

Censys Attack Surface Management

THE PROBLEM

Keeping track of publicly exposed assets can be difficult, especially as companies migrate to the cloud, workforces become more distributed, and companies acquire security debt from mergers or acquisitions.

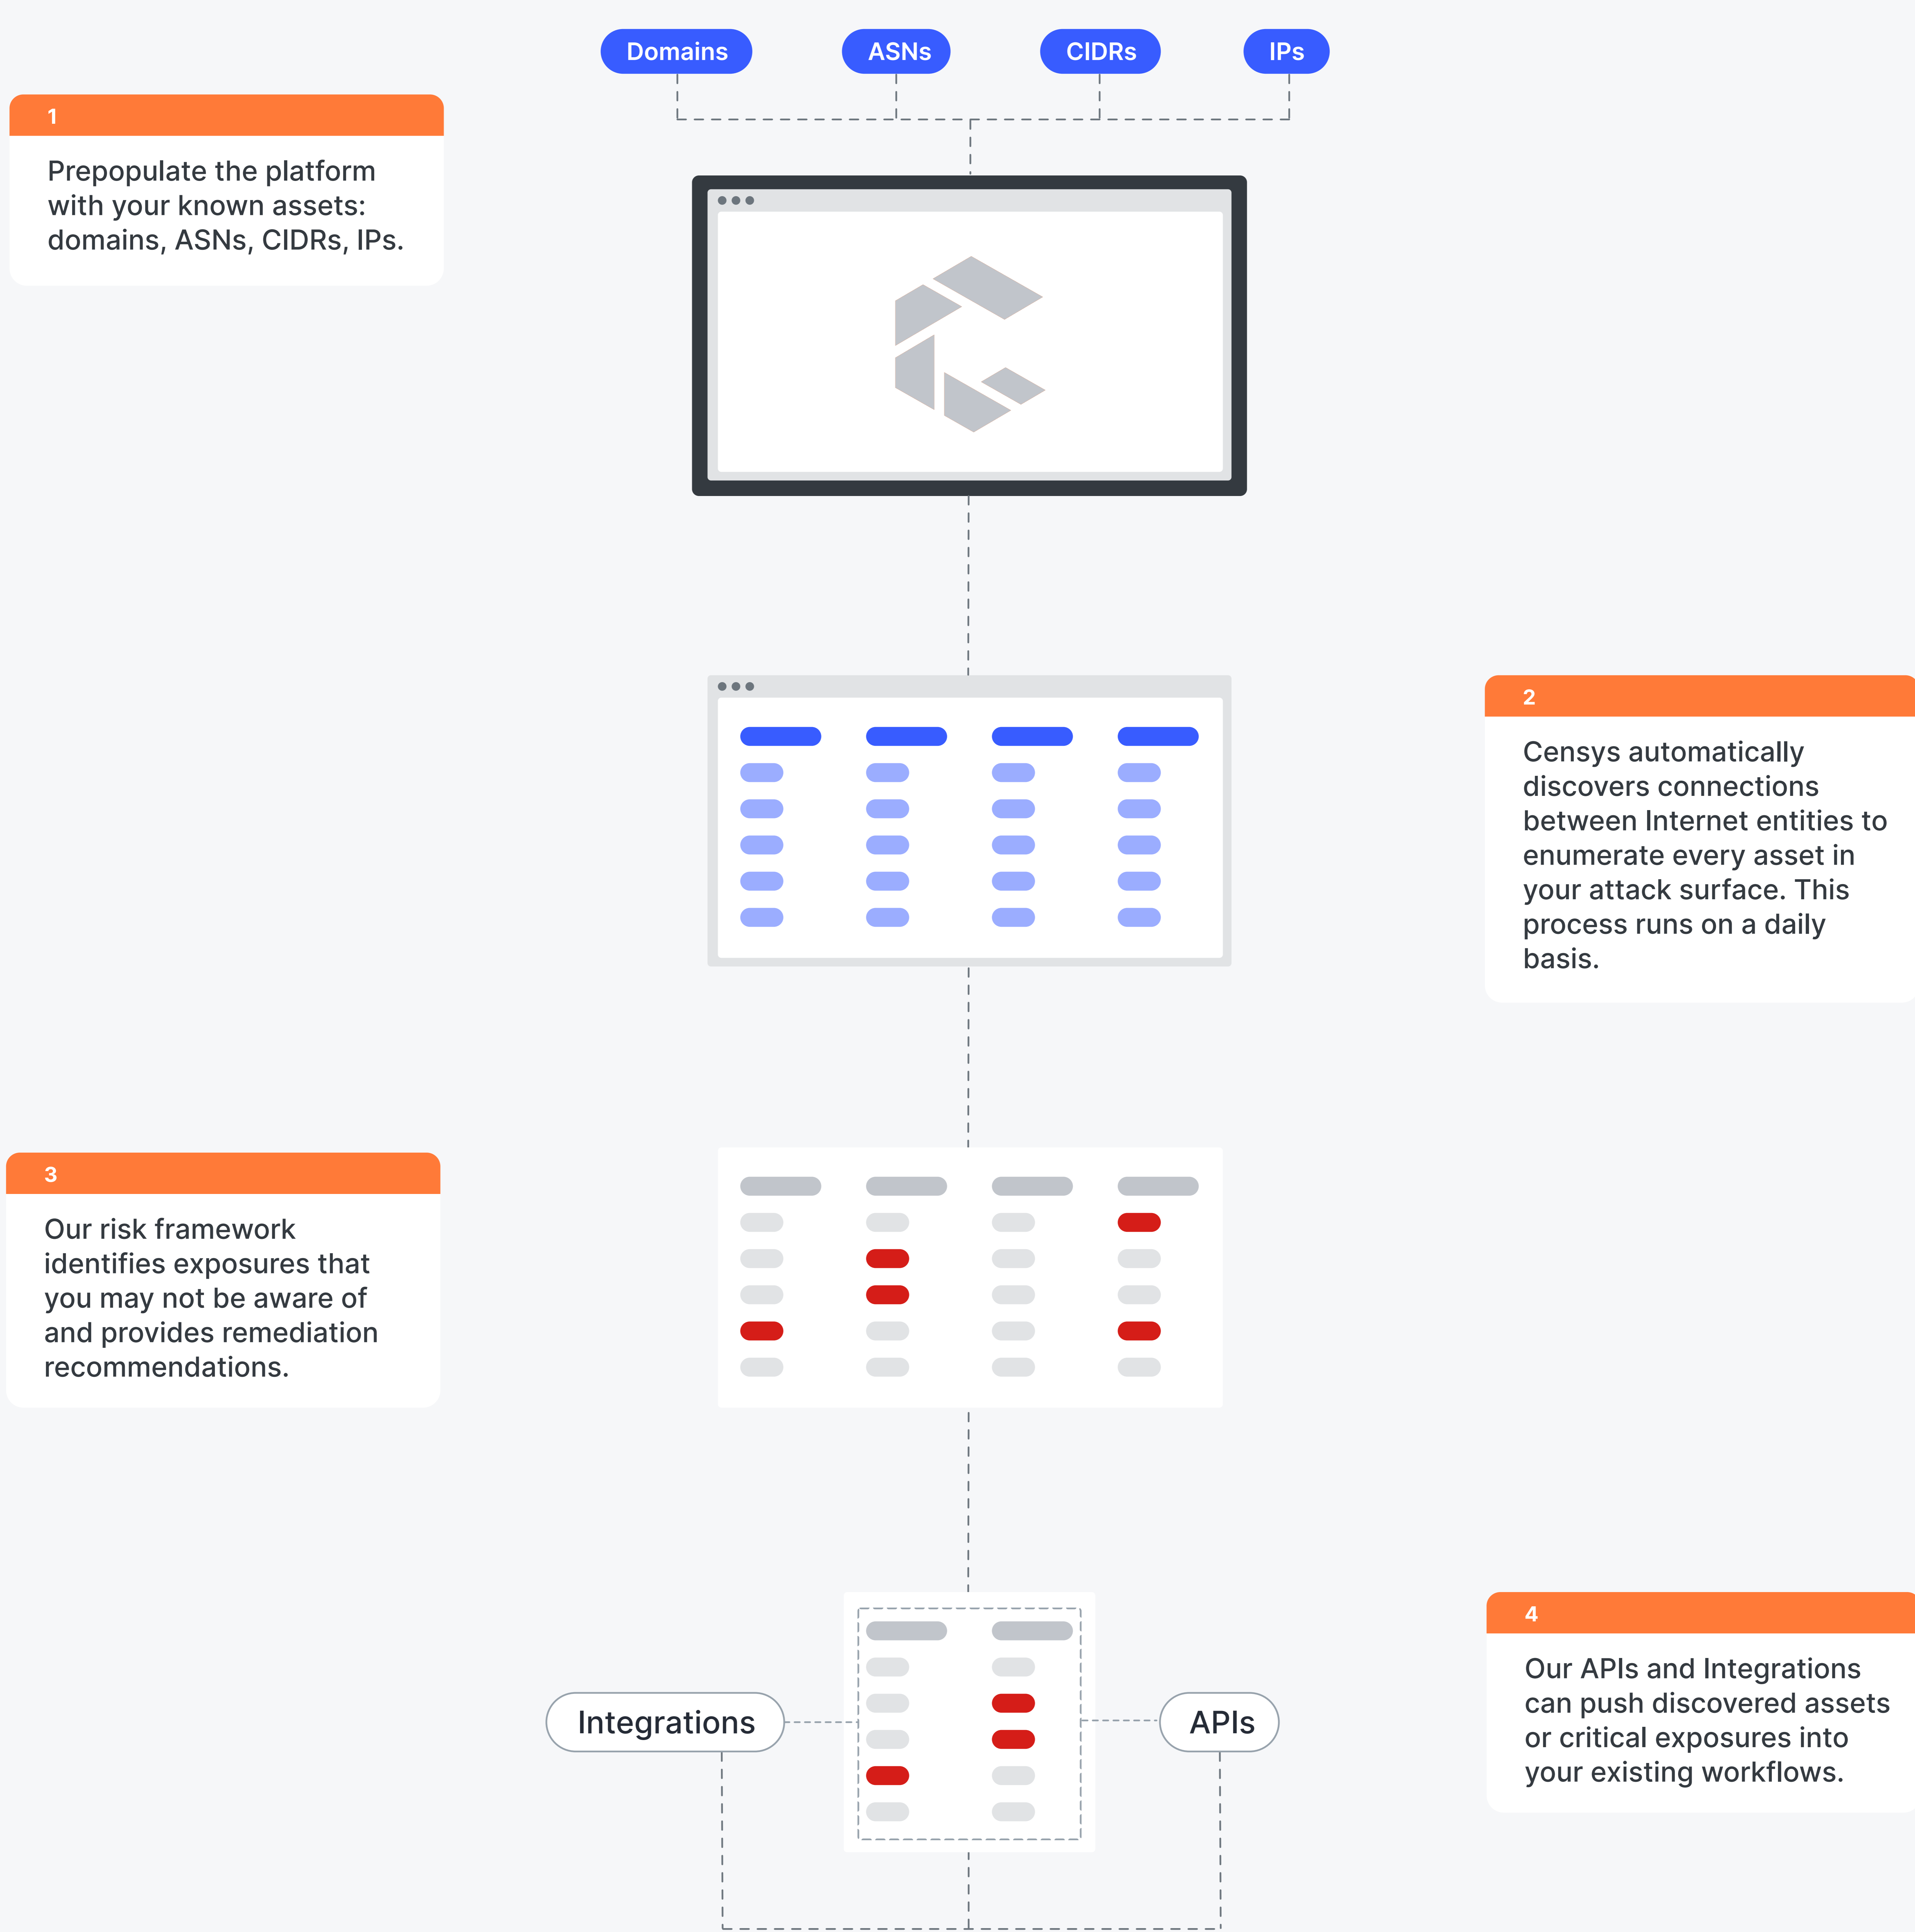

THE SOLUTION

Censys helps discover, manage, and remediate risks in your digital landscape. The founders of the Zmap Project created the Censys Attack Surface Management Platform to help organizations understand their external exposures with the most-trusted Internet-wide dataset.

