

FABRICS FOR NON-CERTIFIED COMMUNITY MASKS

In many European countries, citizen are obliged to use face coverings when entering public spaces. In most public situations, non-certified community masks offer some protection against the spread of the coronavirus.

There are various types of community masks available; systems build up with multiple layers or one layer masks. These different types of masks offer different levels of protection and comfort. Comfort levels are determined by the fabric specifications in terms of weight, breathability and softness on the skin. Protection levels are determined by the filtering function against aerosols and bacteria. When selecting a mouth mask for public environments, it is very important for users to understand various levels in protection and comfort.

Our fabrics can be used for non-certified community masks, within a layered system or as a single layer solution. The fabrics are breathable, soft, available in multiple weights and colours, and can be reused by washing up to 60°C.

FABRICS SPECIFICATIONS

Our available fabrics for community masks are lightweight, extreme durable, breathable, comfortable, provide long lasting looks and are suitable for repeated laundering.
