

Standard Mapping from Whistic

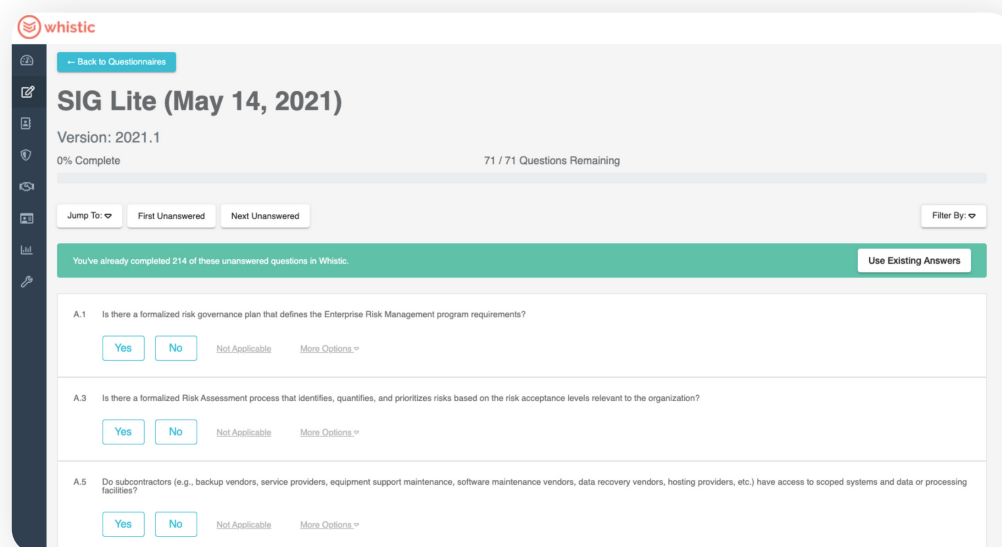

Strengthen your Security Profile in a fraction of the time

Building out a robust security profile doesn't have to be time-consuming—you're probably further along than you think. With Whistic's Questionnaire Mapping capabilities you can easily take the work you've done completing one questionnaire and reuse it to get a head start on another.

Once you have a completed questionnaire in your account, importing responses into a new standard is as simple as pushing a button. And with each subsequent standard you add to your profile, the easier the next one will be to complete.

How it works

- 1 Create the new standard questionnaire.
- 2 Click "Import from Completed Questionnaire."
- 3 Select the questionnaire that provides you the most coverage.
- 4 Repeat as much as necessary. Ex: If a SIG provides the most coverage, you select that one first, then you can select the best option and import those answers.

The screenshot shows the Whistic interface for a questionnaire titled "SIG Lite (May 14, 2021)". The version is 2021.1 and it is 0% complete with 71 out of 71 questions remaining. A green banner indicates that 214 of the unanswered questions in Whistic have already been completed. A "Use Existing Answers" button is visible. The questionnaire content includes three questions:

- A.1 Is there a formalized risk governance plan that defines the Enterprise Risk Management program requirements?
- A.3 Is there a formalized Risk Assessment process that identifies, quantifies, and prioritizes risks based on the risk acceptance levels relevant to the organization?
- A.5 Do subcontractors (e.g., backup vendors, service providers, equipment support maintenance, software maintenance vendors, data recovery vendors, hosting providers, etc.) have access to scoped systems and data or processing facilities?

Note: You can import answers from every questionnaire you've completed.

Tip: Before submitting the questionnaire to your customer, review the answers to ensure they are still up-to-date and relevant.

Instantly map across all Industry Standards

The ability to easily map with the Whistic Standards library helps you get more mileage out of the work you are doing and also allows you to more easily meet the requirements of customers that may subscribe to various Industry Standards.

Currently, we have mapped multiple versions of the SIG, VSA, CAIQ, HEVCAT, ISO 27001, CIS, HIPAA, and PCI.

	SIG	VSA	CAIQ	HECVAT	ISO 27001	CIS	HIPAA	PCI
SIG		●	●	●	●	●	●	●
VSA	●		●					
CAIQ	●	●		●	●	●	●	●
HECVAT	●		●					
ISO 27001	●		●					
CIS		●			●			●
HIPAA	●		●					
PCI	●		●		●			

Build a Whistic-Ready Profile

The more standards you have in your Whistic Profile, the more likely you'll be able to answer customer concerns about your security posture on the first share. And Questionnaire Mapping simplifies the task of building out those standards.
