

## Introducing the **Teaching Wall**

Bringing engagement and  
interaction back into remote  
learning.

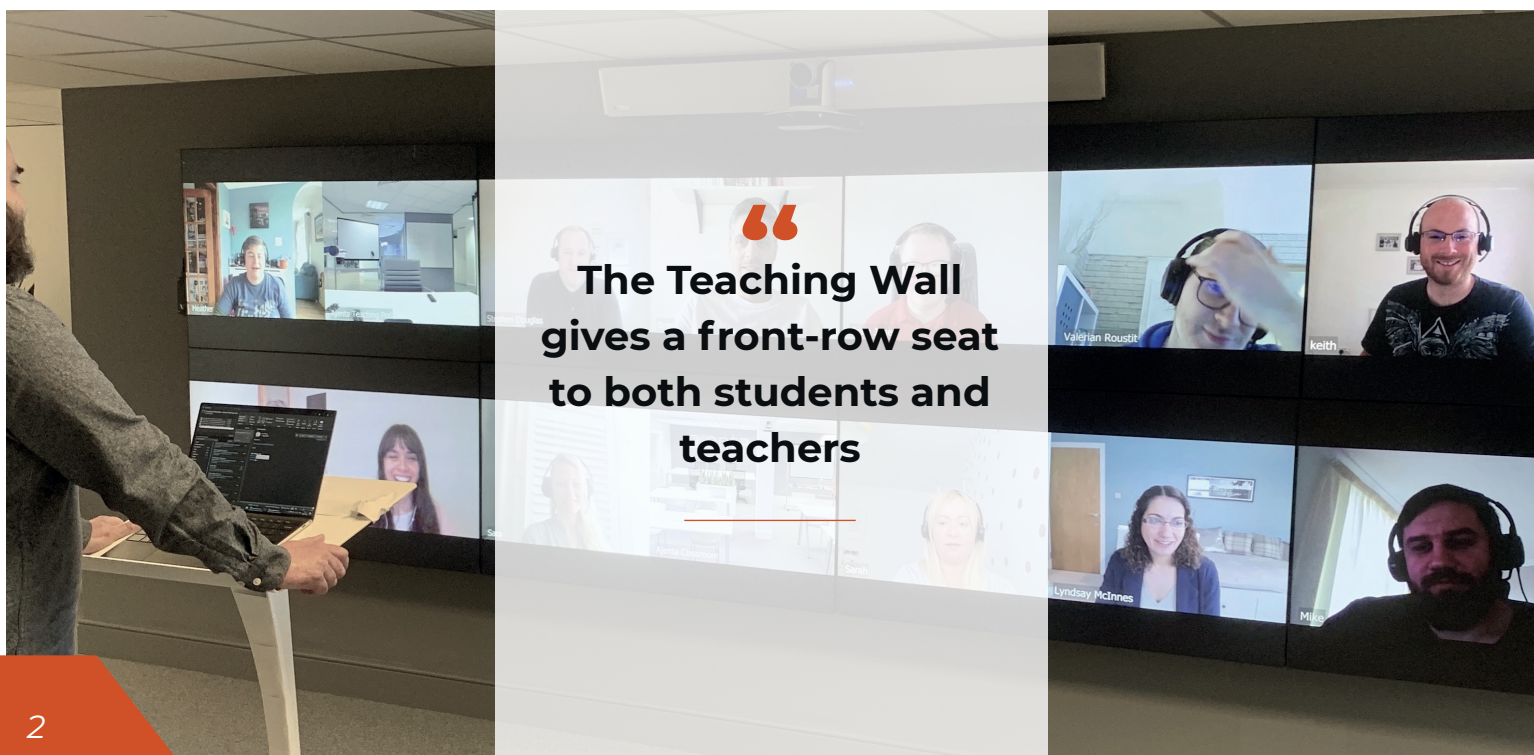

# Welcome to the Teaching Wall

Welcome to a new era of active learning. The Teaching Wall is a wall of screens that gives a front-row seat to both students and teachers. It allows you to view your remote class as clearly as if they're in the same room. With life-size images on screen, you can interact and engage with your remote learners without the usual barriers of technology.

It supports the whole class experience, bringing engagement and interaction back into remote learning. Via the Teaching Wall, your remote students can raise a hand as easily as the students who are physically present. And teachers can quickly identify those essential non-verbal cues of students who need some extra help. Spot them scratching their heads, looking confused, or getting

distracted, and step in before they fall behind.

In essence, the Teaching Wall helps to humanise the remote learning experience. It allows both teachers and students to interact in a completely natural manner, with all the non-verbal cues and nuances of everyday behaviour.

## Developed for Further and Higher Education

The Teaching Wall uses the Vscene video platform to recreate the natural learning experience. Created specifically for the education sector, a Vscene video session supports live communication and engagement in real-time.

- ✓ **Real-time interaction:** Your students can see, hear and talk as usual, whether they are in the same room as the lecturer or watching remotely on screen.
- ✓ **Easy to use:** The Vscene platform will integrate smoothly with your existing VLE setup and offers the ultimate simplicity of walk-in-and-teach technology.
- ✓ **Hybrid learning:** Vscene supports a hybrid learning model, allowing you to record every session in high-quality video. Students can then benefit from real-time teaching and learn offline in their own time.
- ✓ **Totally secure:** With rigorous security policies in place, the Vscene system meets all safeguarding requirements.

## Supporting the Whole Class Experience

---

In an ideal world, we would have all students together in the same classroom. But, sadly, we don't live in the ideal world. So, the Teaching Wall has been developed to give you the next best thing. Rather than relying on a small screen in the corner of the room, the bank of screens provides a natural extension of the learning space.

- ✓ **Teach naturally:** Teachers can continue to deliver in their usual manner. They can walk around the room and speak naturally without the need for microphones.
- ✓ **Interact easily:** Teachers can interact with their students, whether physically present or remote, in a natural way. Whether your learners are raising a hand or gazing out of the window, they'll be quickly noticed.
- ✓ **Share content:** They can share content via laptops, touch screens or even smartphones, safe in the knowledge that every student can see clearly.

**Bring live education to large numbers of students, wherever they are based**

---

# The Economical Solution

The good news is that the Teaching Wall isn't cost-prohibitive. With a price point set well below that of our competitors, we aim to reduce entry barriers and open up live education to more students.

**Cost-effective pricing:** The complete Teaching Wall package starts at just £11,500 for the 4-screen solution, which includes all screens, cameras and audio.

**Flexible setup:** The Teaching Wall can be adapted to suit your space and needs; choose from 4, 8, 12, 16 or 20 screens, or more if required.

**The pandemic has accelerated digital transformation for everyone, and Teaching Wall brings resilience, adaptability and ease of use to a new blend of digital and face-to-face interactions that will deliver many educational benefits.**

## Other Vscene Solutions

---

### ▷ *Teaching Pod*

This compact teaching pod is designed for teachers to deliver remote teaching to multiple classrooms, or multiple desktop users.

### ▷ *Classroom*

The classroom setup is designed to deliver the typical classroom experience for pupils, just with a remote teacher rather than one who is physically present.

### ▷ *Classroom Dual*

This dual-purpose setup is ideal for larger classrooms where you want to offer both remote teaching and learning provision.

### ▷ *Classroom Hub*

Already have cameras set up in your classrooms? The classroom hub will integrate smoothly with your current camera setup.

### ▷ *Bespoke solution*

Do you have a larger space to work with? Or a suite of rooms to be connected remotely? We can provide a bespoke solution for every setup.

# Get in touch
