The Guide to Planning and Hosting Virtual Events
The Future of Events is Virtual

This year, we are learning that graduations can be just as special when live streamed, learning can happen from the living room floor with a laptop and some instruments, and events that were supposed to include live networking, keynote speakers, and breakout sessions are pivoting to incredible online events.

This guide will review the different types of virtual events, how to be the virtual host with the most, audio visual requirements and gear, budget, and promoting your virtual event. We also put together a checklist so you can make sure your online event is a success.
Types of Virtual Events

“Virtual events” is an umbrella category that spans events like virtual conferences, live streamed events, and pre recorded events or educational opportunities. Virtual events can take the place of in-person events or be planned exclusively for online participation.

Virtual Conferences

Virtual conferences are a way to educate your audience, bring in new leads, and convert leads into customers. You can provide informational content alongside product or service updates and announcements, since you are the ones hosting the event. These industry-oriented virtual events offer lots of partner opportunities and chances to team up with thought leaders and other keynote speakers. Since conferences are industry events, they also give individuals the space to network and meet others in their field, which can easily be offered in a virtual format.

VIRTUAL CONFERENCES INCLUDE:
- Panels
- Microsites with speakers or recorded sessions
- Live conferences with breakout sessions
- Summits or industry conferences
- Training sessions
- Networking opportunities

One of the most anticipated debuts at the 2019 North whereas most companies come to the show with
Live Streamed Events vs Pre Recorded Events

Virtual events can be offered as live events that are either recorded or only available during the live viewing, or as pre recorded events available via a gated platform, requiring login or payment for access. Live streamed virtual events offer exclusivity or confidentiality for things like an album release event, a concert, or something you wouldn’t want viewed outside of the live viewing window. Pre recorded events available for a longer amount of time offer flexibility and are best for busy audiences that may want to spread their learning and viewing out and self pace.

When hosting a live event online, consider:

Where will I host my event online?

Will it be available after the live event ends?

When and how can we test the streaming platform?

How will my attendees network and collaborate?

Live Streamed Virtual Events

Live stream virtual events include live panels, live keynote addresses, and other live events like performances. When planning an online live event, it’s important to recreate live experiences like mingling and networking and meet and greets in the online space. Test your equipment and make sure all attendees have access to the schedule and networking opportunities ahead of the live stream. Incorporate social media into your strategy and always have a plan B in your back pocket. Live events don’t have to be customer or public-facing, try hosting your company’s next large meeting, like a virtual all-hands meeting, with live event technology.

Pre Recorded Virtual Events

Depending on your resources and audience, a live event may not be feasible or geared to your industry. Let’s say you are the only event marketer on your team— you may not be able to produce and execute a live event on your own. Pre recorded virtual events include keynote speeches, seminars, and interactive and engaging content that can be consumed by your attendees on their own time. You can even offer pre recorded content and include breakout conversations on Slack or other online platforms so viewers can collaborate and network at a time that is convenient for them. These online events are inclusive and open to everyone, no matter their time zone or physical location.
Now that we know more about events that are streamed live and the difference between live events and pre recorded content, let’s explore the difference between virtual events with live broadcasting versus video conferencing (which is also live video content.)

**Live Broadcasting vs Video Conferencing**

**Live broadcasts offer:**
- An intuitive experience for a one-to-many audience
- Enhanced visuals
- Better storage, sharing, and audience and file management
- More stability and scalability for large audiences

**Video conferencing, on the other hand:**
- Is optimized for individual (or one-to-some) video interaction
- Not as easy to access and secure for viewers
- Has limited quality A/V content
- Doesn’t include long-term storing or sharing
Hosting Virtual Events

As the host of a virtual event, it’s your job to make sure everyone can access the content, collaborate and network, and participate in all your event has to offer. Here are a few tips for hosting virtual events, both live and pre recorded.

Make sure you have a sufficient wifi connection.

Consider how you will field questions, either live or asynchronously.

Think about where your event will be hosted, how people will access your content, and whether you’ll charge for registration or require pre-registration.

Learn 6 things to consider on planning and executing a successful virtual event.

Virtual Event Audio Visual Requirements + Gear

Virtual events can take place at multiple locations, at a professional stage or sound stage, or from the homes of presenters around the world. The most important factors when planning for the audio visual or AV requirements for a virtual event are sound quality and video quality. Make sure your presenters have good wifi connection, a high quality web camera, and a backup plan in case any technology fails in the moment.

When live streaming from home, here’s some gear you may want to consider. Depending on your audience size and resources, your equipment may vary from personal webcam and laptop and $50 ring light to a full multiple monitor setup with a wireless remote and other professional accessories. No matter what, with the right planning and setup, your live stream can be successful.

Gear for live streaming events from home:

- A portable studio like the HD550
- A monitor (or several)
- An external USB webcam
- Laptops
- Wireless remote
- A recorder like the AJA Ki Pro Recorder
- A secure internet connection

Planning Your Virtual Event Budget

When planning the budget for your live streamed event or pre recorded virtual conference, you’ll need to plan for supporting your viewers throughout the experience to ensure everyone is able to connect and view the stream. This budget extends to areas like backup wifi, paying to conduct a test, and more.

Hardware

You may need to use an encoder to stream your event, or your live streaming platform might have one built-in. You will need a camera or computer with a camera, and may need a lighting kit or ring light.

LIGHTING
From beginner items like a ring light, natural light, or a simple light reflector to advanced items like the Aputure 300 d II with mini dome diffuser.

CAMERAS
Beginners can get by with just a phone camera but larger scale events will require a more robust camera like the Sony PXW-Z90. Learn tips on live streaming with a phone.

