and specifications (from SMPTE and others)*
- 2. (Underway) Identify draft PN-3 interoperability requirements, attributes, features, etc.*
- 3. Perform a gap analysis to assess the need for further work and analysis*

DG: Media Microservices

This group is managing Microservices projects submitted to SMPTE from the Open Services Alliance, OSA.

Status: There is work in the OSA that is expected to be contributed later to the DG:

- *Vocabulary (expected in DG soon)*
- *Jobs and Services (expected in DG Q4 2021)*
- *Privacy and Security*

Projects currently underway:

ST 2125 – IMF Registration Service API

This project facilitates the use of IMF packages.

Status: Issued as public CD document [on this page](#). Anticipating continuing standardization process in early 2022.

ST 2126 – Microservices Status Reporting and logging

This project creates a standardized approach to implement status reporting to overcome the problem of multiple proprietary and non-interoperable ways.

Status: Issued as public CD document [on this page](#). Anticipating continuing standardization process in early 2022.

Media Packaging and Interchange Committee (35PM) Chaired by Florian Schleich and Mitch Jacobs

The application of the General Scope as it applies to the packaging of media elements, to facilitate interchange and interoperability of formats within specific integrated application ecosystems in the professional fields of media creation, production, postproduction archiving and related topics.

Interoperable Mastering Format (IMF)

IMF is a file-based framework designed to support multiple high-quality content versions of a finished work destined for distribution channels worldwide. It facilitates management and processing of these content versions, including playback, validation and transformation to the various master formats used by each distribution channel. IMF is intended for international use in professional applications.

Business Impact: Interchange of file-based masters for current and next generation audiovisual content, including wide-color gamut (WCG), high-dynamic range (HDR) imaging and immersive audio.

DG (35PM-50): IMF Document Maintenance

Issues are continuously collected and discussed in SMPTE 35PM GitHub repository - <https://github.com/SMPTE?q=2067> - and members contribute to revision work, for both bugs and improvement requests.

Published documents:

- ST 2067-2 - Interoperable Master Format — Core Constraints
- ST 2067-3 - Interoperable Master Format - Composition Playlist
- ST 2067-5 - Interoperable Master Format - Essence Component
- ST 2067-8 - Interoperable Master Format - Common Audio Labels
- ST 2067-9 - Interoperable Master Format - Sidecar Composition Map
- ST 2067-20 - Interoperable Master Format - Application #2
- ST 2067-21 - Interoperable Master Format - Application #2E
- ST 2067-30 - Interoperable Master Format - Application #3
- ST 2067-40 - Interoperable Master Format - Application #4 Cinema Mezzanine
- ST 2067-50 - Interoperable Master Format - Application #5 ACES
- RDD 45 - Interoperable Master Format - Application ProRes
- ST 2067-100 - IMF - Output Profile List
- ST 2067-101 - IMF - Output Profile List - Common Image Definitions and Macros
- ST 2067-102 - IMF - Output Profile List - Common Image Pixel Color Schemes
- ST 2067-103 - IMF - Output Profile List - Common Audio Definition and Macros
- ST 2067-200 - IMF - Dynamic Metadata for Color Volume Transform (DMCVT) Plug-in
- ST 2067-201 - IMF - Immersive Audio Bitstream Level 0 Plug-in

Current Projects:

ST 2067-40: Interoperable Master Format – Application #4 Cinema Mezzanine

Adds support for the preservation and interchange of SDR DCDM essence and timeline. Incorporate Amendment 1:2017, update normative references.

Status: The document is in the publication queue and the project is closed.

ST 2067-102: IMF OPL Common Image Pixel Color Schemes

Updates related to Revision of 2067-21, support added #2E color schemes, support for out-of-range YCbCr code values, normative reference updates.

Status: The document is in the publication queue and the project is closed.

DG: IMF Plugfests

The Plugfest DG has held several plugfests, the most recent was at Disney/ABC - Burbank, CA, US 2020-02-12 and 13.

Current projects:

IMF Plugfests

Maintains a forum for the interchange of sample IMF material for interoperability testing.

Status: The DG Co-Chair reported that the group will work on HTJ2K revision interop project (once project approved).

DG: IMF Output Profile List

This group created parts 100, 101, 102, 103 of the IMF suite.

Current projects:

ST 2067-101-OPL-Image Macros

Revision to clarify the handling of images that are: i) chroma-subsampled; ii) Interlaced; and iii) stereoscopic.

This project also adds new common image processing macros to ST 2067 -101:2018 including 3x3 matrix, 1D LUT (Look Up Table), named transfer function decode/encode and named color space conversion.

Status: The document is being developed in markdown format.

ST 2067-104 – OPL Composite and Blend Macros

This new document develops the processing macros for image composite and blending between a foreground and a background plate with an alpha (channel) image to control the operation. The macros are part of the IMF OPL framework defined by ST 2067-100.

