

Activities

A system that efficiently coordinates the wide range of curriculum and co-curricular activities in your school.

Schools are busy places with a diverse range of activities taking place on any one day. Learning is no longer restricted to the classroom and may take place in a variety of contexts. Together with the mix of co-curricular activities offered in most schools, this presents the need for an efficient system to manage the complex nature of today's daily routines.

Sentral Activities offers a highly configurable structure for organising the events and activities relevant for any school. Administrators can organise activities logically with user-defined categories, creating a centralised environment for managing all activity related matters.

Staff can easily be assigned to various roles and responsibilities within each activity, with a system for creating and managing associated risk assessments integrated into the module. This ensures appropriate supervision and compliance for each activity.

An intuitive and configurable home page provides quick oversight of scheduled excursions and activities and a summary of activities assigned to each staff member. Maintaining transparency of past, current and upcoming activities assists teachers and administrators in efficiently managing their daily routines.

Key Benefits

Efficient coordination

User-defined categories

Highly configurable

Improved risk assessment

Easy oversight

User-defined categories

Create unlimited categories to suit all manner of activities and co-curricular events within your school; excursions, incursions, sports, clubs etc. Assign coordinators for each activity and specify the appropriate approval workflow. The point scores awarded to students for participation can also be nominated.

Centralised venue management

Easily organise venues within your school into logical groups. This enables staff from varied faculties to easily identify all venue types and locations. Planning for future activities is made simpler with quick oversight of available spaces and resources.

Cycles

Using built-in cycles, or custom cycles, administrators can easily cater for a diverse range of activity frequencies. Manage occurrences by specifying the appropriate cycle; weekly, semester, annual etc.

Comprehensive approvals and risk assessments

Activity approvals and risk assessments are of critical importance. Sentral Activities enables administrators to create detailed approval workflows to ensure all relevant information is provided. Comprehensive risk assessments are easily created using the intuitive template, which can then be modified and copied for future use removing time consuming repetition.

Letter Templates

Sentral Activities allows administrators to easily generate clear communication with an intuitive letter template interface. Quickly create informed consent letters and tear-off permission slips using auto-text fields.

Student Portal

Save time by allowing students to self-register for activities via the student portal. Administrators can specify the number of selections available to students and the time period in which selections can be made.

**Improve efficiency
and save time
by streamlining the
organisation of
diverse activities
within a centralised
system.**
