

The COVID-19 epidemic has caused a crisis in health care and exacerbated the difficulties faced by individuals with developmental disabilities such as autism spectrum disorder. The crisis has been especially challenging to individuals from underrepresented minority populations.

You are about to view two videos developed to assist you and other health care providers to interact therapeutically with people on the autism spectrum who have been exposed to SARS-Co-V 2.

Video 1: Assessment of an individual from an underrepresented minority group who is diagnosed with autism spectrum disorder and was exposed to Covid-19 but does not have symptoms.

LINK to: [Video 1 ASD. No Symptoms of Covid 19](#)

Link to EVALUTION: Select [Evaluation Survey](#) or copy and paste this link into the address bar of your web browser. [Please take 5 minutes to evaluate the video]

Video 2: Assessment of an individual from an underrepresented minority group who is diagnosed with autism spectrum disorder and experiencing symptoms of Covid-19.

LINK to: [Video 2 ASD. Symptoms of Covid 19](#)

Link to EVALUTION: Select [Evaluation Survey](#) or copy and paste this link into the address bar of your web browser. [Please take 5 minutes to evaluate the video]

Thank you for taking the time to view this virtual encounter. We hope that you will find them useful in your practice. You may copy and save these links to view the encounters again or to share with your colleagues.
