

Censys Data

THE PROBLEM

Tracking Threat Actors requires broad, up-to-date, and easily-pivotable Internet-wide scan data. While OSINT tools like nmap, mass scan, and zmap are great (especially for one-offs), they often require significant overhead to manage at scale.

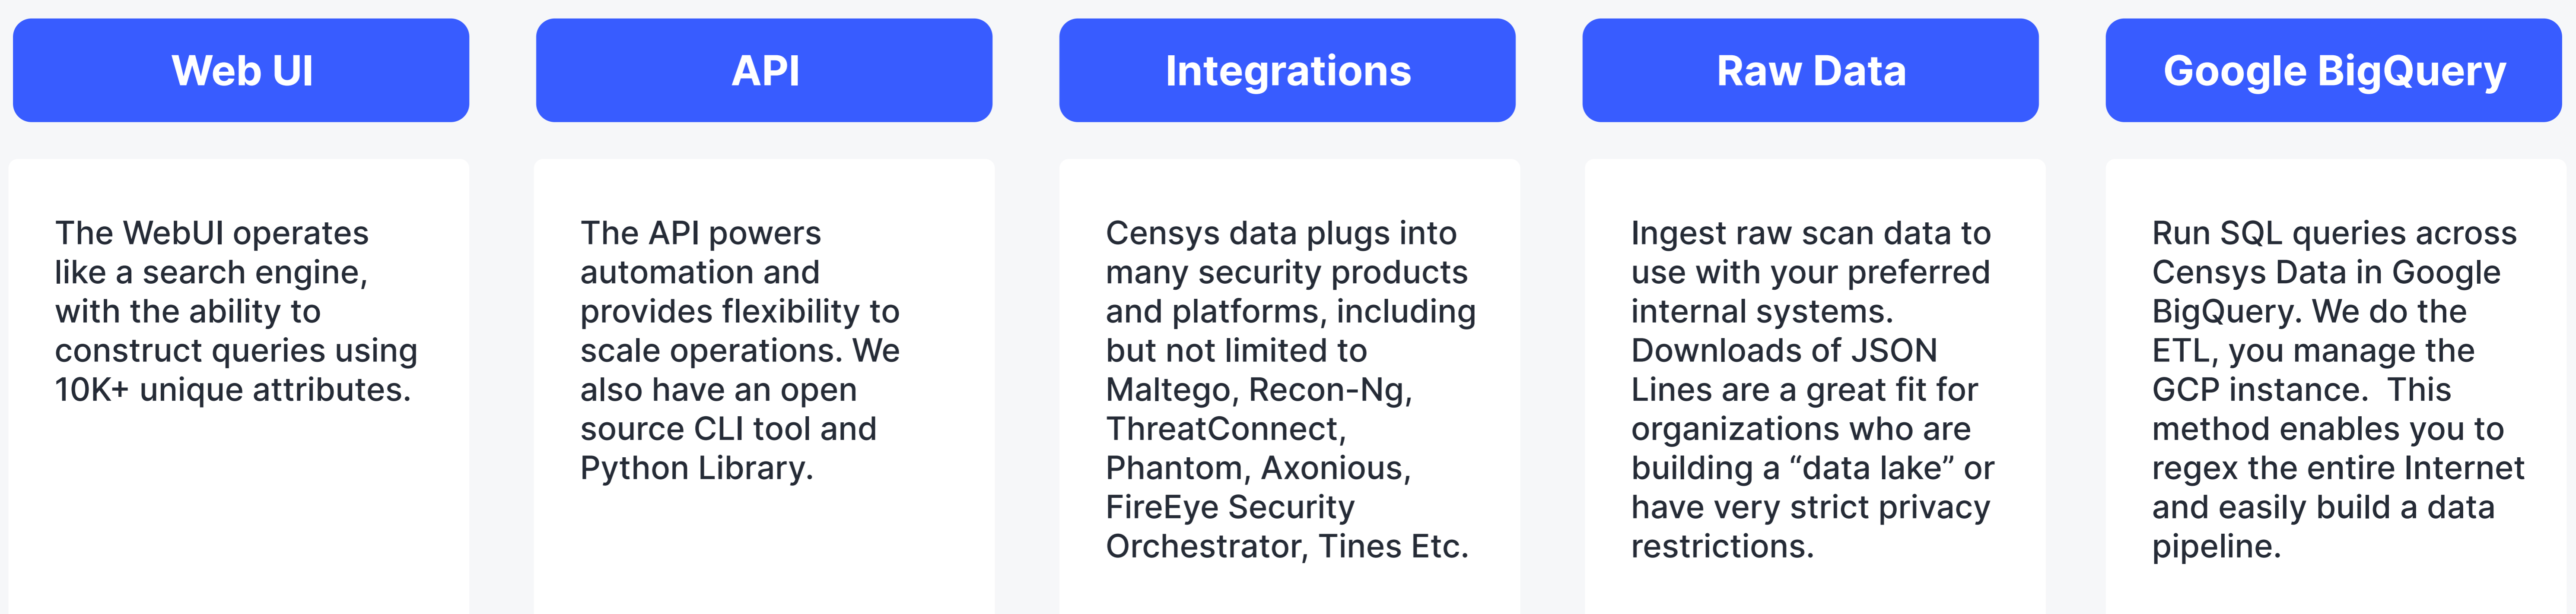

THE SOLUTION

The founders of the Zmap Project created Censys to empower organizations with the best visibility into threats with the most reliable, fresh, and highly-indexed Internet-wide scan data.

THE BEST DATA IN THE INDUSTRY

INGEST THE DATA IN THE FORMAT THAT BEST SUITS YOUR TEAM

ENHANCE WITH OTHER CENSYS PRODUCTS

Censys Attack Surface Management Product

If you're leveraging Censys Data to find assets belonging to your organization, Censys can help! We have an Attack Surface Management Platform that helps organizations understand their external exposures.