AUDIO
Try the Yeti Nano USB microphone to start, then upgrade to the Shure SM7B.

ENCODER
For live streamed events, you can use the encoder built in to platforms like Facebook Live, or use a separate encoder like the Livestream Studio HD550. Encoders convert live streamed video into a stream that people can watch on phones or laptops.
Software

Chances are, you already have a live streaming platform on your phone. Free consumer live streaming platforms like Facebook Live have come a long way, but if you’re looking for increased reliability and reach, you’ll likely want to upgrade to a professional-grade streaming service for your virtual event.

Professional live streaming services like Vimeo give you the ability to simulcast your stream to multiple social platforms, add polished graphics, set up a backup stream, embed video on your site, and more.

**WHEN CHOOSING YOUR STREAMING SERVICE, THINK ABOUT:**

- Streaming quality
- Privacy
- Engaging with your audience
- Accessibility (live and on-demand captions)
- Content management and ability to watch live events after the recording
- Customization and branding
- Analytics
- Distribution

If you’re live streaming your virtual event using social media like LinkedIn Live, Facebook Live, YouTube Live, or Twitter, check out Vimeo’s Guide to Live Streaming on Social Media.

Support

This might be someone for your own team or an industry consultant to make sure your event goes smoothly. No matter your event size, make sure you have a dedicated individual to field questions and concerns before, during, and after the virtual event.
Virtual Event Best Practices

When hosting a virtual event, there are special considerations to make sure your guests can get the most out of what you’re offering. Remember that attendees are taking time out of their busy lives and putting work on hold to dial in to your content. They want to engage, connect, and learn.

Create engagement opportunities during sessions

Use live polls and quizzes to interact with the audience

For live streamed virtual events, offer live Q&A sessions

Offer breakout rooms and networking opportunities, both available with video conferencing software

Include a place for event-goers to chat online before, during, and after the event
Examples of Companies Hosting Great Virtual Events

Many companies, including HubSpot, have hosted virtual events like Inbound Sales Day in the past. With this expertise, it wasn’t a huge jump to pivot traditionally in-person events like INBOUND to be completely immersive online experiences.

**INBOUND**
HubSpot’s INBOUND event includes time zone friendly live sessions, on-demand content that can be viewed at your own pace, and audio-only sessions to give your eyes a break from the screen.

**MozCon**
MozCon, a traditionally in-person experience, was online this year and offered virtual networking at multiple times throughout the day to give various time zones the chance to connect. This virtual event connected search engine optimization experts, agencies, content marketers, and others.

**Venture Café**
This Cambridge-based organization has offered a space for networking and office hours for entrepreneurs and other professionals. They transitioned their in-person networking to a virtual event and have had 4,000 virtual attendees.

**SaaStr Annual Conference**
SaaStr Annual is the largest global SaaS conference with 50,000 attendees. Their virtual edition included digital 1:1 networking opportunities, AMAs, and mentoring sessions, all online. The recordings from the event are all available online to the public.

**STREAMEO**
In June 2020, thousands of creators and entrepreneurs carved out 9 hours of their day to tune in to Streameo, Vimeo’s first-ever virtual event dedicated to growing every kind of video channel. It was a marathon day of learning, networking, and expert insights, spliced with little extras to keep the day fun—short films, a guided stretch break, even a cocktail-making class.
Promoting Your Virtual Event

When **promoting your virtual event or conference**, make sure to give your audience a clear picture of what they can expect. Your viewers’ time and money are valuable so they will want to know everything they can expect to get out of their registration.

Set expectations for what attendees will experience.

Make sure it’s clear if your content is live or pre-recorded, how long they will have access to the content, whether they will be able to ask questions, if there are breakout sessions or networking opportunities, and if they will have access to any exclusive content or materials.

Enable and encourage speakers and employees to promote your event.

Provide branded social templates and messaging for the event to make it as easy as possible for others to share and promote.

Use social media to promote your event and to facilitate networking among attendees.

Using a hashtag for your event makes it easy for attendees to engage in the conversation and find others. You can also offer a Slack group or Facebook group for event-goers to network and start threads of smaller groups.

Co brand your event, offer partnerships and vendors, and work with influencers in your industry.

Reach out to fellow industry organizations and partner up to reach their audience. Set the expectation up front if registrants can expect to hear from both brands.

Event marketers recommend recreating engaging experiences in the virtual space and considering your strategies right from the beginning of event planning.
# Virtual Event Checklist

## BEFORE THE EVENT
- ✔ Plan if your event will be live or pre recorded.
- ✔ Gather speakers and content, including comarketing partners.
- ✔ Plan your agenda.
- ✔ Outline your budget, including hardware, software, and support.
- ✔ Choose your equipment, tools, and event planning team.
- ✔ We also really stress -- practice, then practice some more! See tip #3 from [New to live streaming? 9 tips from our team.](#)

## DURING THE EVENT
- ✔ Offer attendee support and troubleshooting.
- ✔ Monitor your social media and interact with event-goers online.
- ✔ Stream your event using adequate lighting and streaming quality.
- ✔ Monitor your stream health for peace of mind. [Learn more.](#)
- ✔ Interact with attendees and create breakout sessions and networking opportunities.
- ✔ Engage viewers with chat, polls, networking opportunities, and more.

## AFTER THE EVENT
- ✔ Make your recording available for a certain amount of time or indefinitely to registrants.
- ✔ Review your live stream’s performance.
- ✔ Continue conversations on Slack, Facebook, Twitter, or other online networking sites.
- ✔ Gather feedback from event-goers.
- ✔ Encourage your speakers and employees to share the event even after it’s over.
