emissions and increase
business resilience.**

Save money, reduce emissions and increase business resilience

Transition your business to smarter, cleaner, more independent wind energy today

Energy is the backbone of modern business. We all depend on reliable, cost effective access to power to create value, delight customers and grow.

Some businesses rely on off-grid power systems to provide critical baseload power – often at an economic and environmental cost.

Counting the cost to business

Fuel transport & site access costs

Fluctuating costs of diesel

Rising carbon emissions

Corporate reputation

Balancing energy portfolio

Ageing energy assets

There is a better way

Diffuse Energy delivers clean, green and reliable power when you need it, where you need it, affordably.

Our compact, robust and powerful wind turbines allow you to adapt your existing infrastructure into green energy power plants, overnight.

No upfront hardware costs and a lifetime service guarantee, makes your transition to small wind easy so you can grow confidently.

“Australian businesses are making the switch to permanent sustainable operations because their customers and public expect it.”

Why small wind?

Small wind is the ideal way to produce clean, reliable and renewable power in off-grid locations.

Here's why small wind works

Has a greater output than solar PV, when appropriately sited

Is complementary to existing solar PV generation

Is able to generate at night and during wintry conditions

Keeps batteries trickle charged, improving cycle life and battery wear and tear

Reduced theft issues compared to solar PV

Our innovative turbines plug seamlessly into existing infrastructure to convert your operations from diesel power generation to cheaper, more independent and environmentally friendly wind power.

Take the risk out of your renewable technology investments

No one wants to be locked into technology that may be superseded or quickly become obsolete.

That's why when you buy from us, we carry the hardware cost while you reap the rewards. Our monthly subscription service provides access to a dedicated team of wind-energy experts, working with you to ensure your system performs at the highest possible standard for as long as you need it.

“We’ve revolutionised the way you invest in renewable technology”

0\$ up front

A capital free solution that reduces operating costs and increases the sustainability of your business from day one.

Project design

Every microgrid site is unique. We work closely with you during the project development to ensure a smooth delivery with maximum power generation.

Ongoing support

Our wind turbines are designed to withstand 20+ years of service. In the unlikely event of a component failure, we will send out replacement components free of charge.

Worry free

Don't worry about diesel fuel cost fluctuations. Don't be left stranded by internal workforce turnover or loss of institutional knowledge.

Make the switch to smarter, smaller wind for improved energy resilience.
