5 picks from the Hysolate team that you should read NOW

Hi there,

Remember March of last year when your company started working remotely seemingly overnight? Most enterprises made some compromises when it came to either security or productivity to keep everything together.

But now, even as we go back to the office, the distributed workforce isn't going anywhere.

That's why we put together a checklist for IT and security teams to figure out the best way for them to set up IT infrastructure for the long term.

The checklist includes:

- ✓ 6 User Productivity Considerations
- ✓ 5 Security Risk Factors
- ✓ 10 Manageability Concerns

**PS:** Did you register yet for our March 17th webinar with the CISO of Celsius Networks? We'll be discussing unique threats and challenges faced by financial sector security teams. [Register here](#)

## System Hardening Guidelines for 2021

**Why you should read it now:** Most system hardening 'best practices' involve locking down the user's OS. But blocking critical apps that employees need is not a good idea. Here's a system hardening guide that's meant for the real world.

## Rethinking Cybersecurity Culture

**Why you should read it now:** Dispersed workforces means that cybersecurity culture needs to change. It's time to start focusing on the unique risks faced by companies in the 'new normal', including managing unsecured devices (BYOD) and failing to update passwords.
