

# LTE SIM Card Connectivity

AFFORDABLE. RELIABLE. REDUNDANT.

Telesystem 4G LTE SIM Card Connectivity provides affordable and reliable cellular coverage for businesses who depend on internet connections for mission critical applications, or on a temporary or failover basis.

4G LTE

Single nationwide Point of Contact

Short Term Connectivity Options

Rapid Deployment

Low Cost Redundancy

Remote location connectivity

Connectivity is critical for any organization that depends on reliable internet access in order to function. WAN connectivity options, such as cellular networks, now also serve as a backup internet uplink in the event of a primary uplink failure or as a primary uplink for rural locations.

Telesystem is able to provide nation-wide Best Effort 4G/LTE data connection for supported hardware devices.

## Highlights

Single Appliance - Utilize integrated SIM card slots for edge devices and take advantage of LTE connectivity directly through a single appliance.

Minimize Service Disruption - LTE Failover Connections can be configured to ensure your business maintains connectivity to its most vital services during outages.

Optimized Coverage - Connectivity available through multiple major carriers (AT&T, Verizon, & T-Mobile)

Affordable data plans

- 100MB
- 1GB
- 5GB

## 4G LTE Readiness Checklist

- Checkout the "Opensignal" app available on Google Play or iOS App Store to check coverage and speeds available in your service area
- Check your application requirements to determine how much usage is appropriate for your needs
- Contact Telesystem to see how we can help