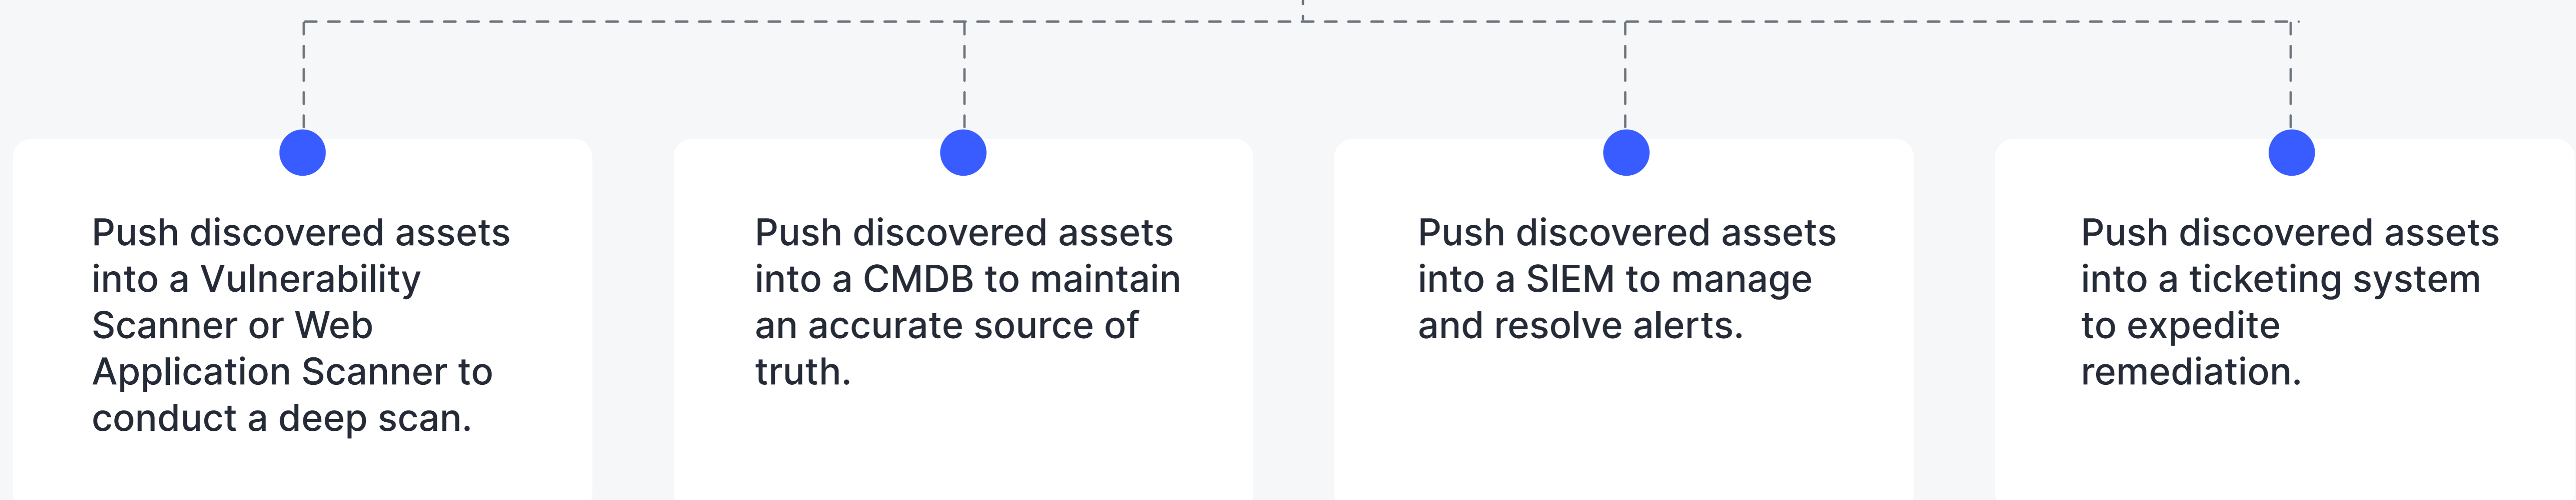

POWERED BY THE BEST DATA IN THE INDUSTRY

HOW OUR ASM PLATFORM WORKS

PLUG INTO EXISTING WORKFLOWS

ENHANCE WITH OTHER CENSYS PRODUCTS

Cloud Connector

Push your cloud IPs into Censys to get daily scan updates on exposures in your known cloud environments.

Home Network Risk Identifier

Push IPs from your VPN logs into the Platform to understand exposures on distributed workforce networks.

Censys Global Dataset

Empower Threat Intel teams with the industry's best Internet-wide scan data to identify and track threat actors or to speed up SOC playbooks.
