

Academic Reports

A system that integrates assessment data, comments and state-based curriculum outcomes for streamlined academic reporting.

Assessment and reporting are an essential part of quality teaching and learning. Sentral Academic Reports ensures data integrity by combining all aspects of reporting into one comprehensive set of tools.

The capability to import state-based curriculum outcomes and learning progressions allows reporting to accurately track student and cohort progress; efficiently meeting regulatory requirements. This significantly reduces administrative burden, as teachers can be confident of creating teaching programs that properly correlate with student reports.

Markbook integration enables faster and more accurate transfer of assessment results directly into Academic Reports. This saves the burden of double entry and reduces the potential for error.

With advanced comment bank features, Sentral Academic Reports enables teachers to create meaningful comments that can be applied in various situations. This saves time and also allows teachers to engage more deeply on comments that require a higher level of detail or complexity.

The integrated design of Sentral Academic reports means that teachers and administrators can address the complex landscape of academic reporting with greater confidence and efficiency.

Key Benefits

Integrates state-based curricula

Reduced burden

Increased accuracy

Tracks learning progressions

Markbook integration

Reporting Periods

Easily create new reporting periods for the whole school or specific year groups. Save significant time and administrative burden by performing simple roll overs from previous reporting periods. Sentral Academic Reports maintains a history of previous reporting periods that can be easily referred back to if needed.

Assigning Teachers, Students and Classes

Sentral Academic Reports provides a simple and intuitive interface for administrators to assign teachers to classes. Easily see how classes are assigned to year groups and which teachers are assigned to classes.

Assessment Schemas

Assessment schemas give administrators broad oversight and control over the reporting structure of each year group or stage. Specify which scales are used, and the strands and outcomes to be assessed for each subject. Other details such as comment types and length can also be determined. Classes assigned to a schema are easily specified and identified.

Report Templates

Sentral Academic Reports features advanced template capability providing simplicity and consistency in presenting and distributing reports. Schools can configure reports to their desired look and feel to create a polished and professional reader experience for parents and caregivers.

Markbook

With the potential to integrate Marbook, Sentral Academic Reports can receive assessment data directly from class or faculty markbooks. This avoids double data entry, reduces error and greatly saves time for teachers in recording and organising assessment data.

Comment Banks

Create and import comment banks to avoid repetitive tasks for standard commenting situations. Organise comments into categories and segment by comment type for quick application of the appropriate comment. Comment banks free up valuable time for comments that require more detail or in-depth analysis of student performance.

**Reduce
administrative
burden and improve
quality with the
streamlined
processes offered by
Sentral Academic
Reports.**
