

A woman with long dark hair, wearing a black sleeveless dress, stands in a modern lecture hall. She is gesturing with her hands as if speaking. In the background, there are two large digital screens. The screen on the left displays several graphs and charts. The screen on the right shows a man in a blue sweater pointing at a whiteboard with a diagram. The room has blue chairs and white tables. The foreground shows the back of a person's head with curly hair.

Connect your learning spaces over real-time video

Extend the reach of your lecturers and give every student access to live education

What is Vscene?

Vscene is a video platform that recreates the natural learning experience. We equip learning spaces with a virtual learning environment that supports live communication and engagement. A Vscene video session allows you to view your remote learning space, it allows you to speak directly to your remote students, and it allows them to talk back to you. All in real-time.

The Vscene platform, combined with our teaching and learning space solutions, supports shared teaching and learning across multiple locations. This means you can share one lecturer across campuses without your remote students feeling short-changed.

So, whether your students are in the same room as the lecturer, or watching remotely on a screen, they'll have the same experience. They can see, hear and talk to each other as usual – as though they're in the same room. By replicating the live learning experience, Vscene makes remote learning truly interactive.

We equip learning spaces with a virtual learning environment that supports live communication and engagement”

Why Vscene is right for you

Developed for education

Vscene is the only platform created specifically for the education sector. Our developers have included specialised features and capabilities with students in mind, to improve communication and encourage engagement in the learning environment.

Comprehensive security

Our rigorous security policies meet and exceed all safeguarding and access requirements, using servers in government-approved data centres. Whether your students are connecting from campus or home, it's a system you can rely on.

Unbeatable quality, unbeatable price

You'll get the highest quality immersive video at a realistic price point. When it comes to fast frame rates and high-definition video, Vscene is hard to match. And our pricing plans are all-inclusive with no hidden costs.

Replicates the lecture theatre

Vscene brings learning to life for remote learners. It allows lecturers and students to participate in natural, real-time interaction. Whether you want to call on students at the back of the room or scribble an explanation on a whiteboard, it's the full learning experience.

Walk-in-and-teach technology

Our learning and teaching space solutions will transform your setup. You can just walk into the room and start teaching. Forget about connecting equipment or remembering log-ins. The technology is built into the teaching space, so you simply need to turn up and teach. It really is that user-friendly.

Hybrid learning solution

Vscene supports a hybrid learning model, offering both synchronous and asynchronous learning solutions. You can record every session in high-quality video, ready to be played back whenever required. Students can benefit from real-time teaching and then learn offline in their own time.

Full VLE integration

The Vscene platform will integrate smoothly with your existing VLE setup. It doesn't compete with your VLE system, it enhances it. Think of it as the cherry on top. Vscene will work alongside all your current systems, running in conjunction with your existing IT arrangement.

Teaching and Learning Space Solutions

Enhance your Vscene experience with our teaching and learning space solutions. From small learning hubs and teaching pods to larger set-ups, we offer a wide range of high-tech screens, cameras and audio equipment to work with our platform. We will install and maintain these solutions for you, ensuring you have a seamless teaching experience every time

We offer a wide range of high-tech screens, cameras and audio equipment”

Vscene Solutions

▷ Teaching Pod

This compact teaching pod is designed for lecturers to deliver remote teaching to multiple learning spaces, or multiple desktop users.

▷ Classroom

The classroom setup is designed to deliver the typical learning experience for students, just with a remote lecturer rather than one who is physically present.

▷ Classroom Dual

This dual-purpose setup is ideal for larger lecture theatres where you want to offer both remote teaching and learning provision.

▷ Classroom Hub

Already have cameras set up in your seminar rooms and lecture theatres? The classroom hub will integrate smoothly with your current camera setup.

▷ Bespoke solution

Do you have a larger lecture hall to work with? Or a suite of seminar rooms to be connected remotely? We can provide a bespoke solution for every setup.

▷ Teaching Wall

The Teaching Wall delivers ultra-high resolution video with students distributed across multiple screens to provide a truly immersive learning environment that supports real-time and engaging interaction; whilst maintaining the crucial 'human experience' of learning.

You're in good company

We're connecting learning spaces in colleges and campuses across the world. Vscene is used and trusted by over 2,000 educational and research organisations. Here's what some of our satisfied customers have to say:

“ Vscene provides us with an all-in-one remote teaching solution. The platform enables real-time collaboration between universities, institutes, and remote students, removing the physical barrier from the classroom experience.”

Phelim Lunny, Dublin Dental University Hospital

“ Distance doesn't exist with Vscene. 100% pass rate in our Functional Skills English - the results speak for themselves!”

Joanne Byrne, Petroc College

“ Compared to the alternative of having lecturers travel to eight institutions, the benefits of Vscene are so great that the school simply couldn't function without it!”

Dr Christian Killow, SUPA, University of Glasgow

“ We wanted a solution that would enhance rather than detract from the learning experience and outcomes of students. Vscene ticked our particular boxes.”

Dan Pearson, USP College