Status: Being developed in GitHub repository using markdown referencing XML schemas and examples.

ST 2067-105 – OPL Output Macros

This new document develops the image and audio output macros for the IMF OPL framework defined by ST 2067-100. This project will add a set of output macros based on the AMWA AS-11 in OPL report (SMPTE ER 1006) and IAB in OPL report (SMPTE ER 1005) including the generation of ISO BMFF (QuickTime), TTML, AMWA AS-11, PCM essence in ISO BMFF (QuickTime) and immersive audio in BWF+ADM files.

Status: Being developed in GitHub repository using markdown referencing XML schemas and examples.

ST 2067-106 – OPL EssenceType Transform Macros

This new document develops the essence type transform macros for timed-text rasterization and immersive audio bitstream (IAB) conversion. The macros are part of the IMF OPL framework defined by ST 2067-100.

Status: Being developed in GitHub repository using markdown referencing XML schemas and examples.

SG - ER: AMWA AS-11 OPL

To examine the technical requirements of transforming IMF Application DPP Compositions to flat AMWA AS-11 MXF files.

Status: The report has been published as ER 1006 [here](#); close project.

SG - ER: Immersive Audio Bitstream in OPL

Examine use cases and technical requirements of generating deliverables from Immersive Audio Bitstream (IAB) track files.

Status: The report has been published as ER 1005 [here](#); close project.

WG: IMF Application DPP

DPP is the Digital Production Partnership in the UK. This WG (35PM-60) coordinated projects concerned with the creation of two SMPTE Technical Specifications (TSP) that are now being converted to RDDs:

RDD 59-1 IMF Application Constraint DPP (ProRes)

Convert TSP 2121-1 to RDD 59-1

RDD 59-2 IMF Application Constraint DPP (J2K)

Convert TSP 2121-4 to RDD 59-2

Status (both): The documents are available as public CDs and awaiting feedback, [here](#).

DG: IMF Application VC-3

Current project:

ST 2067-70 - IMF Application of ST 2019-1 (VC-3)

To define a mastering workflow using VC-3 family of codecs in IMF, focused on broadcast post-production. A public CD release is intended.

Status: There was no report. The pre-FCR review ended 2020-11-20 and the editor had incorporated resolution to the comments received.

DG: IMF Application UHDTV Program Workflow (AVC)

Current project:

ST 2067-60 IMF Application 6 UHDTV program workflow (AVC)

IMF Application to improve the efficiency of UHD TV program workflows in broadcasting stations mainly in terms of processing time and storage capacity.

Status: The document has been at public CD release on [GitHub](#) since 2021-03-01 and comments were received. An updated working draft is posted for a second pre-FCD ballot review, closing 2021-08-23 and a second Public CD phase is planned to follow.

RDD 56 Track File for JPEG 2000 Codestreams with Time-Synchronous Metadata

Specification of an existing method (asdcplib) for frame wrapping JPEG 2000 codestream paired with time-synchronous metadata.

Status: The document is in the publication queue (now published).

SMPTE Standards Publications in the Last Quarter

Notes on this Report and the SMPTE Standards Process

All trademarks appearing herein are the property of their respective owners.

SMPTE Technology Committees (TCs) are tasked with the development and ongoing maintenance of engineering documents concerning Television, Broadband, Film and Digital Cinema. TCs are set up by the Standards Vice President (SVP) and are overseen by the Standards Committee (ST).

The standards process operates under the [SMPTE Standards Operations Manual](#) (OM) All participants must abide by these provisions.

Within Technology Committees, there may also be Working Groups (WGs), Study Groups (SGs) Drafting Groups (DGs) and Ad-Hoc Groups (AHGs).

The 'Standards Community' (SC) is a "parent group" that provides access to all Technology Committees. An SC meeting is held during each meeting round to convey information that is relevant to all TC's, such as meeting logistics and registration information.

SMPTE Document Development Process

The document stages are:

WD = Working Draft **CD** = Committee Draft inc. **pCD** option for early public exposure

FCD = Final Committee Draft

DP = Draft Publication, which initiates..... **ST Audit** - a due-process check by the Standards Committee

SMPTE Document-Type Abbreviations

ST = Standard

RP = Recommended Practice

EG = Engineering Guideline

RDD = Registered Disclosure Document **ER** = Engineering Report (from Study Group or Task Force)

OV = Overview, usually used with multipart document suites to explain the structure

SMPTE Document Review

The SMPTE Operations Manual calls for review of published documents:

- One Year after original publication - to check whether comments have been received during initial implementations and to revise if required

- At Five Year intervals after original publication - to check whether the provisions need to be revised

Options are: Revise; Reaffirm; Stabilize; Withdraw.

Other Notes

*This report describes each active **Project** in each TC. Occasionally, there is more than one project group working on a technology topic. In this case, those projects are grouped under a **Topic** headline.*
