

# Introducing Hysolate Workspace

Isolate corporate assets on user devices in minutes

Hysolate Workspace is the first solution enabling organizations to instantly create and deploy local virtual environments on any workstation and manage them from the cloud.

- Provides strong VM-based isolation
- Fully managed from the cloud (SaaS)
- Does not require installing an OS image
- Deployable on a mass scale in minutes

## THE CHALLENGE

The landscape of knowledge work is changing faster than ever. With remote work on the rise, employees and third parties (like contractors and partners) are using a broader range of corporate and unmanaged devices to access a wide variety of environments. Existing approaches like VPN, VDI, DaaS, MDM, or browser isolation are partial solutions, generally delivering insufficient security or a suboptimal user experience with high infrastructure costs.

## THE SOLUTION

Hysolate Workspace goes beyond the limitations of other approaches to unlock instant, secure productivity across the enterprise.

### Unlock Worker Productivity

- Allow full web access
- Users can install apps and extensions
- Full access to external devices (USB, printers)
- Enable further locking down of corporate OS

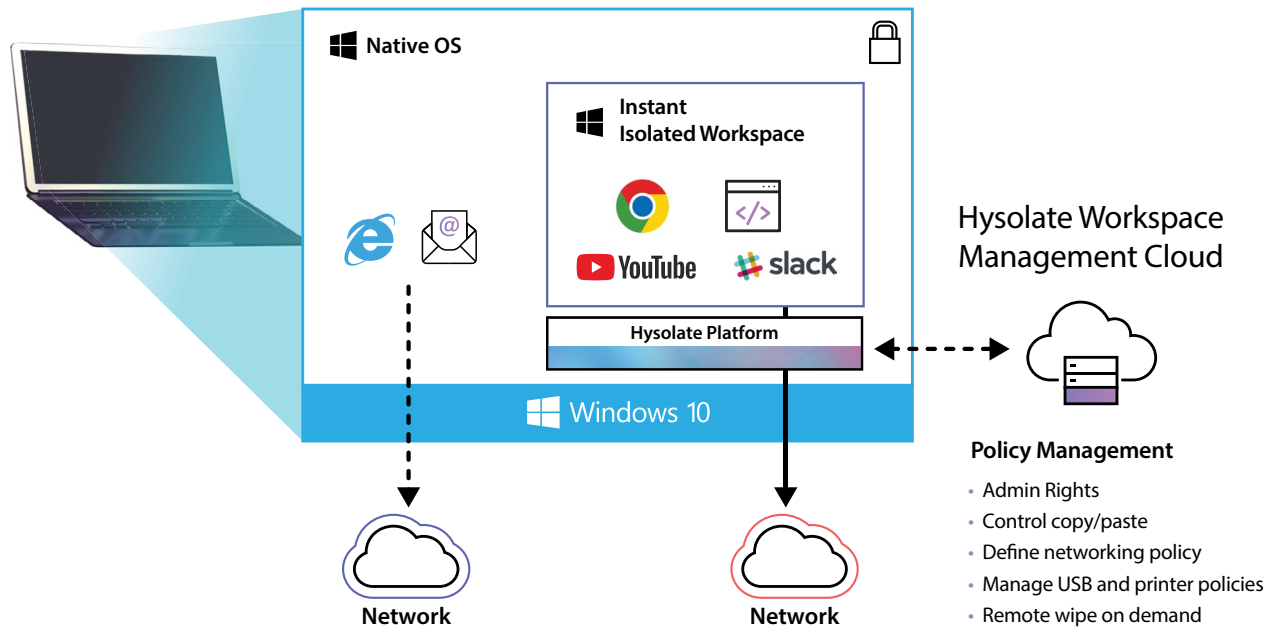

### Secure BYOD

- Isolated corporate VM
- Restricted network access
- Data loss prevention
- Device health checks
- Remote wipe/lock
- Privacy by design
- Fast and simple onboarding

Without compromising corporate security

## HOW IT WORKS

## BENEFITS

### Hyper-Isolated Security

VM-based isolation supported with fine-grained cloud-based controls, host compliance checks, and the option to pre-configure with a set of applications, networking policies, and security features.

### Rapid and Turnkey Deployment

Workspace can be installed and deployed in minutes, with no additional OS image or license required.

### Cost-Effective Scaling Across the Enterprise

Unlike VDI or DaaS solutions, Workspace comes with no backend infrastructure costs.

### About Hysolate

Hysolate pioneered software-defined endpoints, the most innovative way to secure user devices and boost user productivity. The solution seamlessly splits devices into segregated environments by leveraging the concept of isolation through virtualization. Customers include leading financial, technology and services enterprises worldwide. Hysolate's team includes IT and cybersecurity experts who are veterans of VMware, Microsoft, CyberArk and Unit 8200 (Israel's NSA).

The company was launched by Team8, a cybersecurity think tank, is privately held, and has headquarters in Tel Aviv and New York.
